

Identifying New and Emerging Issues Related To
The Conservation and Sustainable Use Of
Biodiversity

Any countries host refugees for protracted periods experience long-term economic, social, political, and environmental impacts (genetic resources, species, and ecosystems). From the moment of arrival, refugees may compete with local citizens for scarce resources such as water, food, housing, and medical services. Their presence increases the demands for education, health services, infrastructure such as water supply, sanitation, and transportation, and also in some cases, for natural resources such as grazing and firewood.

So we would like to identifying new and emerging issues related to the conservation and sustainable use of biodiversity evidence of the absence or limited availability of tools to limit or mitigate the negative impacts of the identified issue on the conservation and sustainable use of biodiversity:

- Collating reliable data on the environmental degradation and forced migration (conflict & terrorism) pressures in Middle East region.
- Promoting the identification and mapping of potential environmental degradation made by forced migrating (conflict & terrorism) in Middle East region.
- Enhancing knowledge of livelihood, successful adaptation, preparedness and coping strategies used by local populations in Middle East region.
- Supporting research which will enhance understanding of the relationship between

environmental degradation and conflict / terrorism in Middle East region.

- Commissioning research on potential governance models for areas experiencing degradation and migration pressures in Middle East region.
- Promoting and coordinating policy responses to environmental degradation and forced migration in Middle East region.
- Adopting proactive development policies to address the potential migratory made by forced migrating (conflict & terrorism) in Middle East region.
- Strengthen the corporation of strategies in programs and projects adaptation and sustainability in Middle East region.
- Supporting sustainable adaptation measures by refugees (locally and regionally) in Middle East region.
