V. Conclusion .................................................................... 19
I. Introduction

1. The members of the United Nations Permanent Forum on Indigenous Issues selected the following theme for its ninth annual session: “Indigenous peoples: development with culture and identity: articles 3 and 32 of the United Nations Declaration on the Rights of Indigenous Peoples”. While article 3 of the Declaration stipulates the right of indigenous peoples to self-determination and the free pursuit of their economic, social and cultural development, article 32 emphasizes the right of indigenous peoples to determine and develop priorities and strategies for the development or use of their lands or territories and other resources. In other words, the Declaration recognizes the right of indigenous peoples to development in accordance with their own aspirations and needs, providing a foundation for development with culture and identity.

2. The label of “development with culture and identity” has gained prominence in the work of the Permanent Forum since the proclamation of the Second International Decade of the World’s Indigenous People (2005-2014). In resolution 59/174, the General Assembly reaffirmed that States should, in accordance with international law, take concerted positive steps to ensure respect for all human rights and fundamental freedoms of indigenous people, on the basis of equality and non-discrimination, and recognized the value and diversity of their distinctive identities, cultures and social organization. The indivisibility of culture and development was made explicit in the official Programme of Action for the Decade (A/60/270 and Add.1), which recommended that culture should be integrated as a prerequisite and a basis for development project design in order to build “development with identity”, respecting people’s way of life and building sustainable human development.

3. The genesis of the development with culture and identity approach goes beyond the recent history of the label, however. The jurisprudence of the Inter-American Court of Human Rights and the case law and general comments of human rights treaty bodies further to complaints filed by indigenous peoples have significantly contributed to laying the legal foundations for the Declaration on the Rights of Indigenous Peoples and thus for development with culture and identity. Similarly, the 1989 International Labour Organization (ILO) Convention concerning Indigenous and Tribal Peoples in Independent Countries (ILO Convention No. 169) recommended the self-determined development of indigenous peoples based on the recognition of their culture and identity. Indeed, debates on culture and development have occupied considerable space within the United Nations system over the past 40 years.

4. From the perspective of many indigenous peoples, “dominant” development paradigms and practices, characterized by “their strong focus on economic progress without the integration of cultural development, social justice and environmental sustainability”, have failed, since they undermined and negated the cultures and world views of indigenous peoples, even considering them as obstacles. Indigenous

peoples today continue to face serious discrimination in terms of access to basic social services, and are disproportionately represented among the world’s poor. Many populations have suffered historically from forced displacement, and their vulnerability to the impacts of globalization and climate change remains particularly high.

5. Despite these multiple threats, however, indigenous peoples have demonstrated their capacity to adapt to change while continuing to sustain their distinct worldviews, knowledge systems and practices, which continue to allow them to effectively manage changes to their societies and environments. Their cultural heritage and creativity provide a solid basis for generating culturally and environmentally appropriate development strategies. Development with culture and identity indeed calls for indigenous peoples to be the creators and agents of their development initiatives. Having indigenous peoples in the driver’s seat can further enhance the success of development projects, as they are more likely to be accepted, sustained and pursued further by the indigenous communities concerned, ultimately reducing the need for outside intervention. The added value of all self-driven approaches to development is multifaceted, with social, cultural, economic and environmental benefits.

6. The present paper is a joint contribution of the Inter-Agency Support Group on Indigenous Issues5 to the debate on development with culture and identity. Its aim is to approach such development from an inter-agency perspective, in order to advance thinking and stimulate ideas for action in the United Nations system on the notion and its applications. The paper highlights the conceptual and legal underpinnings of development with culture and identity in United Nations development discourse and normative frameworks, analyses relevant United Nations development approaches and experiences, and assesses implications for the United Nations system in terms of programming, policy and governance processes. The paper thereby is an attempt to also address and propose ways to overcome challenges in achieving development with culture and identity as they relate to the complex issue of human, cultural and environmental vulnerability and fragility.

II. Understanding conceptual and legal underpinnings of development with culture and identity

7. Development with culture and identity, with reference to the United Nations Declaration on the Rights of Indigenous Peoples, is a complex notion that is firmly grounded in international human rights agreements, notably those related to culture, as an integral component of sustainable livelihood and well-being. Development with culture and identity furthermore resonates strongly with the development discourse of the United Nations, which evolved from single-modelled economic progress to broader notions of human and sustainable development, increasingly recognizing the value and principles of linking cultural and biological diversity, as well as the responsibility to fulfil human rights and to address the aspirations of both individuals and communities. As further explained below, United Nations

5 The Inter-Agency Support Group was established to support and promote the mandate of the United Nations Permanent Forum on Indigenous Issues within the United Nations system. Its mandate was later expanded to include support to indigenous-related mandates throughout the intergovernmental system.
development frameworks that recognize and build on culture and identity are inherently human rights-based and grounded in an effort to humanize development. They reveal a broad and dynamic understanding of culture, recognize interconnections between cultural and biological diversity and promote gender equality; at the same time, they require genuine dialogue with other cultures to flourish and regenerate. In this way, United Nations organizations, with reference to their specific mandate, have over the years brought new ideas and purpose to the development debate.  

A. Putting people at the centre: the human development paradigm

8. The emergence of the human development paradigm in the 1980s, culminating with the first Human Development Report in 1990, marked the beginning of a shift in international development discourse, a questioning of the pre-eminence of economic growth and a steady movement towards a broader well-being approach, putting people back at the centre of the process. It set a new global agenda for human development and its measurement, suggesting new sets of indicators for that purpose.

9. The human development paradigm emphasizes that the basic purpose of development is to enlarge people’s choices and enhance human capabilities and freedoms, enabling people to enjoy long, healthy and creative lives. The emphasis on choice, fundamental freedoms and participation in decisions affecting the life of one’s community is indeed central to development with culture and identity.

10. Over the past decades, the understanding of the human development paradigm has deepened, notably through its applications in practice but also by linking it to the critical challenges of our times. The 2004 Human Development Report on cultural liberty is one noteworthy example; it articulates the indivisibility of development, culture and identity in the consideration of indigenous peoples’ issues. It states that human development “requires more than health, education, a decent standard of living and political freedom. People’s cultural identities must be recognized and accommodated by the State, and people must be free to express these identities without being discriminated against in other aspects of their lives.” In other words, efforts to humanize development require a global commitment to cultural diversity, tolerance and pluralism as non-negotiable principles.

B. Giving culture a permanent place in development thinking

11. The 1982 World Conference on Cultural Policies, also known as MONDIACULT, became a landmark for debates on the indivisibility of development and culture, defining the latter in the wider, anthropological sense of the word as encompassing the entire range of spiritual, material and intellectual...
values that typify a particular group or society. In other words, culture became understood as encompassing all that human beings have and do to produce, relate to each other and adapt to the physical environment. Thus the United Nations World Commission on Culture and Development was asked to give culture a permanent place in development thinking and emphasized that “development divorced from its human or cultural context is growth without a soul”.

12. The indivisibility of culture and development thus implies recognition of the intangible dimensions of development, recognizing people, values, knowledge systems and the capacity to create and aspire as integral parts of development. The diversity of these visions and expressions, which are not static but rather constantly evolving, is embodied in the “uniqueness and plurality of the identities” of the groups and societies making up humankind, including indigenous peoples. Cultural diversity is thus “one of the roots of development, understood not simply in terms of economic growth, but also as a means to achieve a more satisfactory intellectual, emotional, moral and spiritual existence”.

13. Nevertheless, connecting culture and development entails challenges for contemporary, de facto plural, societies, challenges that are well known to indigenous peoples: (a) the “hyperculturalization” of social issues, which makes culture the single cause of all kinds of problems; (b) assimilation policies based on the assumption that cultures are a threat to national unity, social cohesion and development; and (c) segregation in the name of particularism, or stressing differences to the extent that they become incompatible with a public life. Indigenous cultures may furthermore be confronted with major risks of folklorization, mummification and commercialization.

14. Conceptual advances recognizing the indivisibility of culture and development have found an echo in the normative sphere. The United Nations Educational, Scientific and Cultural Organization (UNESCO) Universal Declaration on Cultural Diversity (2001), as well as related conventions, indeed bring together the politics of identity with the economics of sustainable human development and support individuals and communities, as well as nation States, in promoting their own development on their own terms. Indigenous peoples and their human rights, cultures and knowledge systems hold a significant place in these normative

---

9 See State of the World’s Indigenous Peoples (United Nations publication, Sales No. 09.VI.13), chap. II.
instruments. Together with the World Intellectual Property Organization (WIPO) draft provisions for the protection of traditional cultural expressions and expressions of folklore and for the protection of traditional knowledge, they are important milestones in promoting development with culture and identity.

15. By acknowledging that the relation between culture and development is not one of dichotomy but of indivisibility, the United Nations discourse and normative frameworks resonate with indigenous peoples’ holistic systems of thought, which consider that “culture is development and development is culture”. Therefore, there is no prescribed pathway for the development of a society, no single model on which development strategies should be based, as was emphasized in the recent world report on cultural diversity and intercultural dialogue.

C. Linking cultural and biological diversity for sustainable human development

16. While the debate on culture and development succeeded in putting the human being back at the centre of the development agenda, it continued to consider nature as “a thing apart”. This anthropocentrism came to be questioned in debates on the linkages between cultural and biological diversity, in particular from the point of view of indigenous peoples.

17. For many indigenous peoples, development with culture and identity necessarily also considers the linkages between cultural and biological diversity. While mainstream development has traditionally entailed the large-scale exploitation of natural resources, indigenous peoples have developed sustainable relationships with their natural surroundings. As the issue of Poverty in Focus on “Indigenising development” pointedly states, nature cannot be seen as merely “a grocery store at the service of men”. Throughout history, indigenous peoples have developed complex cosmologies in which respecting the interdependence of human beings and nature is a fundamental value, and community well-being, balance and harmony have been prioritized over growth and technology.

18. These linkages between cultural and biological diversity have been increasingly articulated in debates on sustainable development, most recently in the context of climate change, emphasizing that the needs of the present should be addressed without compromising the ability of future generations to meet their own needs. Reduced diversity, in its cultural and biological manifestations, poses a threat to global stability and sustainability, rendering the world and its inhabitants more and more vulnerable. Increasingly, cultural and biological diversity are

18 See also the report of the World Commission on Environment and Development entitled Our Common Future (A/42/427, annex).
considered as collective forces of development, since together they hold the key to ensuring resilience in both social and ecological systems.\textsuperscript{19}

19. The Convention on Biological Diversity, adopted at the 1992 United Nations Conference on Environment and Development, in article 8 (j), calls on parties to respect, preserve and maintain the knowledge, innovations and practices of indigenous and local communities relevant for the conservation of biological diversity, to promote their wider application with the approval of knowledge holders and to encourage equitable sharing of the benefits arising out of the use of biological diversity. The conservation, sustainable use and equitable sharing of benefits that nature provides are also the cornerstones of indigenous societies.

20. Mechanisms put in place to respond to climate change, such as the United Nations Collaborative Programme on Reducing Emissions from Deforestation and Forest Degradation in Developing Countries (UN-REDD), offer opportunities for indigenous peoples to see their climate concerns addressed. More clarity on land ownership may ensure that such mechanisms can effectively benefit indigenous peoples.

21. It is problematic, however, to note that sustainable development discourse and environmental conservation approaches often promote a one-dimensional vision of indigenous peoples as custodians of nature, reigniting the myth of the “noble savage”.\textsuperscript{20} In practice, sustainable development has attempted to mitigate the negative impacts of traditional conceptions of development rather than to radically question its principles, processes and logic. Through proposing development with culture and identity, indigenous peoples encourage the international community to go further in rethinking biocultural diversity and sustainability. They are sending the strong message that diversity is an important prerequisite for ensuring development that is environmentally, socially, culturally and economically resilient and sustainable.\textsuperscript{21}

D. Interface with human rights and special consideration of gender, children and youth

22. What is still often forgotten in development debates is that international human rights instruments have for decades provided a comprehensive international legal framework of obligations, which States have voluntarily agreed to fulfil and which provides the parameters of what Governments may or may not do in the name of development. These human rights instruments, elaborated by the United Nations in the past five decades, have opened up considerable conceptual space in which to bring together human rights and development, creating what is now known as the

\begin{footnotesize}
\begin{enumerate}
\item See José Pimenta, “Twisting development: the Ashaninka way” in “Indigenising Development” (footnote 17).
\end{enumerate}
\end{footnotesize}
United Nations common understanding on a human rights-based approach to development cooperation, which was adopted by the United Nations Development Group in 2003. This approach, which addresses issues of culture and gender, aims to promote and protect human rights, reduce inequality and harness the substantive participation of those who are most affected, including children. Indeed, the links between culture, gender and human rights are part and parcel of development with culture and identity, and require attention if progress on the human rights situation of indigenous peoples is to be attained. Women, children and youth are explicitly mentioned in several articles of the United Nations Declaration on the Rights of Indigenous Peoples, since they have often been victims of multiple discrimination and have not always received the distinct consideration they deserve as key actors with regard to development with culture and identity (see CRC/C/GC/11).

23. The right to self-determination is recognized in common article 1 of the International Covenant on Civil and Political Rights, the International Covenant on Economic, Social and Cultural Rights and the United Nations Declaration on the Rights of Indigenous Peoples. By virtue of this right, people may freely pursue their economic, social and cultural development. They may also exercise their “right to autonomy or self-government in matters relating to their internal and local affairs”\(^\text{22}\) which points to the importance of access, use and control of land, territories and resources for self-determination. As for ILO Convention No. 169, it elaborated on the right of indigenous peoples to development, underlining how that should be promoted by States, based on respect for the right of indigenous peoples to determine their own priorities and the importance of the concepts of consultation, consent and participation. Therefore, according to the international normative human rights framework, development is far from a single-model concept.

24. Two normative pillars of the United Nations Declaration on the Rights of Indigenous Peoples underpin the concept of development with culture and identity: the set of rights defining the effective participation of indigenous peoples and the set of rights defining the cultural rights of indigenous peoples.\(^\text{23}\) In the Declaration, there are 9 preambular paragraphs and 15 operative articles dealing with consultation, partnership and participation of indigenous peoples in a democratic polity that essentially lay the foundation for equitable interaction with indigenous peoples. Furthermore, through its 17 articles about culture, the Declaration illustrates that cultural rights are more than merely those rights which refer to culture; they include all human rights that protect and promote the cultural identity of individuals and their communities.

25. It has been argued, however, that cultural rights can in fact conflict with other human rights. This argument is based on a conceptual confusion between cultural rights and cultural practices, customs and prejudices that infringe on human dignity, for example, female genital mutilation or widow cleansing. The UNESCO Universal Declaration on Cultural Diversity is clear on this point, reasserting that “cultural rights are an integral part of human rights, which are universal, indivisible and

\(^{22}\) See Article 4 of the United Nations Declaration on the Rights of Indigenous Peoples.

\(^{23}\) International human rights provisions specifically dealing with cultural rights are found in article 27 of both the Universal Declaration on Human Rights and the International Covenant on Civil and Political Rights; article 15 of the International Covenant on Economic, Social and Cultural Rights; and article 5 of the United Nations Educational, Scientific and Cultural Organization Universal Declaration on Cultural Diversity.
interdependent” and that “no one may invoke cultural diversity to infringe upon human rights guaranteed by international law, nor to limit their scope”. Similar provisions are contained in other global instruments.

26. Thus, States are required to respect their international human rights obligations, including the full and effective participation of indigenous peoples, notably indigenous women, youth and children, in setting development policies and programmes, even when those voices reflect different visions and cultural perspectives with regard to human development. The adoption of the United Nations Declaration on the Rights of Indigenous Peoples therefore requires new approaches to development that are respectful of the cultures of indigenous peoples within larger human rights frameworks, and encourages the building of genuine partnerships.

III. Applying the concept of development with culture and identity in United Nations areas of work

27. The various dimensions and principles of development with culture and identity not only are part and parcel of United Nations development discourse and legal instruments but also find concrete applications in various areas of work of United Nations entities. Given the magnitude of relevant work carried out by the United Nations, the task of undertaking a comprehensive analysis from a perspective of development with culture and identity would go well beyond the scope of the present paper. Moreover, there is as yet no tool to facilitate a systematic analysis from such a perspective, nor is there a way to establish criteria for what would qualify as best practice. The United Nations Declaration on the Rights of Indigenous Peoples provides a useful starting point for an analytical programming lens, however, and the discussion below may contribute to a reflection on what good practice in the area of development with culture and identity entails and what challenges persist.

A. Key United Nations programme areas to support development with culture and identity: from socio-economic development and the environment to health, education and culture

28. The United Nations has a rich array of development project and programme experiences that reflect principles and issues of development with culture and identity as they were discussed in section II above. Some of them are presented below and fall under the six mandated areas of the United Nations Permanent Forum on Indigenous Issues: (a) economic and social development; (b) environment; (c) health; (d) education; (e) culture; and (f) human rights. These examples were identified by members of the Inter-Agency Support Group as illustrations of good practice in the area of development with culture and identity for the purpose of the present joint paper; they provide only a glimpse of what is being done.

29. The livelihoods of indigenous peoples, including food systems and food sovereignty, must be sustained, since these represent the key source of their identity,
survival and economic development. Specific examples include the work of the Food and Agriculture Organization of the United Nations (FAO) in creating an enabling environment for food security and livelihood sustainability through capacity-building of rural indigenous organizations25 and the extensive support from the International Fund for Agricultural Development (IFAD) to demand-driven projects for the economic empowerment of indigenous communities through its loan- and grant-financed projects and the innovative Indigenous Peoples Assistance Facility.26

30. Issues of access to and protection of land, territories and resources need to be addressed. Many projects and programmes in this area support and facilitate processes of consultation, dialogue and negotiation between indigenous communities, Governments and third parties. FAO, for example, developed an approach called participatory and negotiated territorial development for areas with competitive and multiple uses of land and natural resources. It facilitates a dialogue among the various actors involved in order to promote a negotiated approach to territorial development. The approach has been successfully used to defend the rights and interests of indigenous peoples in various parts of the world.27 The United Nations Human Settlements Programme (UN-Habitat), together with the Global Land Tool Network, is currently developing a policy guide to land for indigenous peoples in cities. This guide is expected to serve policymakers worldwide as a tool for supporting the access of indigenous peoples to land and security of tenure in urban areas. At the inter-agency level, the International Land Coalition28 and its regional platforms in Asia, Latin America and Africa have prioritized the land rights of indigenous peoples. They support the mapping of indigenous territories, innovation in securing the territorial rights of indigenous peoples in the face of increasing commercial pressures on their lands and self-determination for indigenous territorial autonomies within the evolution of a democratic State.

31. The sustainable use of natural resources and the protection of biodiversity needs to be promoted, especially in the light of the fact that indigenous peoples’ traditional lands and territories host much of the world’s biological diversity. This has been one area of focus of the UNESCO Local and Indigenous Knowledge Systems (LINKS) project, which aims to build dialogue among traditional knowledge holders, natural and social scientists, resource managers and decision makers in order to enhance biodiversity conservation and secure an active and equitable role for local communities in resource governance.29 The UNESCO Man and the Biosphere Programme is an intergovernmental programme which also works closely with local and indigenous communities for the improvement of the relationship between people and the environment in accordance with the principle of sustainable use and conservation of biological diversity. The Globally Important

26 See www.ifad.org/english/indigenous/grants.
28 The International Land Coalition is a global alliance of organizations that brings together members from the United Nations system (the International Fund for Agricultural Development, the Food and Agriculture Organization of the United Nations, the World Food Programme, the United Nations Environment Programme and the World Bank) with a wide variety of civil society organizations, including indigenous peoples’ organizations.
29 See www.unesco.org/links.
Agricultural Heritage Systems initiative supported by FAO provides another instructive example.30

32. Strategies for climate change adaptation and mitigation need to be developed by giving voice to the knowledge, experiences and perspectives of indigenous peoples and supporting measures to ensure resilience. For example, the Climate Frontlines forum,31 a joint initiative of UNESCO and the secretariats of the United Nations Permanent Forum on Indigenous Issues, the Convention on Biological Diversity and the Office of the United Nations High Commissioner for Human Rights, gives voice to indigenous communities and supports local demand-driven projects. The “Many strong voices” programme32 of the United Nations Environment Programme (UNEP) Global Resource Information Database is aimed at supporting exchange of knowledge and expertise on climate change between the Arctic and small island developing States, and assisting peoples in both regions to support each other in having their voices heard at the local, regional and international levels.

33. Policies and measures for the realization of the right to adequate housing, notably in contexts of displacement and urban migration, need to be fostered. In this regard, UN-Habitat is providing decision makers with guidance to implement policies and programmes that involve indigenous peoples in improving their living conditions in urban areas, building on their know-how and customs and thus promoting their right to adequate housing.33

34. Approaches to health care and prevention that are culture- and gender-sensitive and rights-based, building on indigenous peoples’ knowledge and responding to their specific needs, need to be promoted and implemented. The United Nations Population Fund (UNFPA) and the United Nations Children’s Fund (UNICEF) are applying culture-sensitive approaches to sexual and reproductive health.34 Notably, UNESCO, UNFPA and UNICEF propose culture-sensitive approaches to HIV and AIDS prevention and care in the context of the Joint United Nations Programme on HIV/AIDS (UNAIDS), building on local assets and taking into account indigenous beliefs, practices and sensitivities about illness, sex and reproduction. They work with indigenous communities and adolescents in different parts of the world.35

35. Mother-tongue and intercultural education respecting the rights of the child and principles of non-discrimination in education36 need to be advanced in order to address the twofold challenge of supporting and promoting the maintenance, use and survival of indigenous cultures, traditions and identity while also providing the knowledge and skills that allow indigenous peoples to participate fully and equally in the national and international community. Examples include the initiatives of UNICEF for the production and dissemination of bilingual educational materials

---

32 See www.manystrongvoices.org.
35 For further details on the work of the United Nations Educational, Scientific and Cultural Organization on culture, HIV and AIDS, see www.unesco.org/culture/aids.
that draw on indigenous forms of creative expression and the support of UNESCO to programmes that incorporate indigenous local knowledge and language content into school curricula.37

36. It is important to defend the creative capacity of indigenous peoples, which takes multiple intangible and tangible forms and regenerates itself through contemporary invention, thus making an outstanding contribution to the common heritage of humanity. These expressions are integral to the cultural and social identities of indigenous and local communities, since they embody know-how and skills and transmit core values and beliefs. Given that “culture” for indigenous peoples embodies a whole way of life that stems from their livelihoods and their relations to the land, projects in this field often touch upon a wide array of development issues. UNESCO works with indigenous peoples in all areas of heritage and cultural expressions, including the safeguarding of indigenous languages, the intangible heritage of indigenous peoples and the protection of indigenous sacred sites and cultural landscapes.38 WIPO, for its part, has an extensive programme on the protection of traditional cultural expressions and traditional knowledge against misappropriation and misuse.39

B. Assessing thematic United Nations programmes from the perspective of development with culture and identity

37. What the different examples above have in common is that they take the specific situation, socio-cultural values, heritage, assets and perspectives of indigenous peoples as a starting point for the intervention. They thus indicate a shift from a deficit and a one-size-fits-all development approach to tailored and diversified ways of addressing critical development issues in line with development with culture and identity. The examples of supporting sustainable livelihoods and food systems in particular illustrate ways to move away from reducing indigenous peoples to being victims of poverty and towards acknowledging their leadership in finding their own solutions and in driving their own socio-economic development based on their perspectives, institutions and world views.

38. Nevertheless, much of United Nations development practice in the public services domain, including health, housing and education, seems to focus on rendering the services more accessible and relevant to indigenous peoples rather than, as stipulated in the United Nations Declaration on the Rights of Indigenous Peoples, reinforcing indigenous peoples’ own institutions. Perspectives on this issue may also vary depending on whether indigenous communities still live collectively on ancestral lands (or lands assigned to them in contexts of displacement) or no longer live the communal life but are more dispersed, often in cities. Research

37 See, for instance, the project “Village-level documentation and transmission of local environmental knowledge, Solomon Islands”. Available from www.unesco.org/links.

indicates that there is apparently a greater willingness to include indigenous peoples in the planning and management of issues regarding nature and the environment than in the planning of urban spaces and communities. More research is required to get a fuller picture of how the United Nations has been able to successfully support indigenous peoples’ own institutions within various programme fields and contexts.

39. Indeed, even if we analyse projects and programmes in which culture is at the centre of the intervention, compliance with the principle of development with culture and identity is not obvious or automatic. There have been cases in which cultural heritage projects, for example, applied safeguarding or conservation approaches on behalf of, rather than with, the community concerned. Similarly, projects promoting the cultural expressions of indigenous peoples can be disrespectful of their rights if non-indigenous individuals take the lead in producing cultural expressions of indigenous peoples and then pass these off as their intellectual property.

40. Development with culture and identity, it can be argued, is thus essentially a transversal, intersectoral approach in which processes are more determinant of its successful application than specific subject matters.

C. Identifying adequate participatory methods and programming tools in support of development with culture and identity

41. All United Nations organizations have experience in developing tools, methodologies, mechanisms and capacities that empower indigenous peoples to express and communicate their world views, identity, rights and aspirations in the context of decisions that concern the development of their communities, including consultation and dialogue mechanisms for communication and negotiation with Governments and third parties.

42. Participatory mapping, for example, which is increasingly used by United Nations organizations in their development interventions with indigenous peoples, could be considered a cornerstone of applying development with culture and identity, as it renders the sociocultural assets and knowledge of an indigenous community explicit. It can reinforce a community’s consciousness of its specific cultural traditions, resources and institutions so that its members are better prepared to express their rights, visions and priorities when confronted with development interventions initiated by a third party, whether in the area of land use, education, health or conflict prevention. As is now widely acknowledged, however, participatory mapping has to be demand-driven, contextualized and community-owned and controlled to avoid the risks implied in extractive and externally led approaches, such as the risks of folklorization or the violation of peoples’ human rights. Unethical and badly conceived mapping can expose communities, their knowledge and the natural environment to exploitation and abuse. More research on analysing concrete examples of participatory mapping from the perspective of development with culture and identity could be insightful in order to further improve United Nations action in this area.

43. The different culture lenses developed in the United Nations system are another example of transversal tools to ensure that development programming respects principles of development with culture and identity. UNFPA, for example, created its culture lens, which is an analytical and programming tool to analyse,
understand and utilize positive cultural values, assets and structures in planning and programming processes. UNESCO developed its cultural diversity programming lens, which is an analytical framework based on the principles enshrined in the UNESCO Universal Declaration on Cultural Diversity. It is aimed at enhancing commitment towards cultural diversity, cultural rights and intercultural dialogue.

44. Communication for development is yet another generic development approach relevant to indigenous peoples, since it emphasizes the need to support two-way communication systems that enable dialogue and that allow communities to express their aspirations and concerns and participate in the decisions that relate to their development. While agencies focus on different dimensions and involve indigenous peoples to various degrees, FAO is known for its experience in supporting specifically indigenous peoples’ communication for development as a strategic element to support sustainable livelihoods and self-determined development. The platforms constitute a channel for the exchange of knowledge, proposals and mechanisms to facilitate coordination and cooperation among different stakeholders while searching for common ground with indigenous peoples. At the same time, they tend to favour, arrange and promote the political agendas and programmes regarding indigenous peoples’ communication for development. An analysis of different approaches to communication for development is currently being carried out by United Nations organizations and could provide useful insights as to how much potential it offers for operationalizing development with culture and identity (see A/63/180). More generally speaking, awareness-raising about the specific situation of indigenous peoples and their development concerns, as well as the global benefits of sustaining cultural and biological diversity, should continue to be an integral part of the communication strategies of all United Nations organizations.

45. As the analysis above has shown, determining the degree to which United Nations projects and programmes reflect principles of development with culture and identity, notably the principles of self-determination, is complex and challenging. The idea of developing a specific development with culture and identity programming tool to encourage and guide development actors in the analysis of their programmes could be considered. Indeed, successful moves towards implementing development with culture and identity will depend critically on how one goes about development rather than simply on the choice of the subject matter of a specific intervention.

IV. Setting development with culture and identity in motion, notably at the country level: processes and challenges

46. Development with culture and identity is an ambitious approach that requires specific efforts, processes and methodologies in order to be applied effectively, particularly at the country level. Notably, it requires a larger enabling institutional/governance and policy environment, as well as political will, specific knowledge and capacities and adequate financial resources. Otherwise, efforts towards development with culture and identity will only have limited chances of success, and their impact might remain scattered, outside larger national development priorities and strategies.

40 See www.unfpa.org/culture/culture.htm.
47. The Inter-Agency Support Group, in close dialogue with the Permanent Forum, has identified a number of ideas and processes that suggest how the United Nations system as a whole could take the notion of development with culture and identity forward, considering also the challenges involved.

48. The United Nations Development Group Guidelines on Indigenous Peoples’ Issues were adopted by the United Nations Development Group in 2008, giving a concrete inter-agency response to the comprehensive normative framework provided by the United Nations Declaration on the Rights of Indigenous Peoples. Together with the action plan for roll-out and implementation, they provide the overarching road map for operationalizing development with culture and identity at the country level. Their purpose is to assist the United Nations system in mainstreaming and integrating indigenous peoples’ issues into processes for operational activities and programmes at the country level.

49. The United Nations Development Group Guidelines highlight a number of interrelated methodological issues which could become critical for setting development with culture and identity into motion at the country level, including respect for and application of the principle of free, prior and informed consent; full and effective participation of indigenous peoples at every stage of any development action that may affect them directly or indirectly; and disaggregated data and indicators regarding the situation of indigenous peoples.

50. One significant example of inter-agency collaboration is the establishment of consultative and participatory mechanisms for engaging with indigenous peoples at the regional and country levels. Examples include the UNICEF consultative group of indigenous leaders in the Latin American and Caribbean region, a mechanism that is now used by the whole United Nations system in that region, consultations by the United Nations Development Programme (UNDP) with indigenous communities in Latin American countries, and the institutionalized participation mechanisms put in place by WIPO and UNEP. Other agencies such as IFAD and UN-Habitat are currently planning the creation of such participation forums.

51. Increased capacity-building efforts with respect to indigenous peoples’ issues among United Nations country teams are another recent outcome of the United Nations Development Group Guidelines and its action plan. Training has already been undertaken in Nepal, the Philippines and Ecuador, and will continue over the coming years. In addition, a course was given for Government officials in Ecuador, at the request of the Government, focusing on development, indigenous peoples and interculturality. The secretariat of the Permanent Forum brought together different agencies to develop a resource kit on indigenous peoples’ issues and a corresponding training module. A training session for trainers on indigenous issues was organized by the secretariat of the Permanent Forum in June 2009, in cooperation with the ILO training centre in Turin, Italy. Other tools include the ILO

41 See www2.ohchr.org/english/issues/indigenous/docs/guidelines.pdf.
practice guide for the implementation of indigenous peoples’ rights and the new online training website for a one-week course on the rights of indigenous peoples.

52. The development of online communication platforms, such as the above-mentioned Latin America indigenous peoples’ communication platform and the community of practice on indigenous peoples’ issues is another dynamic area of implementation of the United Nations Development Group Guidelines. Such platforms constitute a channel for the exchange of knowledge, proposals and mechanisms for the coordination and cooperation among different stakeholders committed to indigenous peoples’ issues.

B. Consolidating, complementing and articulating relevant legal instruments

53. While international normative frameworks for development with culture and identity are in place to a large extent (see section II above), there is a need to further promote the ratification, effective implementation and monitoring of key normative instruments, both those with a direct focus on the rights of indigenous peoples and those which are geared towards specific aspects of development with culture and identity.

54. With regard to ILO Convention No. 169, the adoption of the United Nations Declaration on the Rights of Indigenous Peoples may provide a renewed momentum for its ratification.42 Regarding the culture conventions13 and the Convention on Biodiversity, the extraordinary speed and number of ratifications of those instruments indicates the commitment of the international community to giving greater recognition in national policy to cultural and biological diversity. The ongoing challenge is to identify and support ways and means by which these instruments can best promote the rights of indigenous peoples in their specific contexts. Indeed, in the light of the United Nations Declaration on the Rights of Indigenous Peoples, more research and advocacy are needed to effectively articulate the various instruments relevant to development with culture and identity and their implications for indigenous peoples.

55. The existing legal frameworks for development with culture and identity may in the future be complemented with new standard-setting mechanisms. Significant in this regard are the ongoing negotiations within the WIPO Intergovernmental Committee on Intellectual Property and Genetic Resources, Traditional Knowledge and Folklore on the draft provisions for the enhanced protection of traditional knowledge and traditional cultural expressions against misappropriation and misuse. Observer status at the WIPO Intergovernmental Committee has been granted to the representatives of indigenous peoples who have requested it, and many have received financial support from a special voluntary fund when participating. Another example is the recent discussions within UNESCO on assessing the technical and legal aspects of a possible international standard-setting instrument for the protection of indigenous and endangered languages.

C. Policies on indigenous peoples at the level of United Nations organizations: a positive factor for development with culture and identity

56. The elaboration of policies, strategies and guidelines on indigenous peoples by individual agencies is yet another important institutional development from the perspective of development with culture and identity. Such policies reflect the application of the principles of the United Nations Declaration on the Rights of Indigenous Peoples in the context of the mandate, strategy and intervention of specific organizations. They have succeeded in giving greater visibility to indigenous peoples’ issues within an organization and provide the enabling environment required to develop relevant projects and programmes, networking and the identification of targeted budgets. The elaboration process of these policies itself, which requires the mobilization of committed senior managers and extensive consultations with Member States, has been experienced by agencies as a valuable means of building political commitment and capacity with regard to indigenous peoples’ issues.

57. IFAD, which after a long process successfully adopted its policy on engagement with indigenous issues in September 2009, offers a recent example of such an elaboration process. It is worth noting that this policy builds on the cultural heritage and identity of indigenous peoples as assets and pays full tribute to the principles of free, prior and informed consent.43

58. Other examples include the World Bank’s revised operational policy and bank procedure on indigenous peoples (2005), the Inter-American Development Bank’s policy on indigenous peoples (2006), “UNDP and indigenous peoples: a practice note on engagement” (2001) and the policy of the European Bank for Reconstruction and Development (2009). FAO and UNICEF are also in the process of elaborating policies, while UNEP and UN-REDD have developed new guidelines on how to work with indigenous peoples. UNESCO published a handbook entitled “UNESCO and indigenous peoples: partnership for cultural diversity” (2004). The major challenge, however, will be to ensure that staff and stakeholders concerned are adequately informed and trained to put these policies into practice.

D. Challenges in promoting development with culture and identity through United Nations action: an analysis of the current aid architecture

59. While institutional responses to indigenous peoples’ issues have gained prominence at the United Nations level, critical barriers to actually involving indigenous peoples in governance processes remain. Even if such obstacles are often beyond the direct control of the United Nations alone, there are still a number of steps agencies can take in order to create an enabling environment to address them. These issues will be explored below through an analysis of the challenges raised by the development aid architecture.

60. The Paris Declaration on Aid Effectiveness (2005), which is an international agreement to increase efforts with respect to the harmonization, alignment and

---

managing of aid, together with the Accra Agenda for Action (2008), emphasize that implementation should be through country systems and that conditionalities should be drawn from developing countries’ own policies. There are a number of risks regarding support to indigenous peoples’ issues related to the principles of the Paris Declaration. For example, considering that many developing countries, particularly in Africa and Asia, have no formal legislative or policy recognition of the rights of indigenous peoples, there is thus an inherent risk of further exclusion of indigenous peoples in the development process if specific safeguards are not developed. Many indigenous peoples have no, or only weak, participation in parliament, governance structures and national decision-making processes. Often, their needs and priorities are not reflected in development policies and plans, and they do not benefit proportionately from poverty reduction efforts. Also, donors often have weak capacity or hesitate to engage in policy dialogue on indigenous peoples’ issues, and may not comply with their own institutional policies on supporting indigenous peoples if recipient countries are reluctant. Furthermore, the lack of a common policy or strategy on support to indigenous peoples (in the context of the commitments stipulated by the Paris Declaration and the Accra Agenda) could possibly undermine the value of individual donor policies regarding support to indigenous peoples. Finally, in many countries adequate data on indigenous peoples are not available, and national statistical bureaux do not always have the capacity to provide disaggregated data. Indeed, the reformed aid architecture itself provides no safeguards to ensure that “effectiveness” does not jeopardize the rights-based approach to indigenous peoples’ development.

61. In February 2007, the Organization for Economic Cooperation and Development’s (OECD) Development Assistance Committee adopted an action-oriented policy paper on human rights and development, acknowledging that the international human rights framework and the Paris Declaration should reinforce and benefit from each other. This thinking obviously provides an entry point for including the rights of indigenous peoples in development cooperation. A key challenge from the perspective of development with culture and identity, however, is that, while the United Nations Declaration on the Rights of Indigenous Peoples was adopted with an overwhelming majority and presents key human rights instruments to frame collaboration on indigenous peoples’ issues, many Governments are still not applying it to set the standards for national policies and development cooperation. There is thus a need for ongoing dialogue among members of the OECD Development Assistance Committee, developing countries, the United Nations system and indigenous peoples on how to ensure that the rights and aspirations of indigenous peoples are addressed and supported in the context of the aid effectiveness agenda. In this regard, it will be important to highlight the multiple benefits of self-driven approaches to development.

V. Conclusion

62. The present paper set out to instigate reflection and dialogue on development with culture and identity from an inter-agency perspective in order to advance the thinking and stimulate ideas for action in the United Nations system regarding development with culture and identity and its applications. To this end, the present paper analysed the theoretical and legal underpinnings of development with culture and identity in United Nations development discourse and normative frameworks, as
well as its implications for the United Nations system in terms of programming, policy and governance processes.

63. A number of key messages arose from this reflection, which are as follows:

   (a) While development interventions are intended to bring benefits, they may in fact be detrimental to the target population or community if they are founded on preconceived assumptions about what constitutes “progress”. They can indeed perpetuate existing prejudice, exclusion and power imbalances, ultimately undermining the cultures of the peoples concerned. Indigenous peoples are particularly familiar with these negative effects of development programmes;

   (b) Indigenous peoples have developed effective methods for managing and caring about their environments, livelihoods and well-being. They also have strategies for coping with social and environmental change. These capacities are valuable assets for sustainable human development. The commitment of development agents at all levels is required to fully recognize diversity and distinctiveness by acknowledging indigenous peoples as creators and agents of development initiatives. Such self-driven approaches may further the effectiveness and sustainability of development programmes if they are grounded in locally tailored, environmentally and culturally appropriate strategies that are more likely to be supported and continued by the population and communities concerned;

   (c) Development with culture and identity clearly draws from, embraces and creates synergies between critical conceptual developments and legal advances in United Nations development efforts, effectively linking principles of human development, sustainability (both urban and rural), gender and cultural and biological diversity within a larger human rights framework;

   (d) Development with culture and identity, as a specific approach to development embedded in the United Nations Declaration on the Rights of Indigenous Peoples, requires new ways of going about development that emphasize full participation and the need for new governance and institutional arrangements;

   (e) In addition to much-needed institutional commitment, a development with culture and identity approach will require genuine intercultural dialogue between indigenous and non-indigenous partners to reinforce mutual respect and appreciation for their respective world views, values, cultures and socio-economic institutions. These provide an invaluable reservoir of knowledge and concepts about well-being and thus a dynamic resource for sustainable development.

64. Based on these key messages, priority areas for action can be determined as follows:

   (a) As the United Nations Declaration on the Rights of Indigenous Peoples provides a comprehensive and key framework for development with culture and identity, it needs to be mainstreamed into all United Nations policies and programmes in order to put the new approach into practice;

   (b) The United Nations Development Group Guidelines, together with the action plan, should be implemented, as they provide a useful road map for the United Nations to promote the implementation of development with culture and identity, notably at the country level;
(c) A challenge for all efforts to promote development with culture and identity is the fact that, even if the current aid architecture acknowledges a human rights-based approach to development cooperation, in reality the rights enshrined in the United Nations Declaration on the Rights of Indigenous Peoples are not systematically respected. It will therefore be important for all stakeholders, including the United Nations, to continue the dialogue with Governments to ensure that efforts to promote development with culture and identity receive the support they require;

(d) Taking development with culture and identity forward through action by the United Nations will require careful assessments through the lens of key principles and norms, such as self-determination, cultural rights and cultural and biological diversity. In other words, development with culture and identity is an ambitious and challenging approach, and development programmes and projects cannot be automatically labelled as examples of good practice of development with culture and identity just because they address indigenous peoples’ issues.

65. Crucially, several issues emerge from the present paper that merit more reflection and ongoing dialogue in order to further develop the evolving notion of development with culture and identity:

(a) Development with culture and identity has a complex legal underpinning that connects different existing human rights standards and ethical principles, all of which are indivisible. Development with culture and identity therefore cannot be merely equated with self-determination in absolute terms, nor do culturally sensitive development approaches ensure automatic compliance with the concept of development with culture and identity. Balancing the right to self-determination with other key rights and principles of development with culture and identity is an ongoing challenge and could become a new focus of collaborative action-oriented research between indigenous peoples and United Nations organizations;

(b) There are possible tensions between indigenous peoples’ holistic cosmovisions, which see the human being and nature as indivisible, and the anthropocentric worldview that anchors much of United Nations development discourse, emphasizing people-centred approaches. The discussions and work on linking cultural and biological diversity have opened up new opportunities in the United Nations to address this gap, but more intercultural dialogue is required in the context of development with culture and identity;

(c) Indigenous identities, like all identities, are complex, fluid and of multiple natures, and thus cannot be confined to a single definition. Therefore, all stakeholders have to be cautious of homogenizing the cultures and identities of indigenous peoples. It would be insightful to explore further the place of plural identities and multiple cultural affiliations of indigenous individuals and communities, such as those living in urban areas, for example, in the context of policy and programming for development with culture and identity.

66. It is hoped that the present paper will bring fresh energy to the debate on development with culture and identity as a horizon for development cooperation with indigenous peoples, articulating further the concepts, norms and practices pertaining to this new approach.
