CONVENTION ON BIOLOGICAL DIVERSITY

SECRETARIAT

Ref.: SCBD/STTM/JM/RH/va/32217

10 October 2002

NOTIFICATION

Dear Madam/Sir:

Subject: Questionnaire on Indicators for Biological Diversity

In paragraph 2 of decision VI/7 B, the Conference of the Parties at its sixth meeting urged Parties that have not yet done so to respond to the questionnaire on the subject of indicators, which was sent by the Executive Secretary in May 2001, so as to enable the Executive Secretary to update the analysis.

Indicators are one of the means to measure progress and achieve targets. Article 7 of the Convention on Biological Diversity (CBD) states:

Each contracting Party shall, in accordance with its particular conditions and capabilities:

- a) Identify components of biological diversity important for its conservation and sustainable use; and
- b) Monitor through sampling and other techniques, the components of biological diversity identified pursuant to paragraph (a) above, paying particular attention to those requiring urgent conservation measures and those which offer the greatest potential for sustainable use.

Pursuant to this article, COP decisions II/9, III/9 and III/10 require that national implementation reports by Parties should include targets and indicators, and that a core set of indicators should be included by governments in their national implementation reports.

Given the complexity of the issue, the lack of data on many indicator variables and the lack of capacity in most developing countries to develop indicators and effectively monitor progress, it became clear from the meetings of the Subsidiary Body on Scientific, Technical and Technological Advice (SBSTTA) and the Conference of the Parties (COP), that the work on indicators is a long-term process.

As a starting point, and to enable the Conference of Parties to be able to report on global trends on biological diversity, it is necessary to compile a set of indicators that are currently being used by Parties as a basis to assist countries to develop their own indicators at the national level as part of their monitoring processes.

To: CBD National Focal Points (who have not responded to date to the Secretariat's Notification of 15 May 2001)

United Nations Environment Programme Tel: (514) 288.22.20 Fax: (514) 288.65.88 Email: secretariat@biodiv.org Web: www.biodiv.org World Trade Centre 393 Saint-Jacques Street, Suite 300 Montréal, Québec, Canada H2Y 1N9 The Executive Secretary, with the assistance of a liaison group of experts, prepared a core set of indicators derived from various international and national initiatives, which was presented to the Conference of Parties at its fifth meeting. Some Parties felt that a global set of core indicators was premature and requested the Executive Secretary to promote the development of indicators at the national level in accordance with recommendation III/5, including the development of a key set of standard questions, a set of principles for designing national level monitoring programmes as well as a list of available and potential indicators.

It is in this context that I am requesting all National Focal Points to the Convention to provide the Secretariat with existing indicators that are currently operational in their respective country. Attached, for your reference, are some indicators that have been developed under various initiatives at various levels, which you may use as a reference point. You may add to or subtract from this list, indicate which of the listed indicators are used and provide any other comments, as appropriate. It may be useful to mention the specific purpose for which a particular indicator is used and its success as a monitoring tool for the status and trends of biodiversity.

In providing the indicators please do not restrict yourself to those indicators developed under the CBD process. Indicators developed under other processes such as CSD, State of the Environment Reporting etc. may also be relevant and should be included.

I have also been requested to develop a list of principles to guide Parties in developing their indicators and a set of standard questions that indicators can help to answer for policy makers. I am attaching as Annex 1 some proposed principles and questions for your comments.

We would appreciate if you could complete the table and return it to the Secretariat together with your comments **no later than 31 December 2002**. In case you are able to send your response by 30 November 2002 it will be incorporated in an analysis being prepared for an expert meeting on indicators scheduled for early December 2002.

Please accept the assurances of my highest consideration.

[signed]

Hamdallah Zedan Executive Secretary

INDICATIVE LIST OF BIODIVERSITY INDICATORS

INDICATORS	USED OR NOT	COMMENTS
Forestry biodiversity		
Total forest area		
Total Forest area as a % of total land area		
% forest cover by forest type(primary,

collection stands, etc.		
	Total forest area Total Forest area as a % of total land area % forest cover by forest type(primary, secondary or plantation) Ratio between exotic species and native species in plantation area Forest area change by forest type (primary, secondary or plantation) Per capita wood consumption Change in land use, conversion of forest land to other land uses (deforestation rate) Self-generating area per habitat type Self-generating area as a % of total area Fragmentation of forests % protected area of total forest area % protected area with clearly defined boundaries % forest managed for wood production % forest land managed for recreation and tourism to total forest area Area and % of forests managed for catchment protection % forest protected areas by forest type by age, class, and successional stage) Area and length and numbers of biological corridors Annual volume and area of timber harvested-indigenous and plantation Contribution of forest sector to GDP Number and size of forest fires Reforested and afforested areas Area and extent of degraded lands reclaimed through forest operations Relationship between forest cover and frequency of flooding Changes in the proportions of stands managed for conservation and utilization of genetic resources (gene reserves, seed	Forestry biodiversity Total forest area Total Forest area as a % of total land area % forest cover by forest type(primary, secondary or plantation) Ratio between exotic species and native species in plantation area Forest area change by forest type (primary, secondary or plantation) Per capita wood consumption Change in land use, conversion of forest land to other land uses (deforestation rate) Self- generating area per habitat type Self- generating area as a % of total area Fragmentation of forests % protected area of total forest area % protected area with clearly defined boundaries % forest managed for wood production % forest land managed for recreation and tourism to total forests managed for catchment protection % forest protected areas by forest type by age, class, and successional stage) Area and length and numbers of biological corridors Annual volume and area of timber harvested-indigenous and plantation Contribution of forest sector to GDP Number and size of forest fires Reforested and afforested areas Area and extent of degraded lands reclaimed through forest operations Relationship between forest cover and frequency of flooding Changes in the proportions of stands managed for conservation and utilization of genetic resources (gene reserves, seed

	INDICATORS	USED OR NOT	COMMENTS
	Area and % of forest area affected by		
	anthropogenic effects (logging, harvesting		
	for subsistence).		
	Area and percentage of forest area affected		
	by natural disasters (insect attack, disease,		
	fire and flooding)		
	Forest conversion affecting rare		
	ecosystems by area		
	Extent of mixed stands		
	Managed forest ratio		
	Wood harvesting intensity		
	Estimate of carbon stored		
	Absolute and relative abundance, density,		
	basal area, cover, of various species		
	Threatened tree species as a percentage of		
	the 20 most used for commercial purposes		
	Number of threatened, keystone, flagship		
	species		
	Number of extinct, endangered,		
	threatened, vulnerable and endemic forest		
	dependent species by group (e.g. birds,		
	mammals, vertebrates, invertebrates)		
ES	List of flora and fauna		
Z	Existence of procedures for identifying		
SPECIES	endangered, rare, and threatened species		
	Existing strategies for <i>in situ/ex situ</i>		
	conservation of genetic variation within commercial, endangered, rare and		
	threatened species of forest flora and		
	fauna.		
	Number of forest dependent species whose		
	populations are declining		
	Population levels of representative species		
	from diverse habitats monitored across		
	their range		
	Number and extent of invasive species		
7	Agricultural Biodiversity		
EM	Agricultural area by crops (cereal, oil		
ST	crops, forage, woodlands)		
SY IT	Agricultural area (intensively farmed,		
ECOSYSTEM/ HABITAT	semi-intensively farmed and uncultivated)		
田田			

	INDICATORS	USED OR NOT	COMMENTS
	Change in area of agricultural land (converstion to or from agriculture)		
	Intensification and extensification of agricultural land use		
	Use of agricultural pesticides		
	Number of species threatened by		
	agriculture by group e.g. birds, mammals, vascular plants, vertebrates, invertebrates)		
	Number of vertebrate species using habitat on agricultural land by species.		
	Differences in species diversity and abundance of arthropods and earthworms		
SPECIES	in organically and conventionally cultivated arable land		
SPI	Rate of change from dominance of nondomesticated species to domesticated species		
	Species diversity used for food Erosion/Loss of genetic diversity		
	patrimony		
	Crops/livestock grown as a percentage of number of 30 years before		
	Accession of crops and livestock in ex-situ storage (number or percentage)		
	Replacement of landraces with few imported ones		
	Replacement of indigenous crops		
NES	Accessions of crops generated in the past decade (per cent)		
GE	Coefficient of kinship or parentage of crops		
	Inbreeding/outbreeding rate		
	Rate of genetic interchange between populations (measured by rate of dispersal		
	and subsequent reproduction of migrants)		
/IV	Inland Waters Biodiversity		
ECOSYSTEM HABITAT	Surface water quality: Nitrogen, Dissolved oxygen, pH, pesticides, heavy metals,		
ECOS	temperature
