Climate Change and Biodiversity Opportunities for Business

Elsa Galarza Contreras

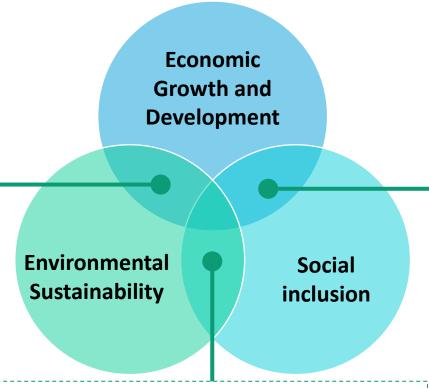

Minister of Environment of Peru

Pillars of sustainable development

Green growth

- Decoupling economic growth and carbon emissions.
- Efficient use of natural resources, like water and energy.
- Value creation for environmental goods and services.

Inclusive Growth

- Optimization of human capital to improve productivity.
- Guarantee sufficient social services to support productive activities.
- Formalization of isolated population property rights.

Green inclusion

- Lowering environmental impacts on life quality.
- Value optimization of the natural assets.
- Allowing traditional ways of living based on the nature.

Biodiversity opportunities for sustainable business

Risks are insignificant or manageable

Transaction costs are acceptable

Positive NPVs and attractive IRRs

TERION

Local culture preservation

Income improvement and job generation

Increase access to technical assistance

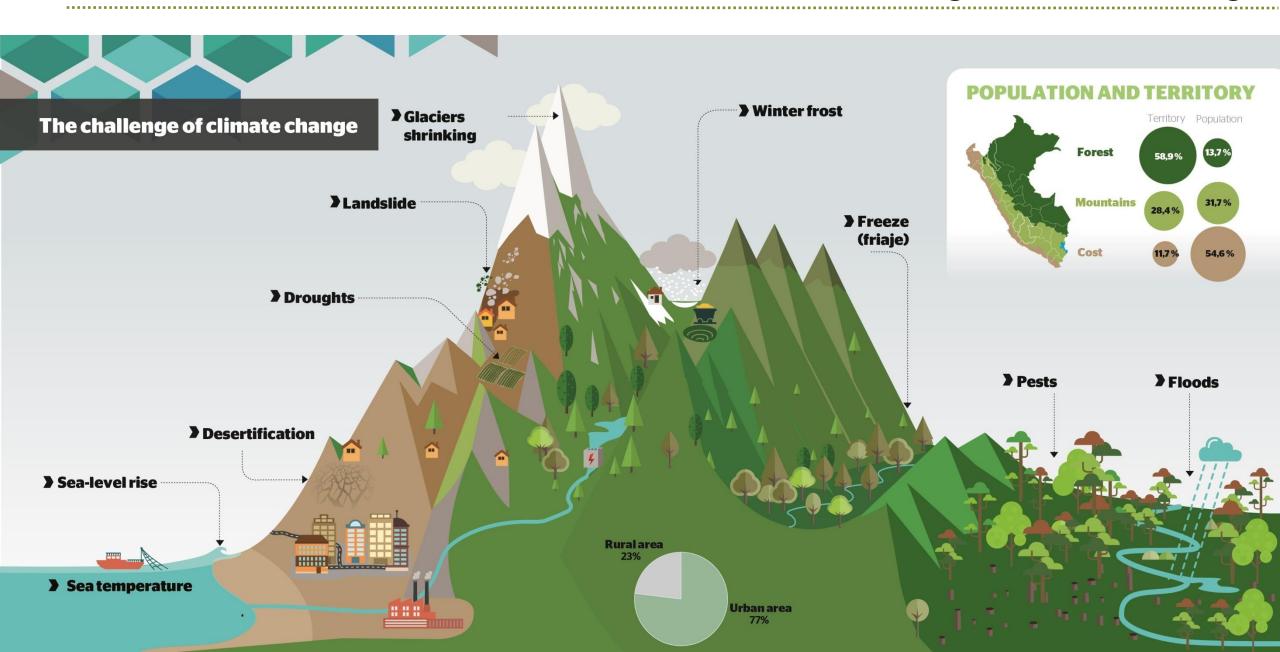

Forest cover improvement

Rational use of water

Positive or neutral effects on biodiversity

Climate change: the challenge

How do we understand the challenges?

mitigation.

1) It is attractive for the private sector

Focus on promotion and management of environmental and social risk.

3) May need public investment

Complementary activities may be coordinated with the private sector.

4) It requires public investment

Local governments are likely to be involved.

2) It is attractive but without funding

Focus on financial structuring and risk

How do we deal with CC?

Resource Efficiency Carbon Reduction Value Creation

Opportunities and employment

Green growth

Adaptation measures

Mitigation measures

Tourism

Agriculture

Fishing

Mining

National Determined Contributions

Thank you!
