

SURINAME

Priority needs for international collaboration

Research, inventory and monitoring

- Prepare a regional plan that outlines regional priorities, activities and programs, and needs for research, inventory and monitoring
 - Formalize marine research
 - Research on (medicinal) plants and herbs
 - Upscale population studies for monitoring of esp. indicator species

Capacity building

- Promote regional collaboration in the training of personnel, and the movement of personnel throughout the region to strengthen the regional planning capacity in all aspects related to the CBD
 - Governments to sign an agreement for e.g low airfares when it comes to building bridges that ultimately benefit the respective countries

Regional responses and recovery plans

- **Transboundary conservation of endangered and threatened species**
- **Transboundary pollutants and hazardous maritime traffic**
