

# Global Assessment

- What is the status of and trends in nature and in indirect and direct drivers of change?
- How does nature contribute to the achievement of Global Goals?
- What are the plausible futures for nature and for a good quality of life between now and 2050?
- What pathways and policy intervention scenarios can lead to sustainable futures?
- What are the opportunities and challenges, as well as options available to decision makers relating to nature and its contributions to good quality of life?

# The Author Team

**145 experts:**

**3 co-chairs**

**24 coordinating lead  
authors**

**87 lead authors**

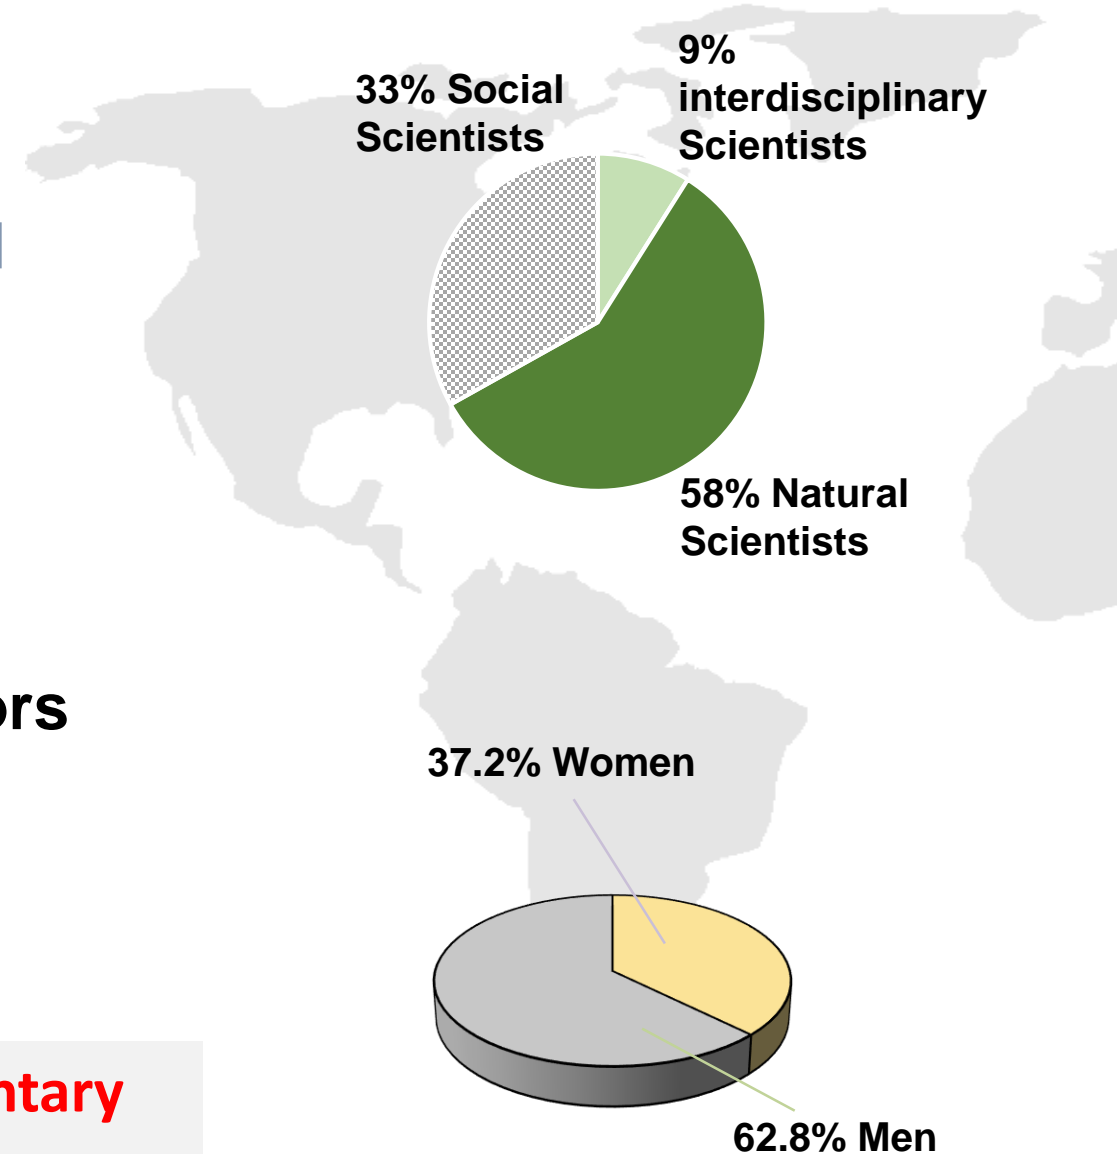

**15 review editors**

**16 fellows**

**350 contributing authors**

**From 51 countries**

**~156,000 Hours of Voluntary  
Hours = ~17 years**

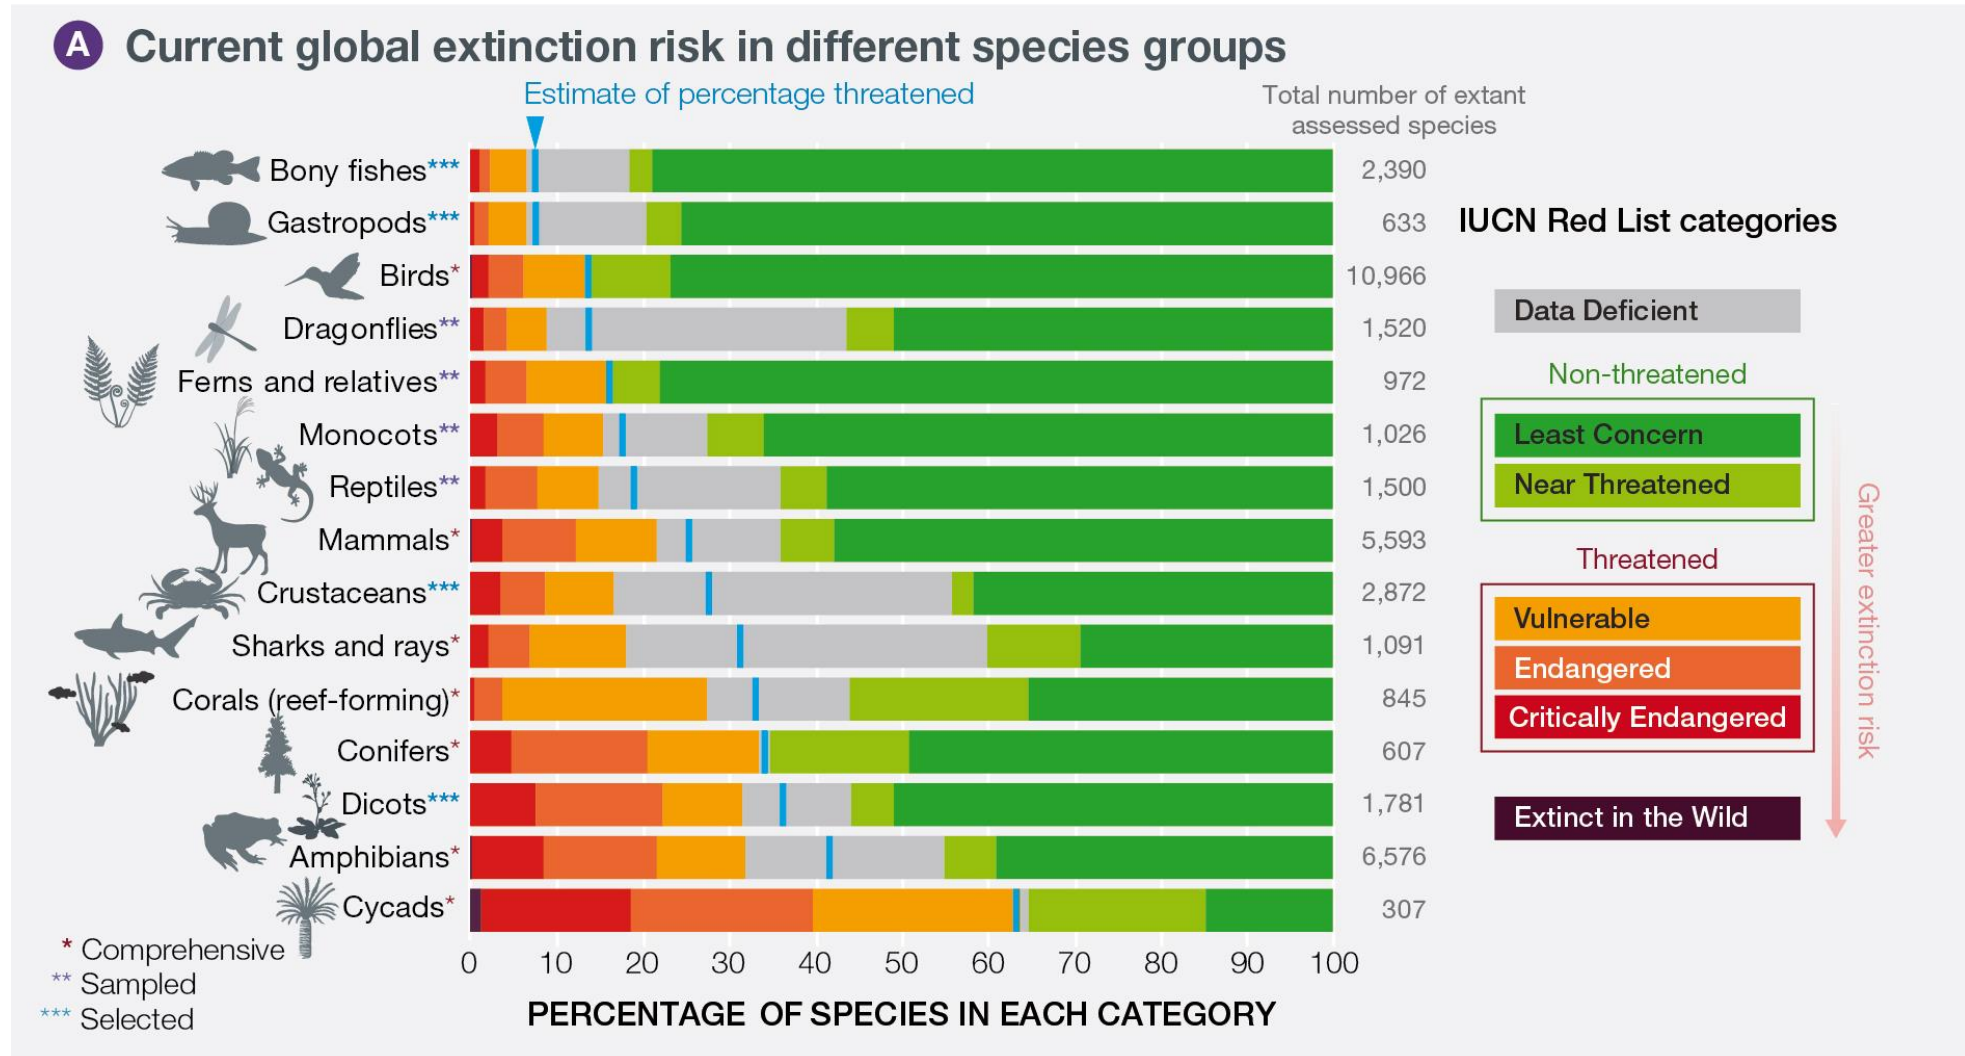

Life on Earth is deteriorating  
fast worldwide.

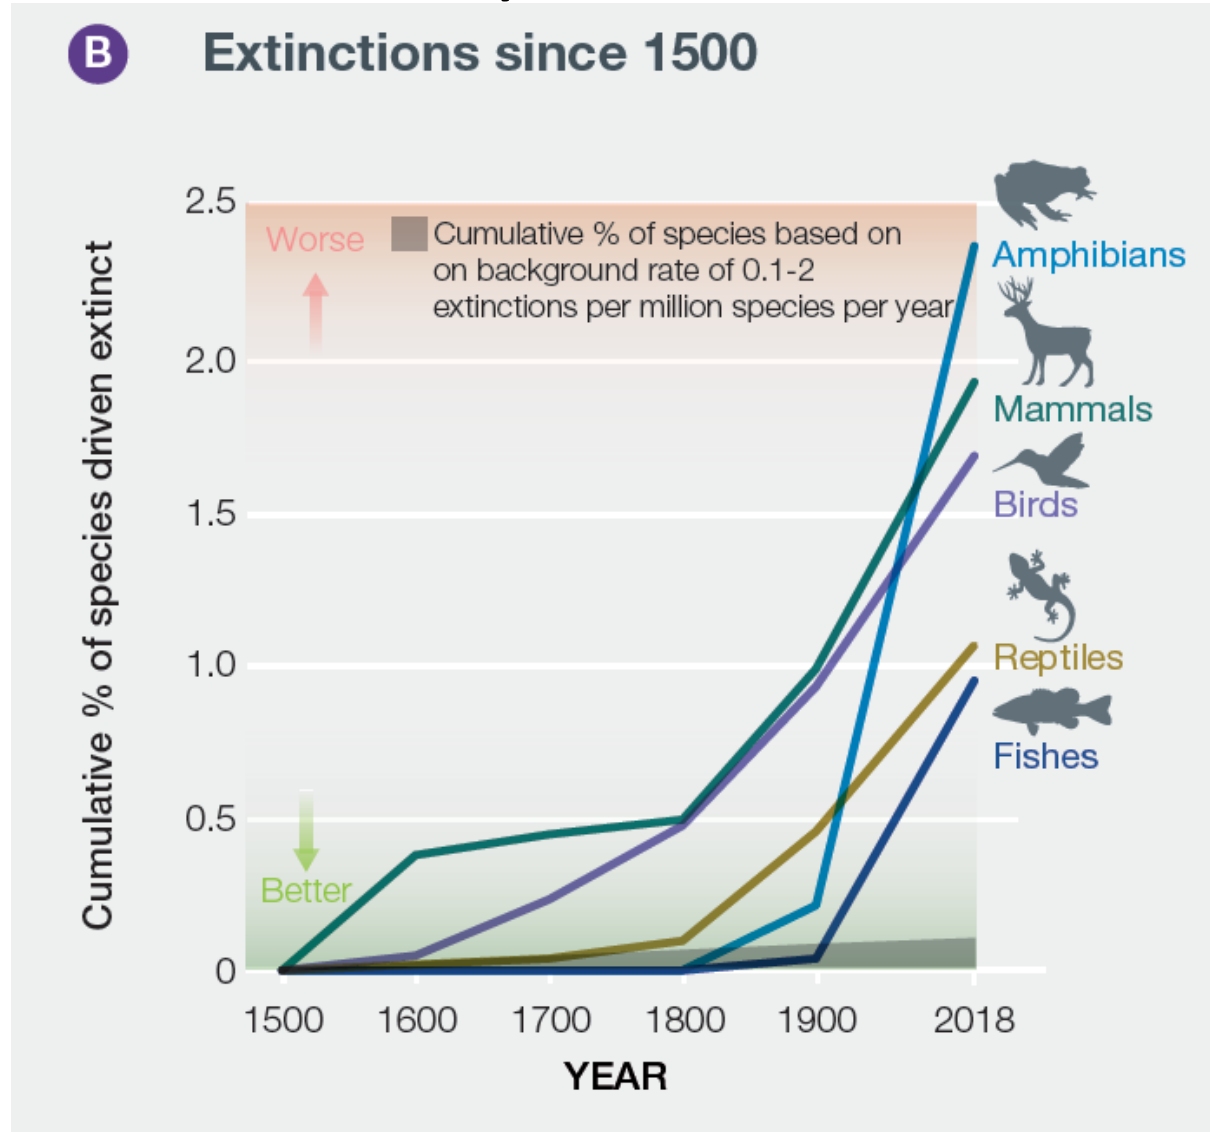

Virtually all indicators of the  
global state of nature are  
decreasing:

biomes, ecosystems, species,  
varieties and breeds

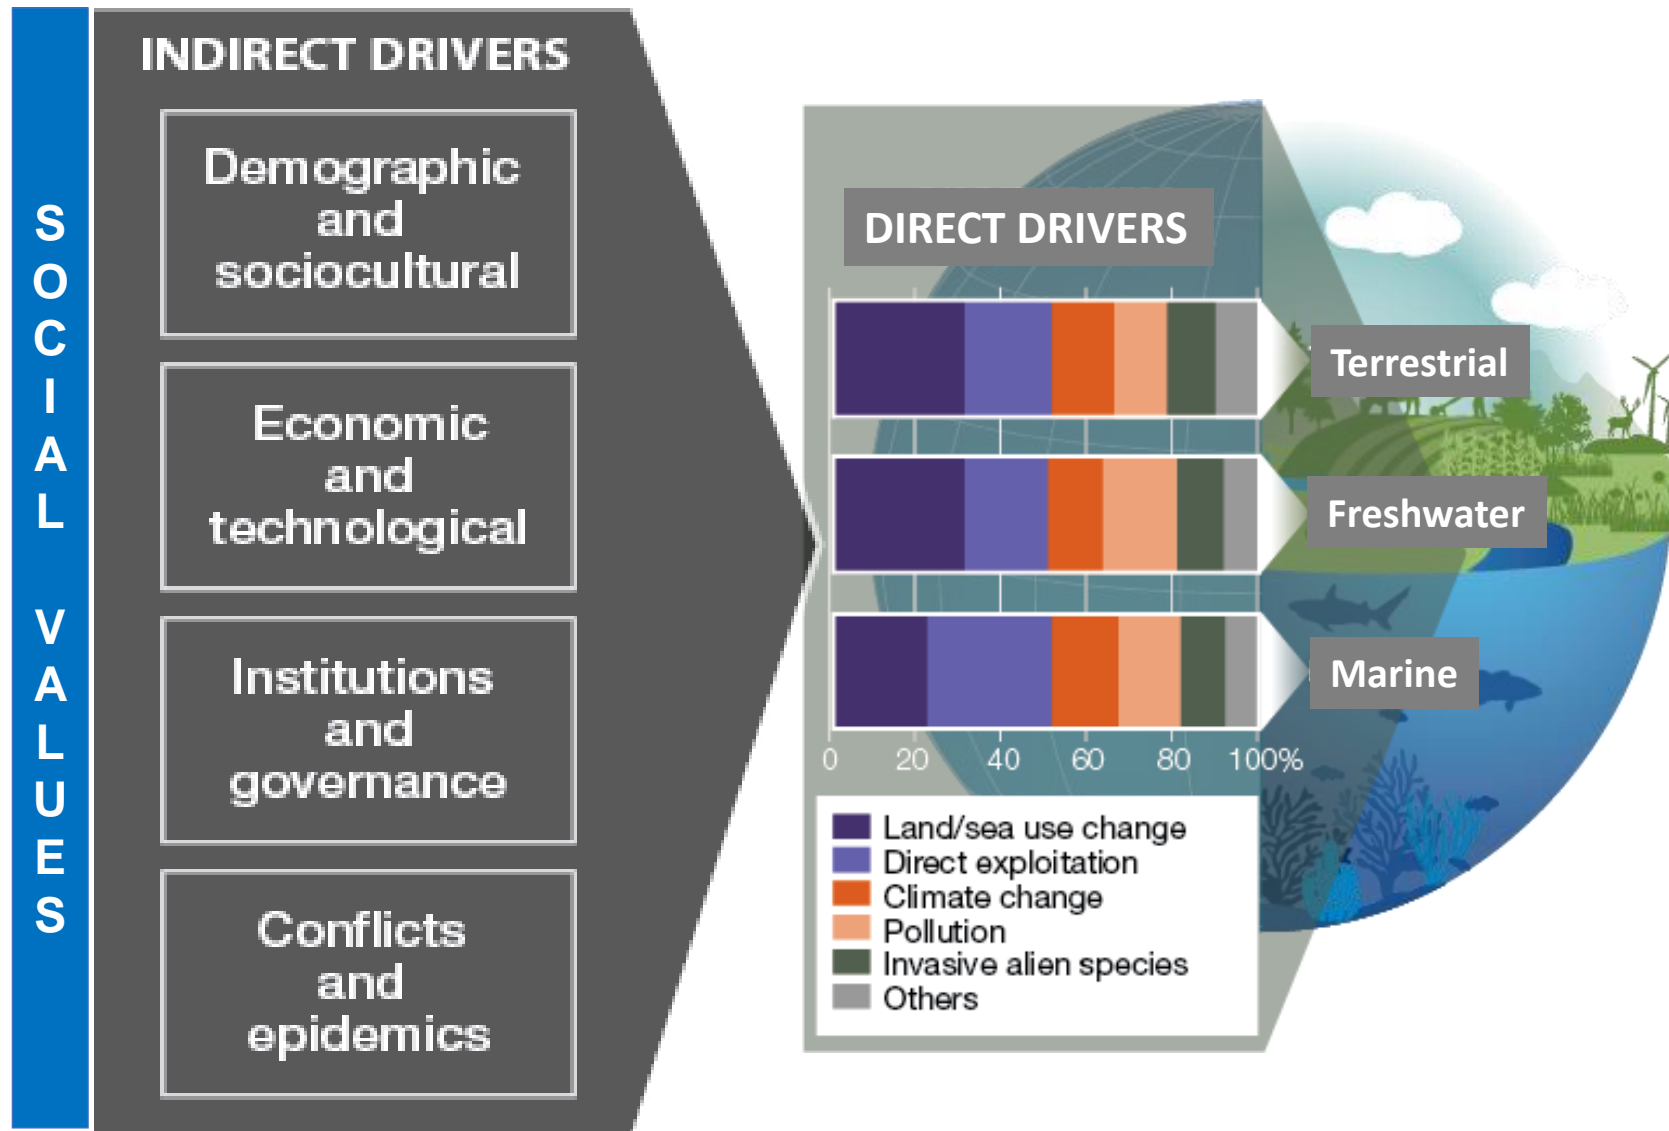

# More species of plants and animals are threatened with extinction now than at any other time in human history

More species of plants and animals are threatened with extinction now than at any other time in human history

Underpinning the proximate causes of deterioration in nature are the root causes, or **indirect drivers of change**.

Most of the assessed categories of **nature's vital contributions to people** are **declining** globally since the 1970s

Only the production of food, energy and raw materials has increased

\* There were no targets that were scored as good/positive status and trends

# **Plausible futures**

## **SCENARIOS**

### **Economic optimism**

- rapid economic growth
- low regulation

### **Regional competition**

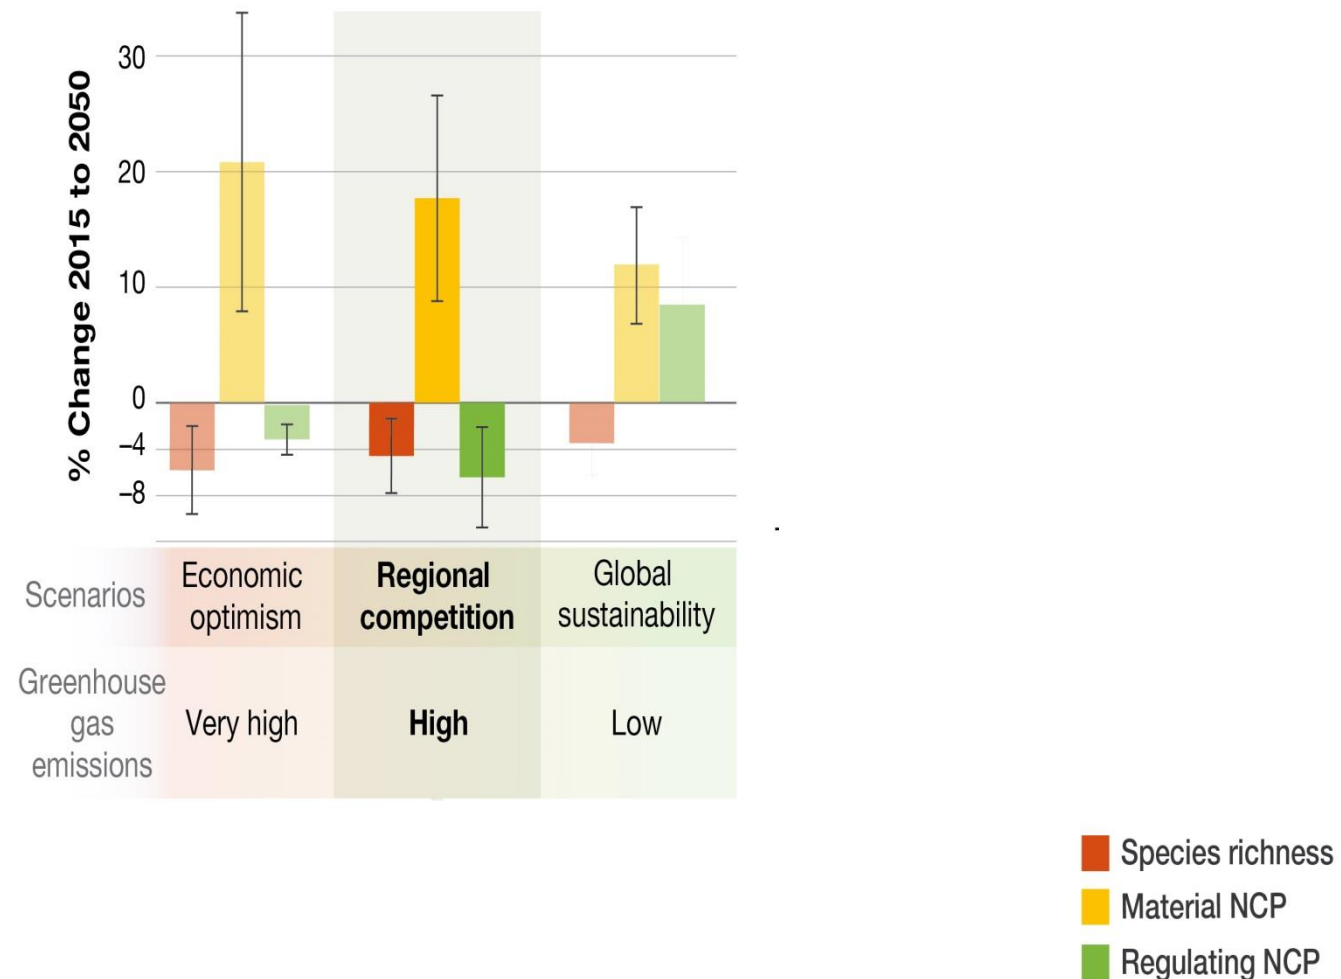

- strong trade and other barriers
- growing gap between rich and poor

### **Global sustainability**

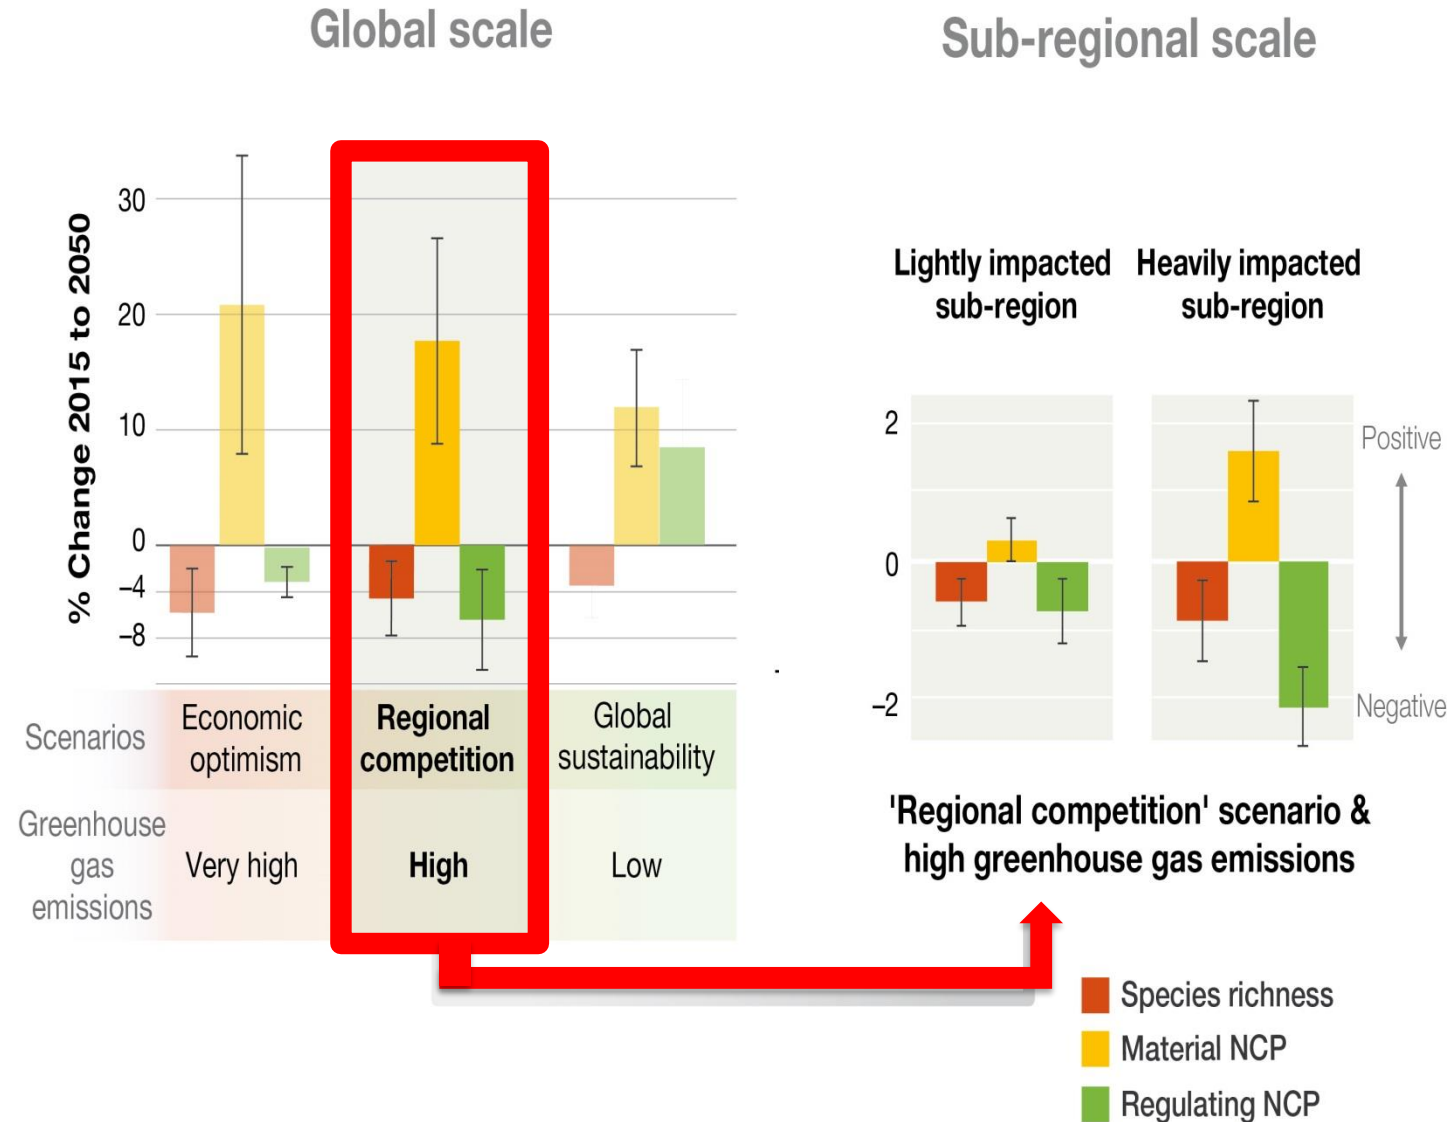

- Proactive environmental policy
- Sustainable production and consumption

# Projected changes in biodiversity and nature's material and regulating benefits, due to climate & land use change by 2050

Global scale

# Projected changes in biodiversity and nature's material and regulating benefits, due to climate & land use change by 2050

Other plausible scenarios, which include transformative change, are compatible with the 2030 sustainability objectives and the 2050 Vision for Biodiversity.

# Contributions of Indigenous Peoples and Local Communities: knowledge, innovations, practices, and institutions

➤ 25% global land

➤ 35% highly conserved ecosystems and 35% of Protected Areas

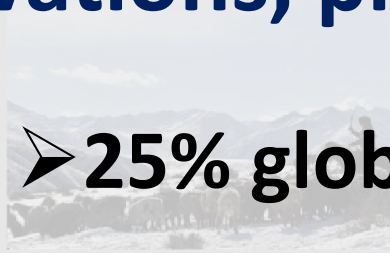

➤ Agrobiodiversity

➤ Nature is declining less rapidly (450+ indicators used by local communities)

➤ Yet, 72% of local indicators show decline

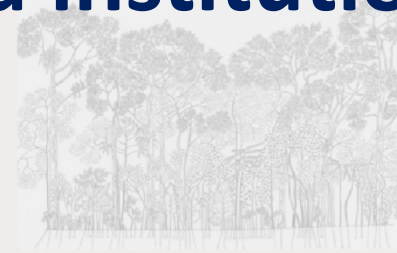

a Domesticating and maintaining crops...

b ... and animal breeds

c Creating cultural landscapes with enhanced habitat heterogeneity

d Developing production systems with a multitude of domestic and wild species

h Preventing forest loss

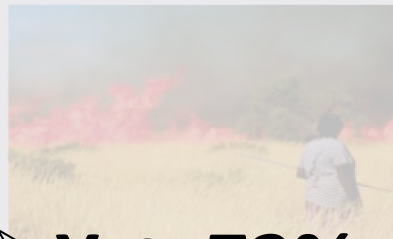

1) Land areas traditionally owned, managed, used, or occupied by indigenous peoples

3) Remaining terrestrial areas with very low human intervention (areas with <4 Footprint Index)

Approx. 35% of area 2)

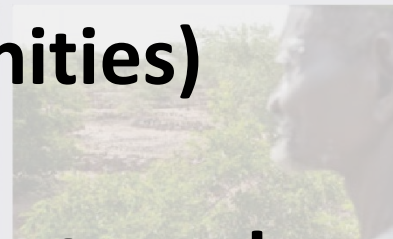

Approx. 35% of area 3)

e Sustainable land management

f Wildlife management

g Restoration

i Alternative values and worldviews

**We have dramatically  
reconfigured the fabric of  
life of the planet.**

**The world is becoming  
much more interconnected,  
yet increasingly unequal.**

Confronting the challenge of meeting international  
societal and environmental goals for the next  
decades

Key components for transformation

**Challenges related to climate change, nature deterioration and achieving a good quality of life for all are interconnected.**

**And, they need to be addressed synergistically, from local to global levels.**

**Food, water, energy, health, human well-being for all, mitigating and adapting to climate change, and conserving nature can be achieved together in sustainable pathways.**

**Need for rapid implementation of existing  
instruments and bold decisions for  
transformative change.**

**Knowledge and tools available**

**...**

**implementation!**

# Meeting global societal goals through urgent and concerted efforts addressing the direct drivers and especially the root causes (indirect drivers) of nature deterioration.

|                                |  |
|--------------------------------|--|
| <b>Governance</b>              | Align governance systems, both in the public sector (across admin levels for instance) but also across sectors |
| <b>Economic systems</b>        | Responsability, whole chain from production to consumption   |
| <b>Equity</b>                  | Inequalities are real, incorporate them actively in the planning and implementation                            |
| <b>Cross-sectoral planning</b> | We have better knowledge and tools   |
| <b>Incentives</b>              | Eliminate harmful subsidies, incentive positive externalities  |
| <b>Narratives</b>              | Individual level: wasteful consumption does not equal quality of life or status                                |
| <b>Societal values</b>         | Environmental degradation, social inequalities are not inevitable outcomes of economic growth                  |

Subset of solutions

# Cross-Sectoral, Integrated Management at Multiple Levels

→ Food production and conservation goals: complementary and interdependent.

→ Sustainable fisheries: integrated management on land, in freshwater and oceans

→ Land-based climate change mitigation: attention to trade-offs

→ Nature-based solutions in cities: crucial for global sustainability

**Recognizing the knowledge, innovations and practices, institutions and values of indigenous peoples and local communities and their inclusion and participation in environmental governance.**

**Enhances their quality of life, as well as nature conservation and sustainable use, relevant to broader society.**

**A key constituent of sustainable pathways is the evolution of global financial and economic systems to build a global sustainable economy.**

**One that steers away from the current limited paradigm of economic growth.**

**Many societal responses and successful examples, rapid transformative change is already happening in many sectors.**

**Bold actions and commitment from local to global levels urgently needed.**
