

Sustainable management of ASEAN Heritage Parks through valuing and improving eco-tourism

Choong-ki Kim(ckkim@kei.re.kr)

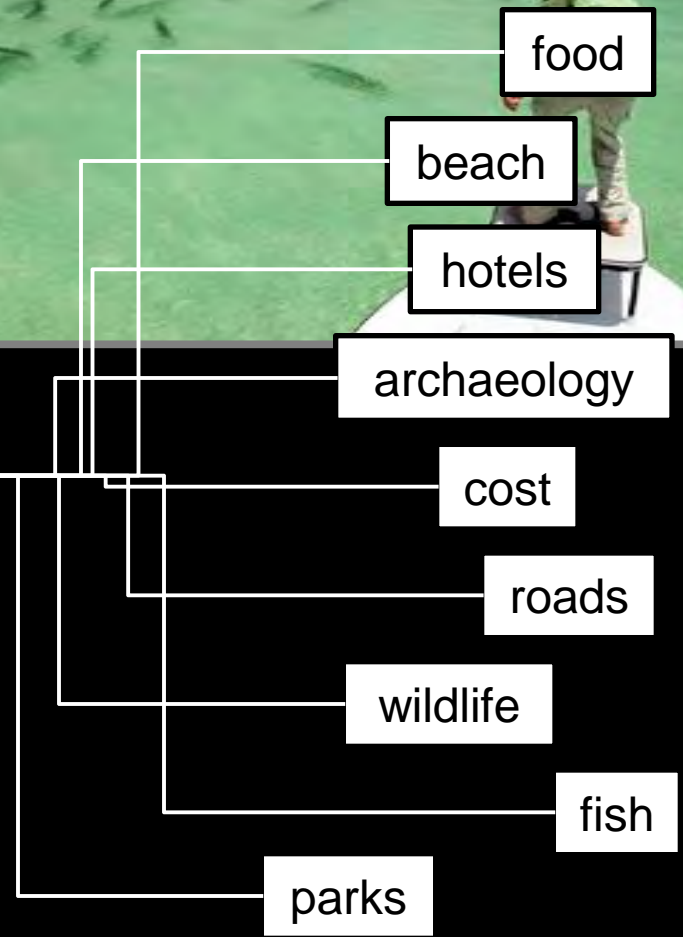

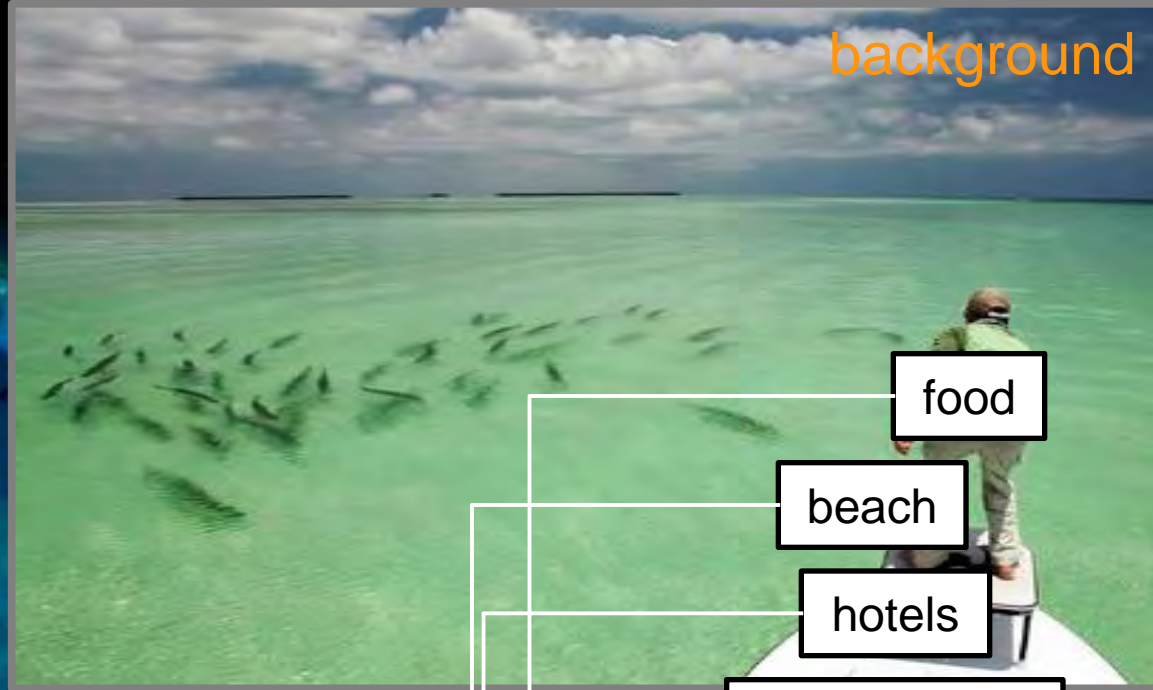

Korea Environment Institute (KEI)
ASEAN Centre for Biodiversity (ACB)
Makiling Forest, Tarutao National Park

Background

- Eco-tourism is one of the most important ecosystem services, providing a powerful incentive for national and local economies which is also highlighted in COP13.
- ASEAN Member States declared ‘**ASEAN Heritage Parks(AHPs)**’) to increase effectiveness of management, including eco-tourism, on certain protected areas with high conservation importance.

Location of 37 AHPs

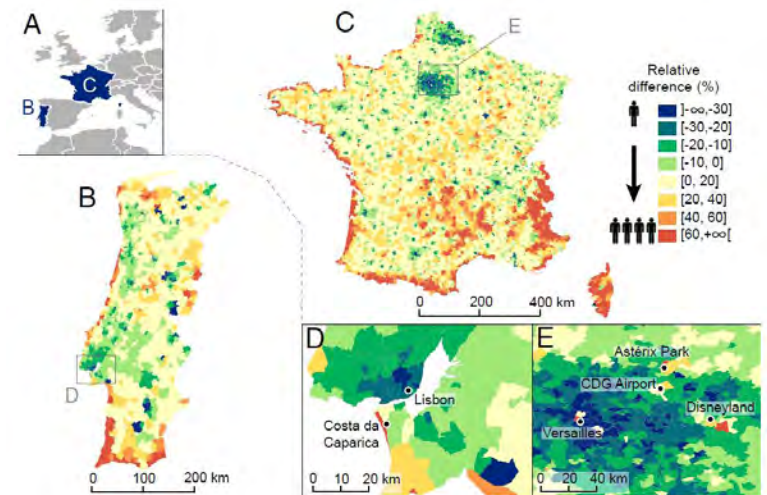

Where? Why?

Background

- However, due to lack of data, it is a challenge to monitor eco-tourism and set specific management plan for eco-tourism in AHPs.

⇒ ASEAN Centre for Biodiversity(ACB) asked for a science/technology-based approach that can be easily utilized in AHPs to assess status of eco-tourism.

Dynamic population mapping using mobile phone data

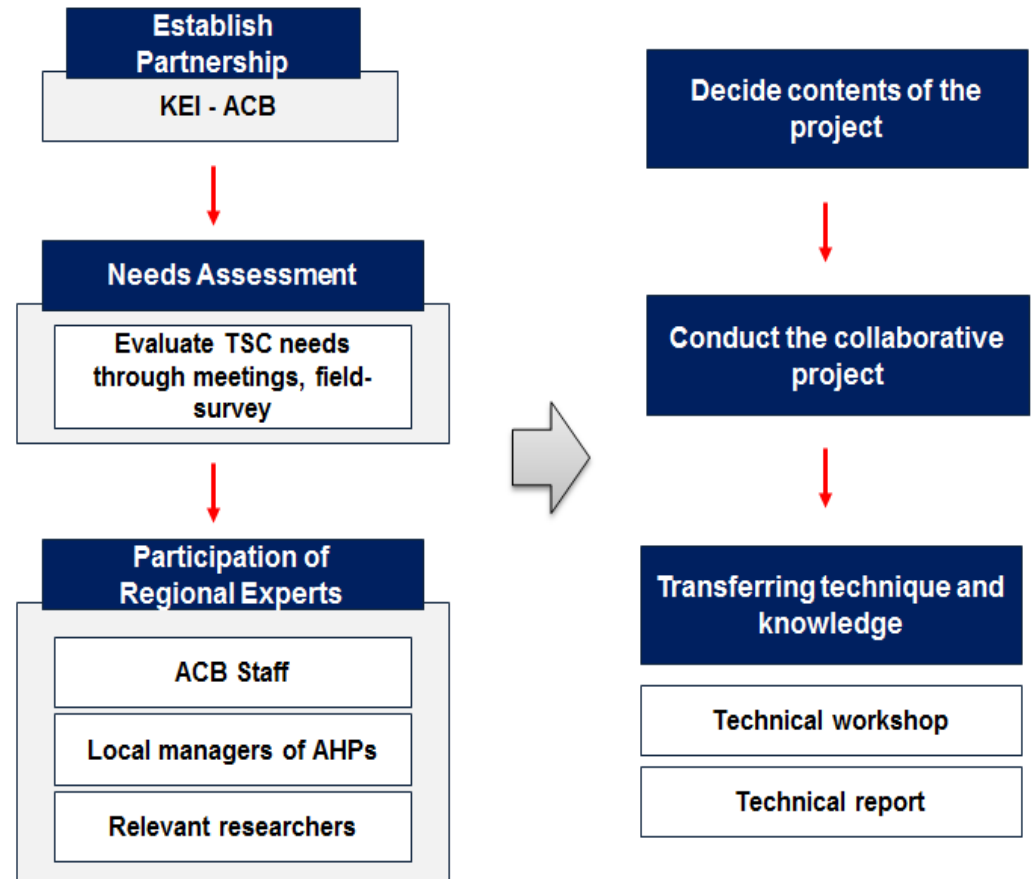

Deville et al. 2014

Objectives

- Korea Environment Institute (KEI), in collaboration with ASEAN Centre for Biodiversity (ACB), will apply an **innovative modeling approach using social big-data to examine the current status of management, and support the development of related management strategies encouraging eco-tourism** that enhances cultural services in AHPs.
 - ⇒ Measuring and mapping **the value of nature-based tourism & recreation** to a place
 - ⇒ Understanding what characteristics of the ecosystem **attract tourists or deter them from visiting**

Key strategies to implicate BBI's objective

- A. Facilitate the linking of needs through **effective partnerships** between KEI and ACB
- B. Participation of **regional experts**
- C. **Transferring techniques and knowledge**

Contents of the project

Transfer technologies and knowledges to assess the current status on eco-tourism in AHPs

Technical modeling on the status of eco-tourism using social big-data

Field study(based on questionnaires) to evaluate status of eco-tourism

A training workshop on modeling technique and best practices in eco-tourism management

Support to develop strategies for sustainable management

Key strategies to implicate BBI's objective

Field-survey in AHPs (Mt. Makiling, Philippines)

Exploring needs on management of AHPs
with local institutions(ACB) and local experts

Confirmed project sites

The research project will be piloted in two sites, namely:

- 1) Mt. Makiling Natural Reserve, Laguna Province, Philippines
- 2) Tarutao National Marine Park, Satun Province, Thailand

Mt. Makiling

Tarutao Park

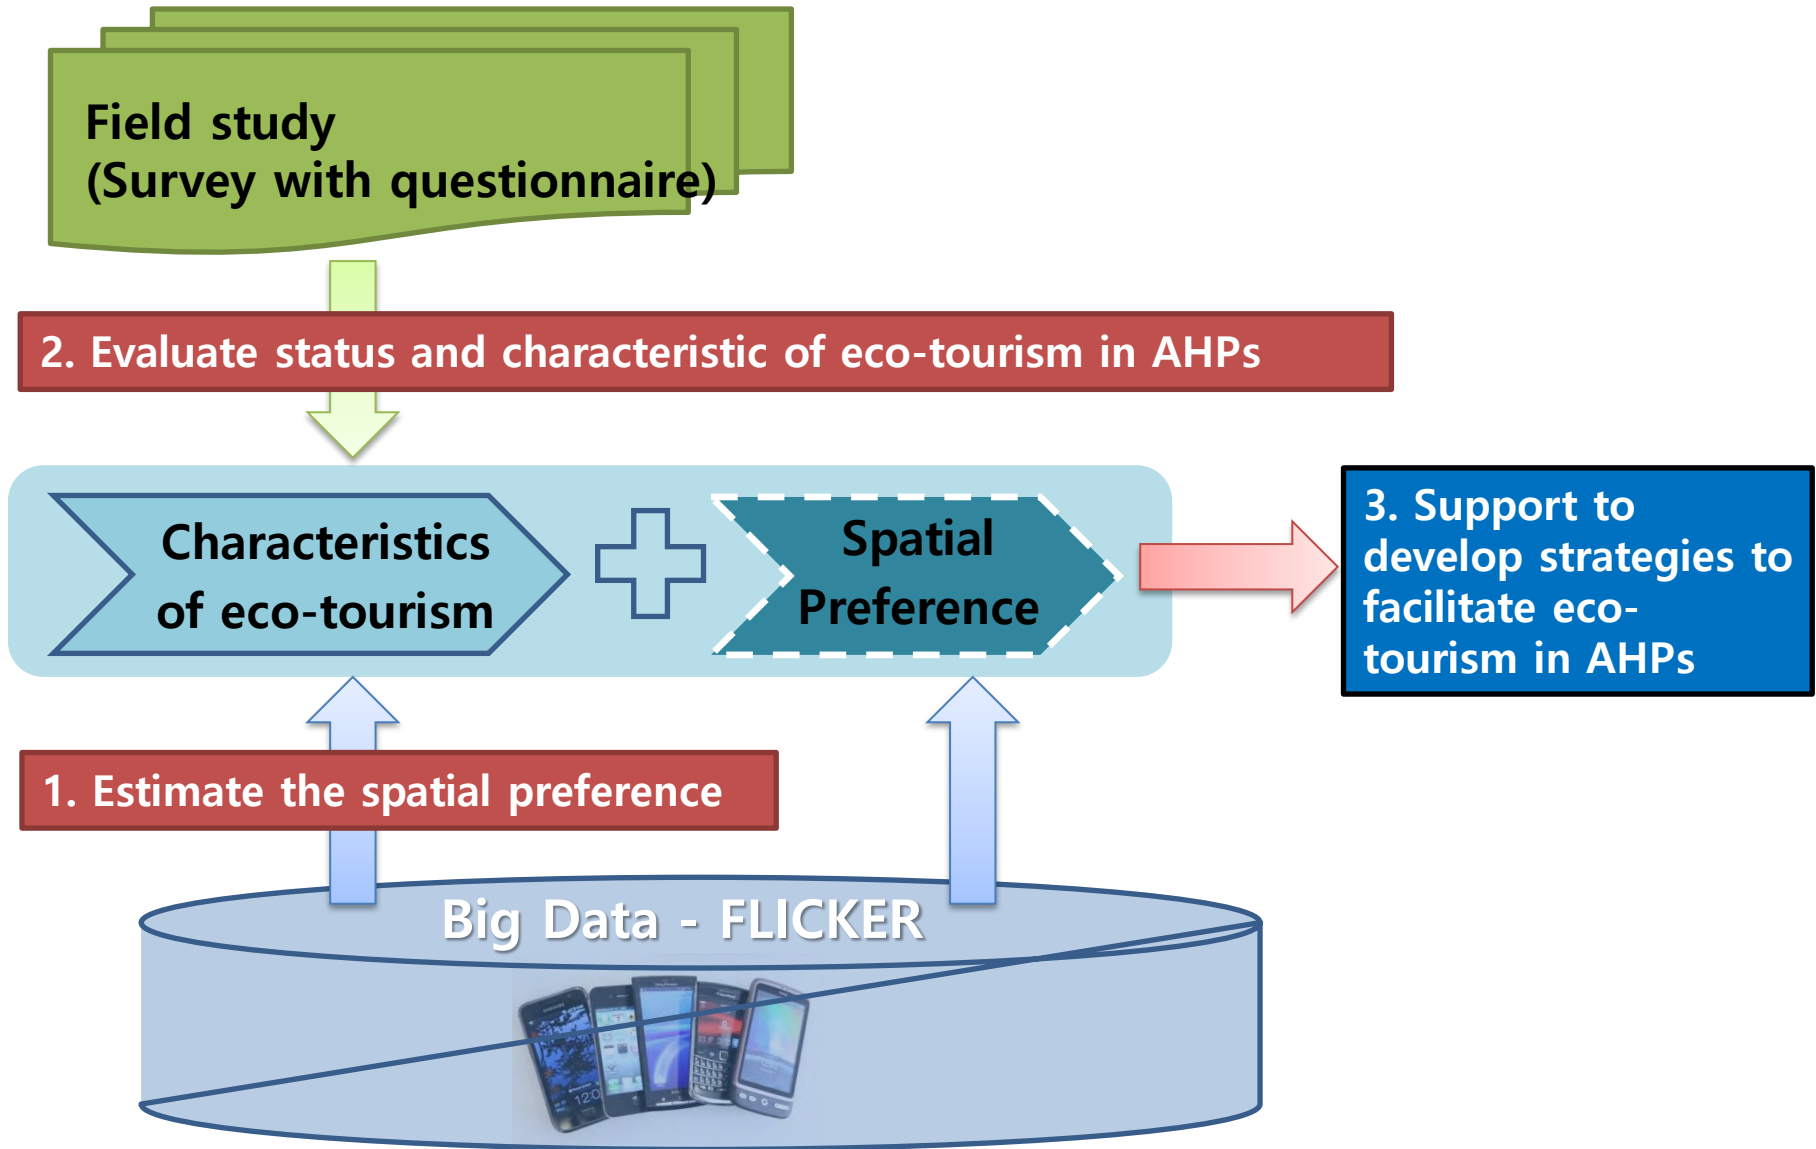

Transferring technologies and knowledges

Technical Workshop in Bukhan National Park, Republic of Korea

Transferring techniques to use social big-data to assess spatial preference
Identifying elements that need to be improved based on field study
Introducing Korea's management strategies of national park

A Framework to evaluate eco-tourism in AHPs

This led us to searching for a **global data source** on visitation that we could use as a response variable to measure the effect of natural and other attributes in any location

proxy data

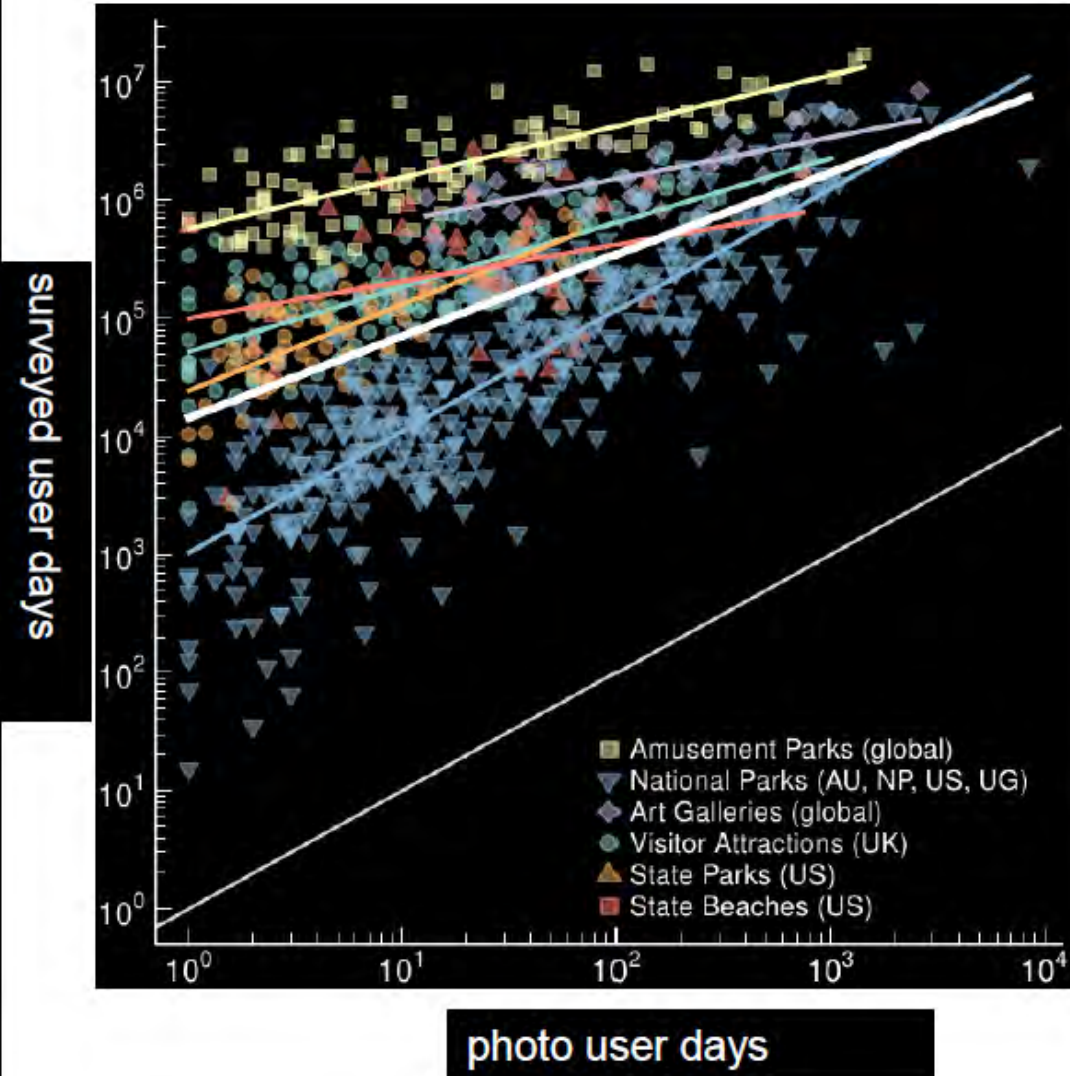

flickr photos

n = 200 million

Compared photo-visitation rate against surveyed visitation rate at over 800 worldwide and found a correspondence.
(Wood et al. 2013, Science Reports)

proxy data

Drivers of Visitation

Accessibility:

Natural Attractions:

Built Infrastructure:

Evaluating spatial preference using social big-data

(1) Identifying ranking of AHPs with higher preference in FLICKER

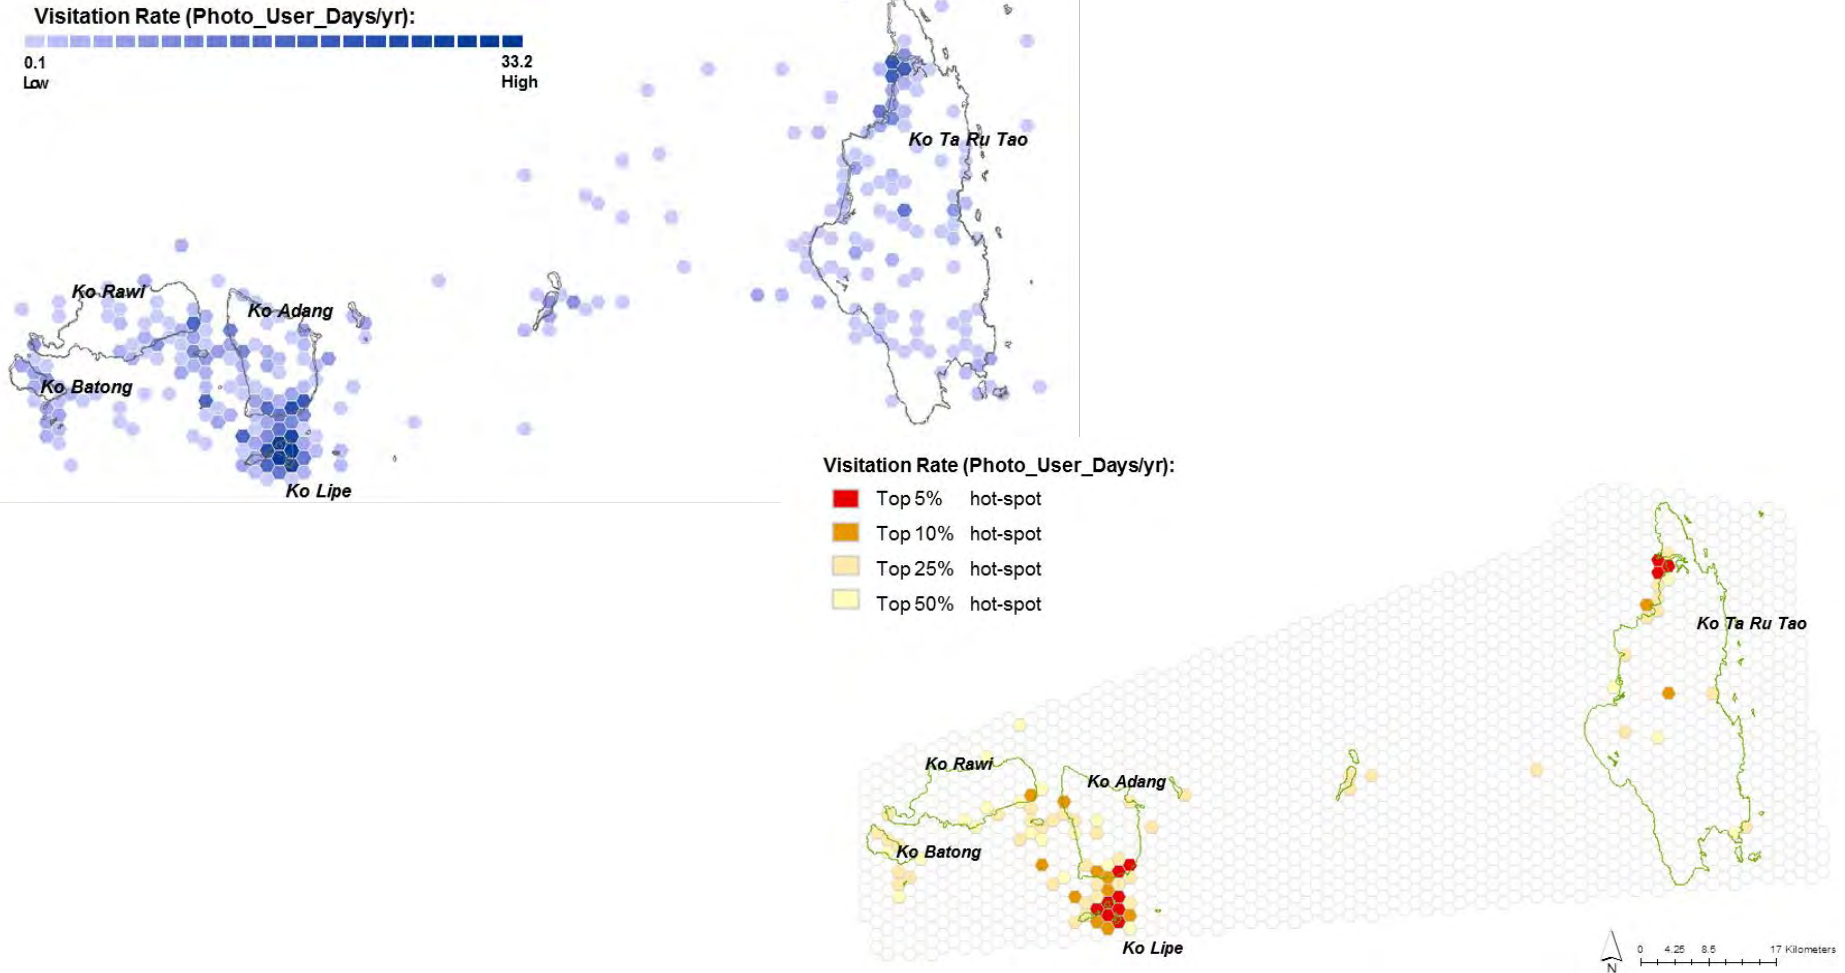

Top 12 AHPs with highest 'PUD per park area'

Support to analyze trend of eco-tourism after designating AHPs

Evaluating spatial preference using social big-data

(2) Identifying specific visiting characteristics

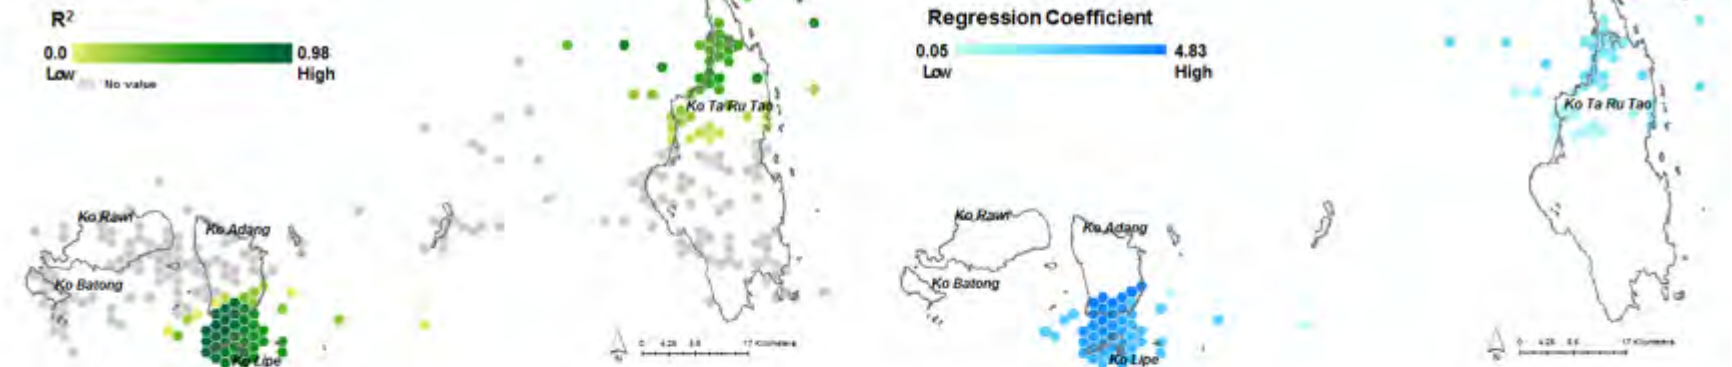

Providing spatial characteristics that show frequently visited area

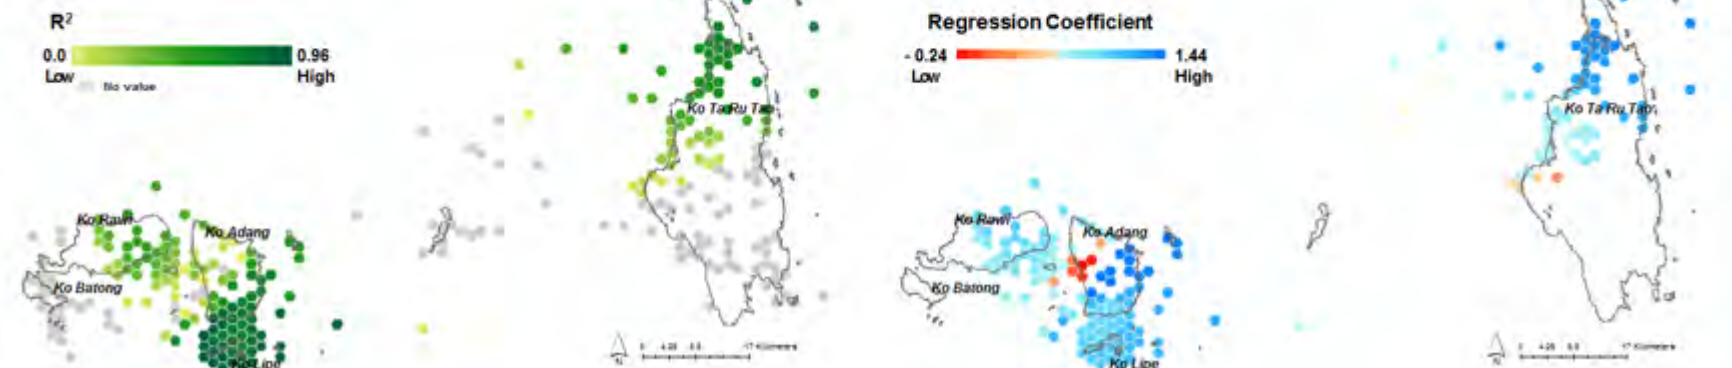

Evaluating spatial preference using social big-data

(2) Identifying specific visiting characteristics

(a) Artificial Attraction

(b) Artificial Restaurant

Providing impact of amenities to spatial visitation pattern

(c) Artificial Hotel

(d) Natural Attraction

(e) Natural Camping

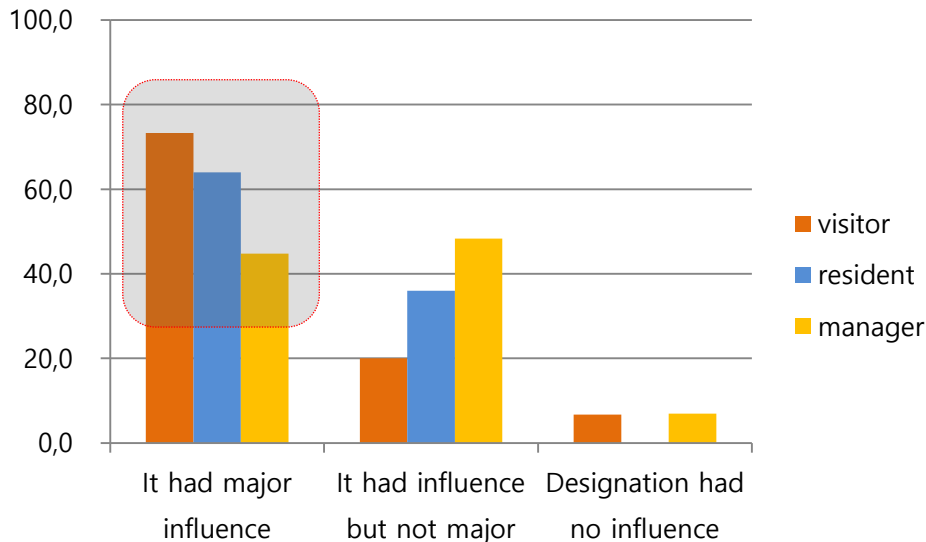

Identifying specific characteristics of eco-tourism

- Through the discussion between KEI's experts and regional experts, three questionnaires were developed for visitor, regional community, and manager
- Regional AHPs managers supported field survey to collect questionnaires
- Total number of respondents: (1) Makiling - 100 (2) Tarutao - 142

(3) Effectiveness of AHPs to eco-tourism among two national parks

Makiling AHPs

Tarutao AHPs

Among (1) biological, ecological value (2) social, cultural value and (3) facility, designation of AHPs had major influence to increase biological and ecological value

Identifying specific characteristics of eco-tourism

(3) Visiting satisfactions of each attributes of eco-tourism

Makiling AHPs

Tarutao AHPs

- Regional AHPs managers supported field survey to investigate visitation satisfaction
- Total number of respondents: (1) Makiling - 100 (2) Tarutao - 142

Conclusion

- The places people visit reveal their preferences about natural environments.
- Use of social big-data made available to assess spatial preference, and AHPs managers were able to recognize where it needs to be well and newly managed.
- Within spatial data, results of field-study provide insights to identify status of eco-tourism to identify strong and weak elements.
- Transferred technique, knowledge, and result of the BBI pilot project can be further utilized in management of AHPs to effectively implement Aichi Target 1, 11, 14.

Lessons learned and recommendation

- **Process for the contract**

- The duration of project approval may vary from country to country.
- ASEAN Centre for Biodiversity required **SSAA** **rrrrrr** **r''''''** **''** **rrrr** **to initiate the project.**

- **Project period/Expansion of the project**

- As the project was conducted as pilot, project period was short.
- Project implementation plan and capacity building process should be designed as a long-term process.
- May need measures that **link the short project to long-term project** based **eppp** **''''''** **''** **dddddd** **dd**

- **Information on demand/supply**

- **fff rr** **ccc** **oo''''''** **''** **dddddd** **oo** **uucccc** **uu** **offered to develop the further TSC project.**

Further Request

- The project needs to be sustained in longer term to facilitate sustainable eco-tourism in all AHPs. **Transferred technique** ddd www eee uuuud eiiiiiii iii dddttt llee nnHH'' management.
- **More activities on capacity building** should be introduced. AHPs managers are the key actors of knowledge transfer.
- **Future study sites** need to procure as much big data as possible to produce effective results for eco-tourism program. ttt ooooooohHttttt ttttttt t ttttttttttt ttt gggggggggg of PUD among AHPs should be considered.

Thank You
(ckkim@kei.re.kr)
