ofrecidas al CF

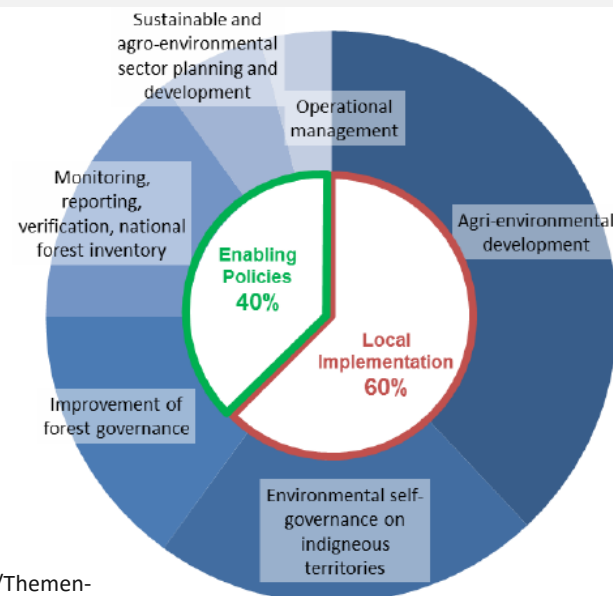

Pais*	Descripción
Chile (5 regiones)	Program takes action to address the three main drivers of deforestation and degradation: illegal logging, forest fires and replacement of native forests by exotic plantations.
Costa Rica	Program to achieving and sustaining carbon neutrality and contributing to poverty reduction by expanding an inclusive forestry and agroforestry-based development model. The program uses avoided deforestation activities and activities to enhance carbon stocks to target the drivers of deforestation: domestic demand for wood and the conversion to agricultural land.
México (5 Estados)	Community-Based Landscape Approach to Reduce Greenhouse Gas (GHG) Emissions aims at transforming the management of forests at the territorial level, and even goes a step further to take an integrated approach at the landscape level.
Nicaragua 2 regiones subnacionales	El PRE se apoyará en las políticas que impulsa el Gobierno, desde la Estrategia Ambiental de Cambio Climático; la reconversión ganadera, la política de agricultura agroecológica; la protección y preservación de la biodiversidad, áreas protegidas y el Programa Forestal Nacional.

- donor countries have committed more than 100 Mio. USD in results-based finance to be implemented through the German REM Programme.
- The objective is to support the reduction of emissions from deforestation in the Colombian Amazon Biome, in alignment with the provisions of the UNFCCC.
- Payments under this agreement will be based on emission reductions for the period 2013 – 2017.
- The basis for REM benefit sharing is the investment portfolio developed by the Government of Colombia for the Amazon Vision Programme.
- A “stock-and-flow” approach that channels incentives to activities contributing to conservation (maintaining or en-hancing carbon “stock”) on the one hand, and to activities that directly address deforestation (i.e. the “flow” of emissions) on the other.

Deforestation in the Colombian Amazon 2000-2014 (annual deforested area, in hectare); compared to the reference level based on the historical average to be used by REM and the adjusted reference level as submitted to UNFCCC.

At least 60% of funds will benefit local actors. This share will go primarily towards benefiting smallholder farmers, forest-dependent communities and indigenous communities in the Agri-environmental development, Forest Governance and Indigenous Peoples pillars.

El fondo apoyará a los países en la búsqueda de enfoques basados en proyectos y programático de acuerdo con las estrategias y planes de cambio climático, así como las estrategias o planes de desarrollo con bajas emisiones, medidas de mitigación apropiadas (NAMA), planes nacionales de adaptación (PNA) y otras actividades relacionadas.

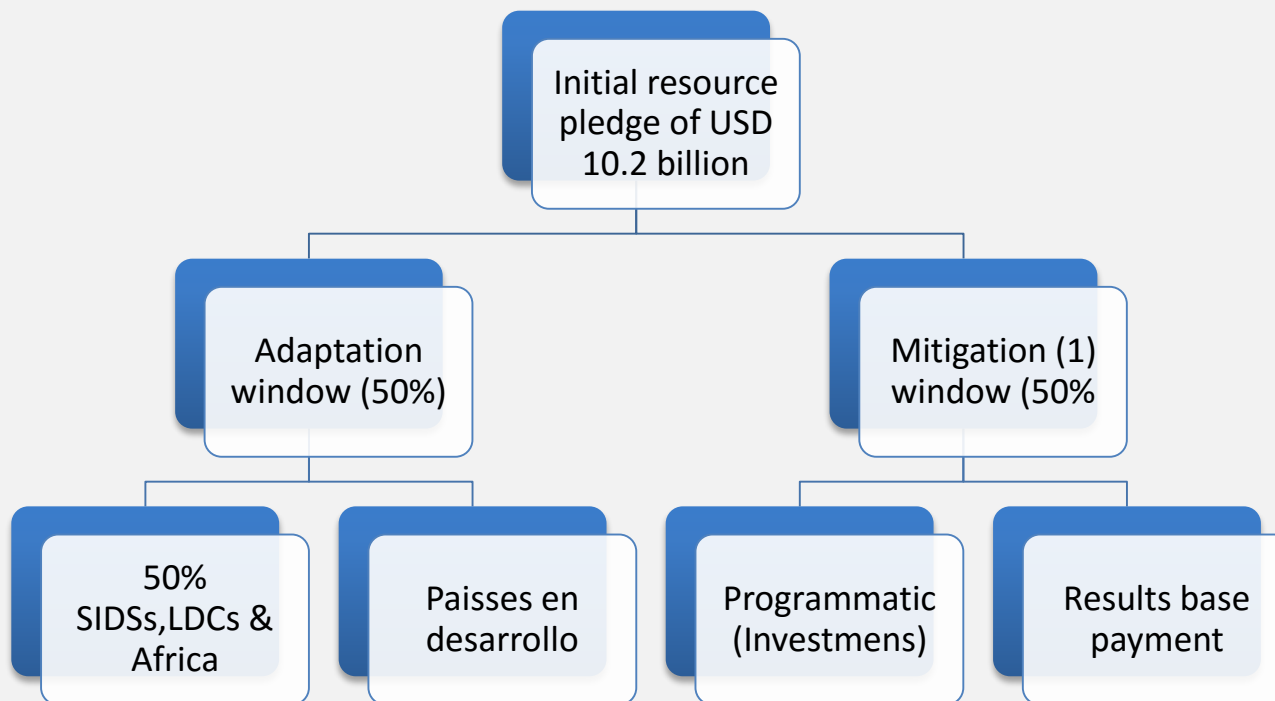

Áreas de Impacto Estratégicas

Reducir emisiones de:

Aumentar Resiliencia de:

(1) An integrated approach to funding mitigation and adaptation will be used to allow for cross-cutting projects and programmes.

El *pipeline* del GCF incluye 22 proyectos privados y públicos con un valor total de más de US \$ 5 billones.

- B12/07: Pide también a la Secretaría que proporcione un documento para su examen por el Consejo en su decimocuarta reunión, lo que permite la puesta en funcionamiento de los pagos basados en los resultados de las actividades que se refiere el CMNUCC de la decisión 1 / CP.16, párrafo 70, en consonancia con Convención de Naciones Unidas sobre el Cambio climático decisión 9 / CP.19 y de acuerdo con la Junta decisión B.08 / 08;*
