

Interactive group exercise:

Exploring complementarities between
NBSAP and REDD+ objectives

UNEP-WCMC

Exercise overview

Aim: to explore country perspectives on opportunities for and limitations to complementarities between NBSAP and REDD+ objectives

Time: 45 minutes (interactive exercise)
40 minutes (report back – 10 minutes for each group)

Set up: Participants will:

Be split into four groups

Each group will be asked a series of questions to help identify potential complementarities. Participants will note these down on coloured cards, which will then be posted on a flipchart. Links between different actions will be identified. Each group will also be asked to consider limiting factors to complementarities.

Each group will decide on a representative who will present the flipchart diagram as well as the main conclusions of the group

Questions for each group:

1. What components of your NBSAP could make a contribution to REDD+? (10 mins)
Note these down on the colour cards provided, using only one colour. Participants are encouraged to draw on components from as many countries as possible. Once the components have been identified, post them on the Flipchart table under the “NBSAP components contributing to REDD+ objectives” column
2. What components of your REDD+ strategy have relevance for biodiversity and your country’s commitments under the CBD? (10 mins)
Note these down on the colour cards provided, using only one colour. Participants are encouraged to draw on components from as many countries as possible. Once the components have been identified, post them on the Flipchart table under the “REDD+ components contributing to biodiversity/CBD objectives” column
3. Of the components identified under each of the columns, are there any that are clearly linked in terms of purpose and type/category of action? (10 minutes)
For components under NBSAPs and REDD+ which are clearly linked, draw a line between the components to match them. Groups may wish to draw stronger links with solid lines, and more indirect links with dotted lines.
4. What could act as limiting factors in terms of complementarities for the components listed on the flipchart? (10 mins)
Make a note of limitations on the flipchart using a pen
