

Governance and equity in conservation

Achieving Aichi Targets
11 and 12

Ashish Kothari, Kalpavriksh and ICCA Consortium

“governance” vis-a-vis “management”

management = *what* to do

governance = *who* decides what to do

management

- understanding a situation
- aims we wish to achieve
- actions to reach those aims
- monitoring achievement of aims

governance

- creating / running institutions of decision-making
- making & enforcing rules
- exercising and sharing power
- dividing responsibilities and functions

- For most of human history, **main decision makers and managers** of natural resources have been **indigenous peoples and local communities**
- A huge diversity of **management practices & institutions**
- Conservation by the **state/govt** more recent ... now ~13% of earth under formally designated **protected areas**, safeguarding many of world's important ecological and cultural sites

■ Conservation and people: a troubled relationship

- Official policies ignored community conservation knowledge and traditions, displaced or dispossessed them from resource base, created distrust, generated clashes and violence
- Rebound on conservation: retaliatory acts, non-cooperation with wildlife authorities, loss of local conservation practices
- Cultural/demographic changes in communities, loss of conservation ethos & practice
- **But... increasingly positive relationship of collaboration, recognition of community conservation, revival or new interest amongst communities**

Paradigm shift in conservation in last decade

- **IUCN World Parks Congress**, Durban (South Africa), 2003
- **7TH Conference of the Parties of the Convention on Biological Diversity (CBD)**, Kuala Lumpur (Malaysia), 2004

Clear message of WPC: Local communities matter

Two-thirds of the world's land occupied, used, or owned by indigenous peoples / local communities, with 80% of global terrestrial biodiversity

Nelson Mandela:

"I see no future for parks unless they address the needs of communities as equal partners in their development."

At 7th CBD COP (2004): Programme of Work on Protected Areas (POWPA)

Elements:

- n Planning, establishing, strengthening PA system
- 1. Governance, participation, equity and benefit sharing
- 2. Enabling activities (capacity building etc)
- 3. Standards, assessment and monitoring

Relevant provisions spread through PoWPA

governance

gender & social equity

1.1.4, 1.1.7, 1.2.1, 1.4.1, 1.5.6

2.1.1 to 2.2.7

3.1.2, 3.1.4, 3.1.6, 3.5.2, 3.5.4

4.2.1, 4.4.2

decentralisation

culture

co-management

Indigenous & community conserved areas

benefits & incentives

private protected areas

customary use

prior informed consent

rights & responsibilities

poverty reduction

participation, involvement

World Parks Congress Sydney, Nov.2014

- world's largest gathering of conservationists
- more than 6,000 participants of 170 countries (PA officials, NGO workers, activists, politicians, business persons)

8 streams

Stream 6: Enhancing the Diversity & Quality of Governance

Stream 7: Respecting Indigenous & Traditional Knowledge & Culture

Conservation & development

Complementarity of approaches?

Synergies?

from PA islands to
conservation landscapes

Isolated protected areas

Conservation areas with buffer
zones around them

linear connections between
protected areas = biological /
ecological corridors

PA's embedded in landscape
with different types and
intensities of resource use

development perspective:
from segregation to integrated
territorial perceptions

PA as a "blind spot" : no
perceived connection with
development agenda

PA as service provider
(ecosystem functions)

PA expected to generate
income via payment for
ecosystem services (i.e. water,
tourism, carbon storage)

PA's "claimed" by communities,
as part of their customary
territories / rights

Protected Areas: a shift of paradigms

1

As it was –

protected areas have been:

- ◆ planned and managed against local people
- ◆ run by central government
- ◆ “set aside” from mainstream concerns
- ◆ developed individually
- ◆ managed as “islands”

As it is becoming –
protected areas:

- ◆ run with, for and/or by local people
- ◆ run by many partners
- ◆ identified as essential for sustainable ecosystem functions.
- ◆ designed and managed as part of national & international systems
- ◆ designed & managed at landscape scale

Protected Areas: a shift of paradigms

2

As it was –
protected areas have been:

- ◆ established for biodiversity conservation
- ◆ focus on preservation and protection
- ◆ managed reactively within short term frameworks
- ◆ financed by the state

As it is becoming –
protected areas:

- ◆ are in addition, linked with a range of development objectives
- ◆ focus also on rehabilitation and restoration
- ◆ are managed adaptively in a longer term perspective
- ◆ are financed from diverse sources

in line with principles of CBD 's most relevant tool: Ecosystem Approach

Two key policy innovations on *governance* of protected areas

- **“quality”**
(*how* are PAs they governed?)

- **“types”**
(*who* governs the PAs?)

What is the *quality* of protected area governance? What is *equity*?

Equitable sharing of costs and benefits

Respect of *human rights*: no forcible displacement, no deprivation of essential livelihood resources without alternatives

Respect of *customary rights, tenure*, diverse *knowledge* systems

Central *involvement* of indigenous peoples / local communities

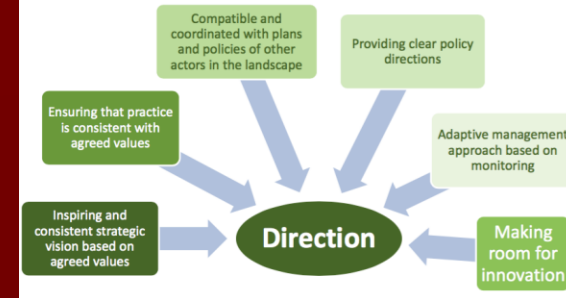

Transparency & accountability of PA authorities to the public

Principle of *subsidiarity* (those closest to resource are central to governing/managing it)

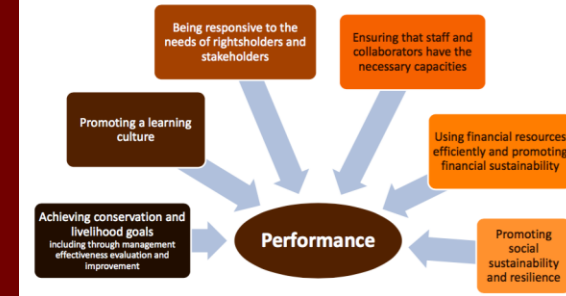

Applicable to each PA, and to PA system as a whole

Governance quality

2. Direction

3. Performance

4. Accountability

adapted from Lang & Lassen, 2015

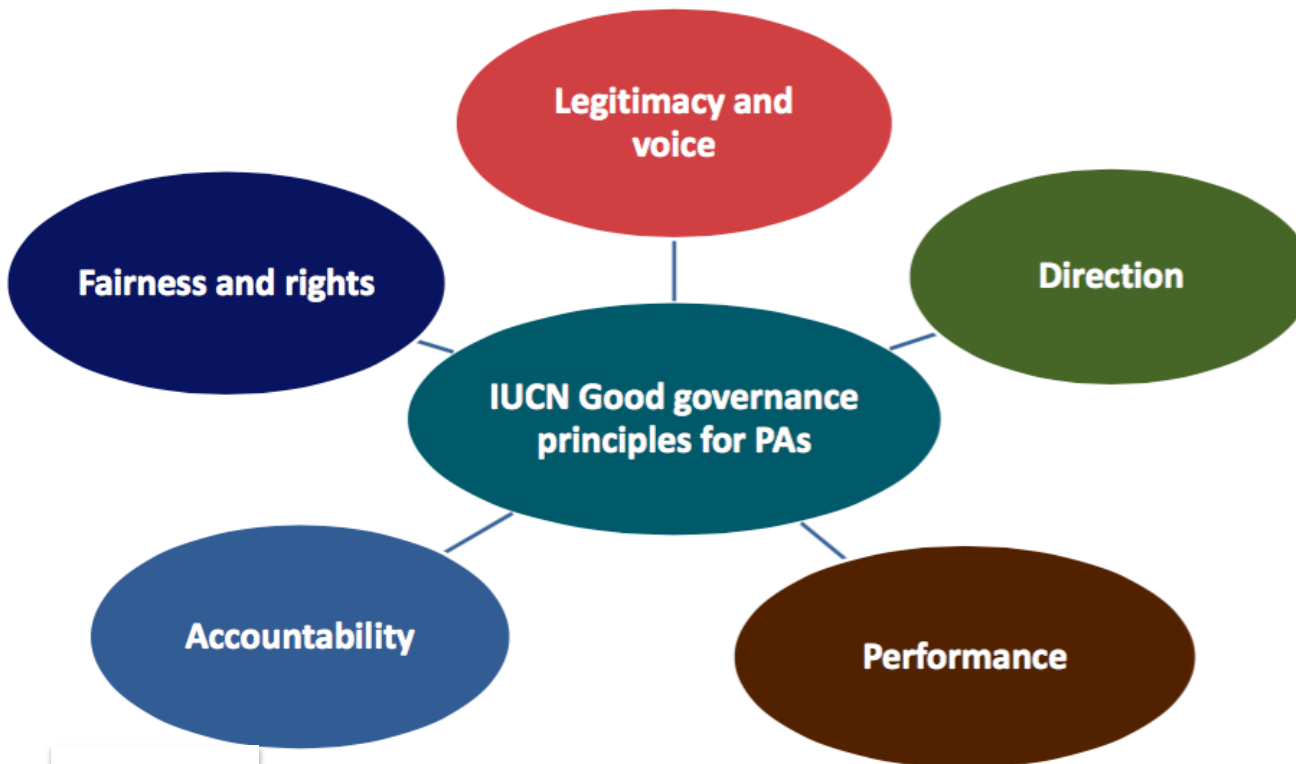

5. Fairness and rights

1. Legitimacy and voice

The IUCN principles of good governance for protected areas

Participation in PA decision-making : a continuum

(authority, responsibility and accountability)

NOTE: various intermediate stages, e.g. decisions predominantly by govt, some consultation with communities/individuals

This is *not* shared governance

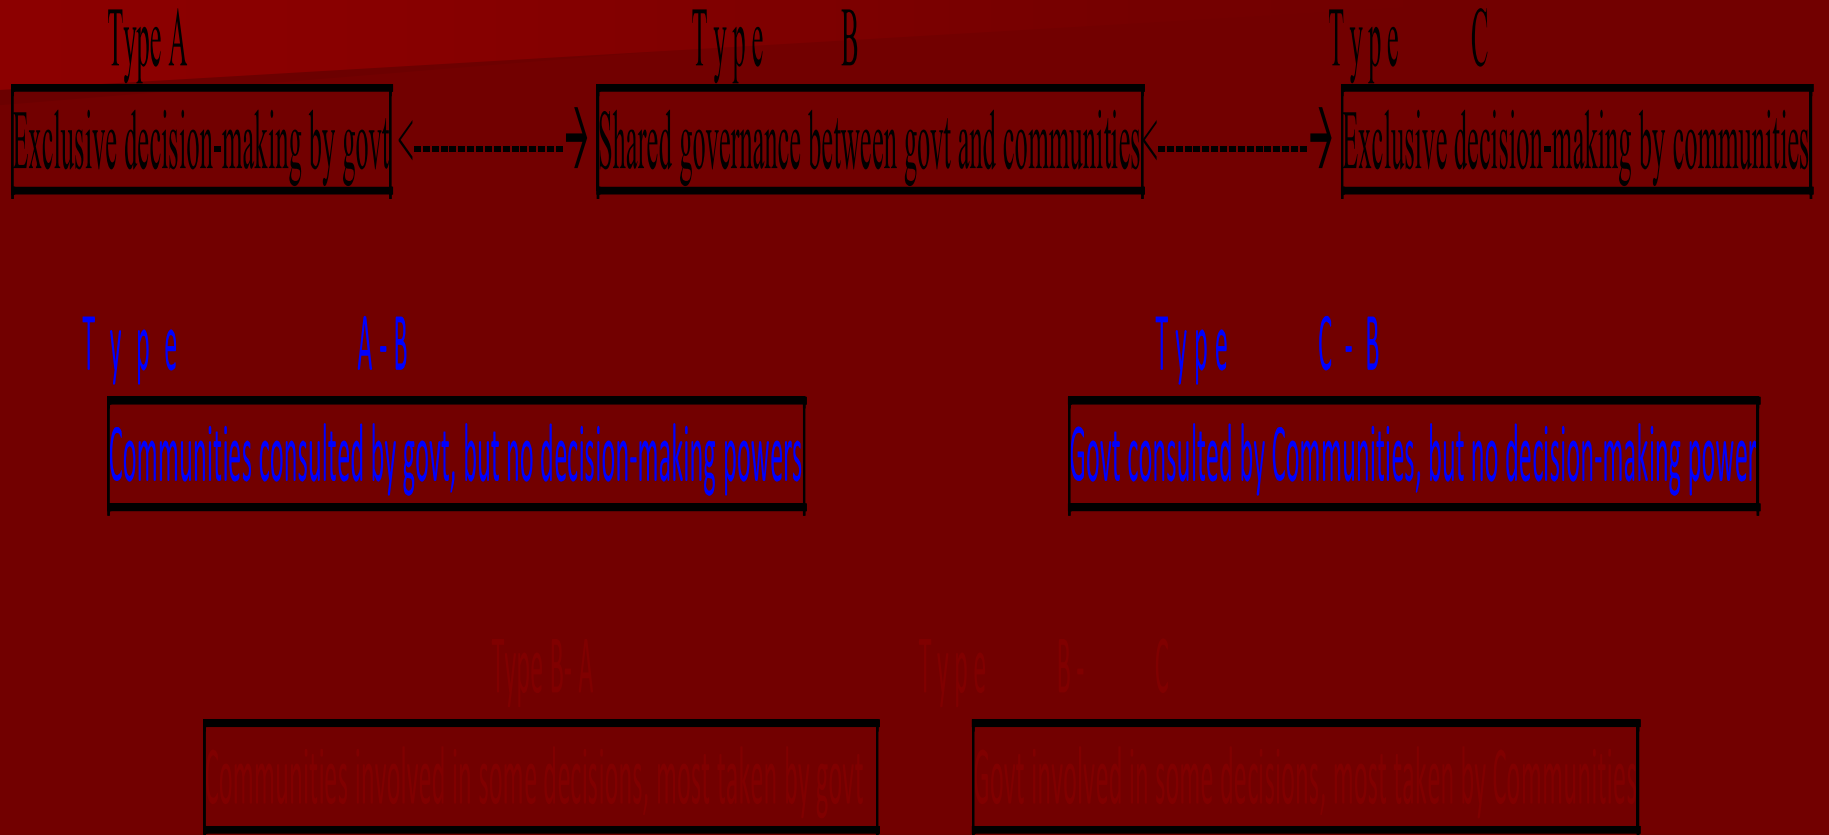

Group exercises

1. PA governance continuum
2. PA governance / management matrix

Part 1: PA Governance Continuum (for Individual PAs)

(Pl. mark the type where most of your PAs are situated; exceptions may pl. be noted below)

Key questions

For individual protected areas

1. Are communities involved in governance, including in management agency?
2. Are communities themselves governing PAs (recognized or unrecognized)?
3. Is free and prior informed consent of communities required by law?
4. Are the rights (to lands, territories, resources) of communities recognized?

For PA system

5. Are communities involved in the PA system as a whole (including in planning the system, designation of PAs, & their monitoring/assessment)?

Based on above...

7. What key changes are needed in law and practice?
8. What main next steps would you propose, and commit to?

Report back and discussions

- Overview of each country: current status of governance quality / equity
- Key recommendations towards more equitable, participatory PA system to achieve Aichi 11 & 12
- Main hurdles and opportunities
- Key follow up steps (country-wise & collectively)

WHAT IS *DIVERSITY* OF GOVERNANCE?

4 main “governance types” :

- A. government
- B. indigenous peoples and local communities
- C. private owners
- D. collaborative partners

all types are legitimate and important for conservation!

IUCN matrix of protected areas categories and governance types (2008 IUCN Guidelines)

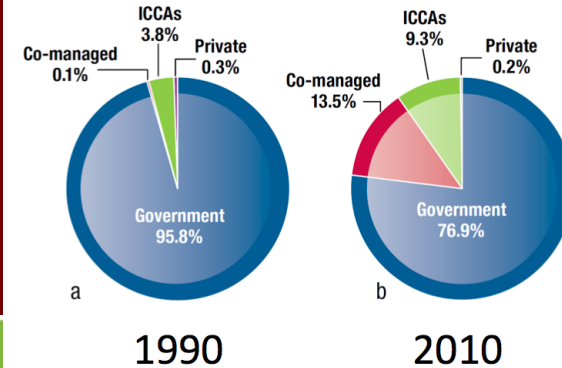

Governance type	A. Governance by Government			B. Shared Governance			C. Private Governance			D. Indigenous Peoples & Community Governance	
	Federal or national ministry or agency	Local/municipal ministry or agency in charge	Government-delegated management (e.g. to an NGO)	Trans-boundary management	Collaborative management (various forms of pluralist influence)	Joint management (pluralist management board)	Declared and run by individual land-owner	...by non-profit organisations (e.g. NGOs, univ. etc.)	...by for profit organisations (e.g. corporate land-owners)	Indigenous bio-cultural areas & Territories- declared and run by Indigenous Peoples	Community Conserved Areas - declared and run by traditional peoples and local communities
I - Strict Nature Reserve/ Wilderness Area											
II – National Park (ecosystem protection; protection of cultural values)											
III – Natural Monument											
IV – Habitat/ Species Management											
V – Protected Landscape/ Seascape											
VI – Managed Resource											

Buzz groups

- Can you think of a PA in Type B, C, or D?
- Tell your neighbour about it in a minute

Diversity of governance

Global protected area by IUCN governance type

Why promote governance diversity in a PA system?

Recognition of a diversity of management categories and governance types helps to:

- Achieve coverage targets
- Close gaps
- Build connectivity
- Involve more stakeholders and improve social acceptance
- Improve adaptability and resilience of the system

- National policies increasingly focusing on two under-utilised governance types:
 - **shared governance** (Co-managed Protected Areas)
 - **community governance** (Indigenous Peoples' and Community Conserved Territories & Areas)

Co-managed Protected Areas (CMPAs)

protected areas where **decision making power, responsibility and accountability** are shared between various actors, e.g. government, local communities, NGOs...

Widespread form of management ... the norm in Europe, Canada, Australia ... increasingly adopted in the Americas ... emerging in Asia and Africa...

Examples of CMPAs

- **French Regional National Parks:** municipal authorities, communities, NGOs, and private sector
- **Annapurna CA, Nepal:** national NGO and local communities
- **Community Reserves, India:** community & govt
- **Galapagos National Park:** local participatory management board to inter-institutional authority
- **Canadian national parks:** provincial government agencies and indigenous peoples
- **Kaa-iyá del Gran Chaco National Park, Bolivia:** national park service and Isoseno-Guarani indigenous people

Indigenous Peoples' and Community Conserved Territories & Areas (ICCAs)

"...natural and modified ecosystems including significant biodiversity, ecological services and cultural values voluntarily conserved by concerned indigenous and local communities through customary laws or other effective means..."

Oldest form of conservation...at times recognised by the state, most often not recognised

three defining characteristics of CCAs

- Specific indigenous peoples or local communities related to them culturally and/or because of livelihoods
- Such communities have the key power in deciding, implementing & enforcing management decisions (*by law, or in practice*)
- Community initiative is achieving conservation results — although intention may be for diverse reasons.

range of community conserved areas...

sacred
spaces &
habitats...

Sacred crocodile pond, Mali

Chizire sacred forest,
Zimbabwe

Sacred
landscapes,
Indian/Nepal
Himalaya

Forole sacred
mountain
Borana/ Gabbra
Ethiopia/ Kenya

range of community conserved areas...

indigenous territories and cultural landscapes/seascapes...

Caribou crossing site in Inuit territory, Canada

Alto Fragua Indi-wasi National Park, Colombia

Paruku Indigenous PA, Western Australia

range of community conserved areas...

territories & migration routes of nomadic herders / mobile indigenous peoples

Wetlands in Qashqai mobile peoples' territory, Iran

range of community conserved areas...

sustainably-managed wetlands, coastal areas, fishing grounds ...

Local marine reserves,
Philippines

Community protected wetland, Yilan, Taiwan

Mangalajodi, Odisha, India

Coron Island ancestral domain,
The Philippines

Lubuk Larangan river, Mandailing, Sumatra, Indonesia

range of community conserved areas...

sustainably-managed resource reserves (those with substantial wildlife value)

**Community forests,
Bangladesh, India,
Nepal, Thailand**

Qanats, Central Asia

Parc Jurassien Vaudois, Switzerland

Jardhargaon forest, Indian Himalaya

range of community conserved areas...

sacred or culturally protected species and their habitats

examples
from
India

range of community conserved areas...

community-established and managed protected areas held under common property in industrialised countries...

Ancestral territory of the Regole of Cortina d'Ampezzo (today Regional Park) Italy – 1000 years of recorded history!

American community forests...

What is the worldwide extent of ICCAs?

Hundreds of thousands of ICCAs, most undocumented

No overall figure of extent; some indications:

Place / kind of ICCA	Extent
Global: Indigenous/community managed forests	At least 370 m. ha.
Australia: Indigenous PAs	36 mill. ha.
Bolivia: TIOCs (peasant/indigenous territory)	12 mill. ha.
Fiji: Locally Managed Marine Areas	1.77 mill. ha.
Brazil: Indigenous reserves	Substantial part of 145 mill. ha.
Namibia: Conservancies	13.27 mill. ha
Philippines: Ancestral Domains	4.25 mill. ha

What is the worldwide significance of ICCAs?

- Conserve a wide range of ecosystems, habitats, species ... *could double the earth's PA coverage!* (Aichi 11, 12)
- Maintain critical **ecosystem services** (Aichi 11)
- Are the **basis of livelihoods and cultural identity** for millions of people
- Are built on **sophisticated ecological knowledge**
- Are **adaptively managed** through **site-specific institutions**

Shimshal Community
Conserved Area,
Pakistan

Setulang
river,
Indonesia

Walalkara Indigenous PA, Australia

Yet, ICCAs threatened & insecure (varying degrees in different countries)

Most ICCAs are not yet identified or documented!

Many ICCAs threatened by forces of 'development', commercialisation, cultural change

No / weak / inappropriate recognition

Conservation legislation slow to adapt to ICCAs

Using a variety of PA categories and governance types can help to:

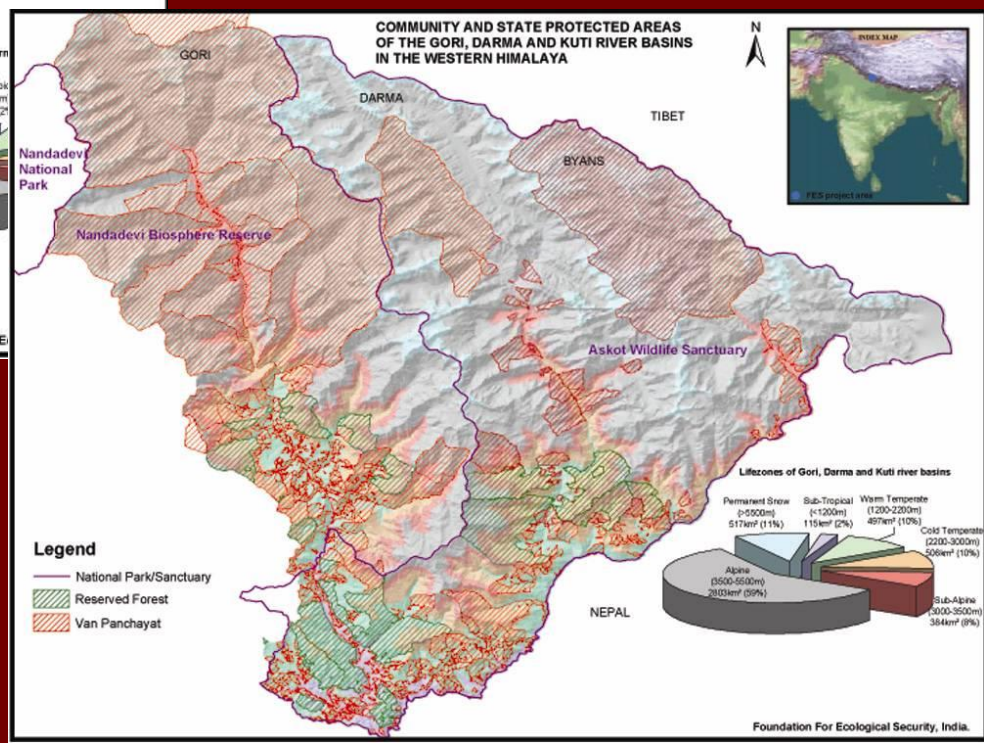

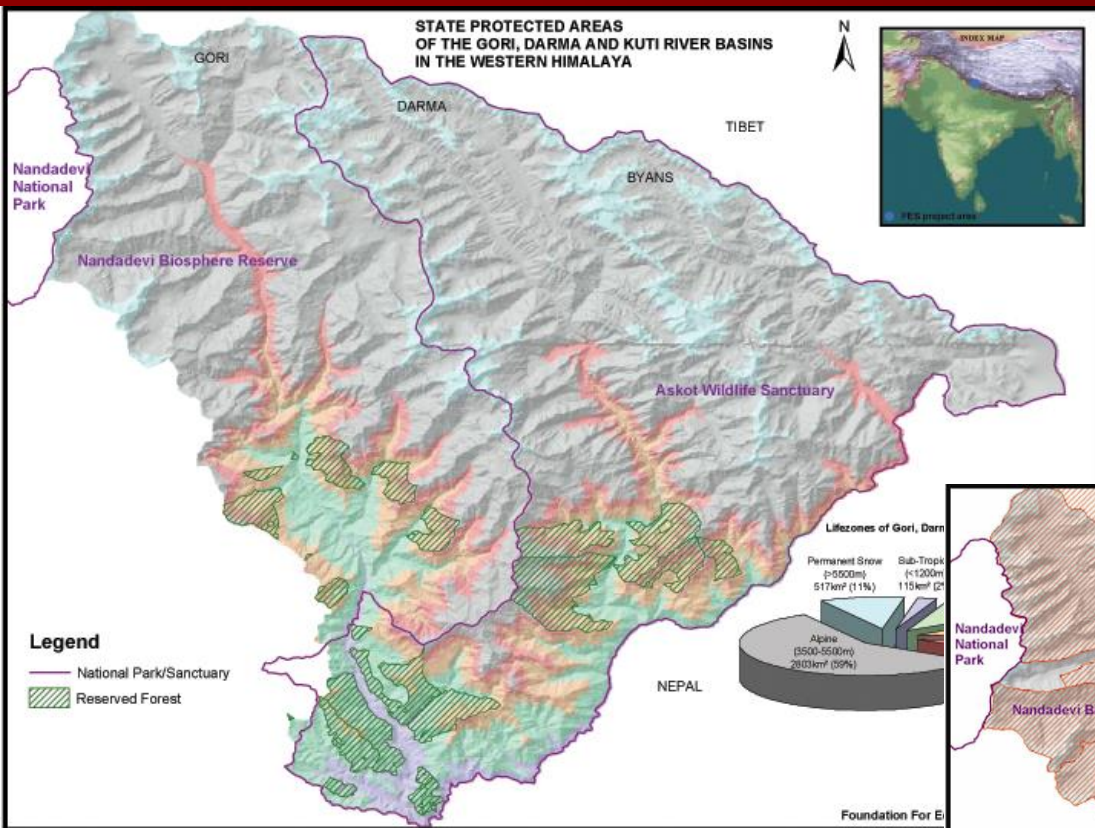

- expand the coverage of protected areas
- address gaps in the system: more coherent PA systems
- increase flexibility and responsiveness of the system (e.g. to climate change)
- enhance public support for conservation

meet Aichi Target 11: 'system of PAs and other effective area-based conservation measures' covering 17% terrestrial / 10% marine

Using a mosaic approach to achieve conservation across the landscape: various conservation and governance categories

Uttarakhand: Van Panchayats (community forest councils) are spread over several hundred sq.km *within & between* govt PAs ... and act as critical wildlife corridors

Qs: what would an effective governance institution for entire landscape?

Guidance on ICCAs

Secretariat of the
Convention on
Biological Diversity

CBD Technical Series No. 64

64

RECOGNISING AND SUPPORTING TERRITORIES AND AREAS CONSERVED BY INDIGENOUS PEOPLES AND LOCAL COMMUNITIES

Global overview and
national case studies

ICCAs & Aichi Targets

The Contribution of Indigenous Peoples' and Local Community Conserved Territories and Areas to the Strategic Plan for Biodiversity 2011-20 (Aichi Targets)

The Strategic Plan for Biodiversity 2011-20, framed by Parties to the CBD at the 10th Conference of Parties in 2010, outlines an ambitious roadmap towards halting and reversing biodiversity loss across the planet. While clearly not a replacement for the Convention, which is a mix of policy, goals, strategies, actions, and guidance, the Strategic Plan is crucial for its implementation. The 20 'Aichi Targets' it encompasses understandably go beyond ecological and biological aspects, essential as they are, to also focus on the social-cultural, economic, and political elements of achieving this roadmap.

While all sectors of society have a role to play in the implementation of the Strategic Plan, indigenous peoples and local communities are central to it. This is not only because the lands and waters over which such peoples and communities have custodianship and/or customary

Policy Brief of the ICCA Consortium

issue no. 1

The ICCA
Consortium

Co-produced by the CBD Alliance, Kalpavriksh and CENESTA,
in collaboration with the IUCN Global Protected Areas Programme
Series Sponsors: The Christensen Fund and UNDP GEF SGP

New kid on the block: Other Effective Area-Based Conservation Measures (OECMs)

Areas that are effectively conserved but not part of the official protected area system

OECMs are “**clearly defined geographical space where de facto conservation of nature and associated ecosystem services and cultural values is achieved and expected to be maintained in the long-term regardless of specific recognition and dedication**” (Borrini-Feyerabend & Hill 2015)

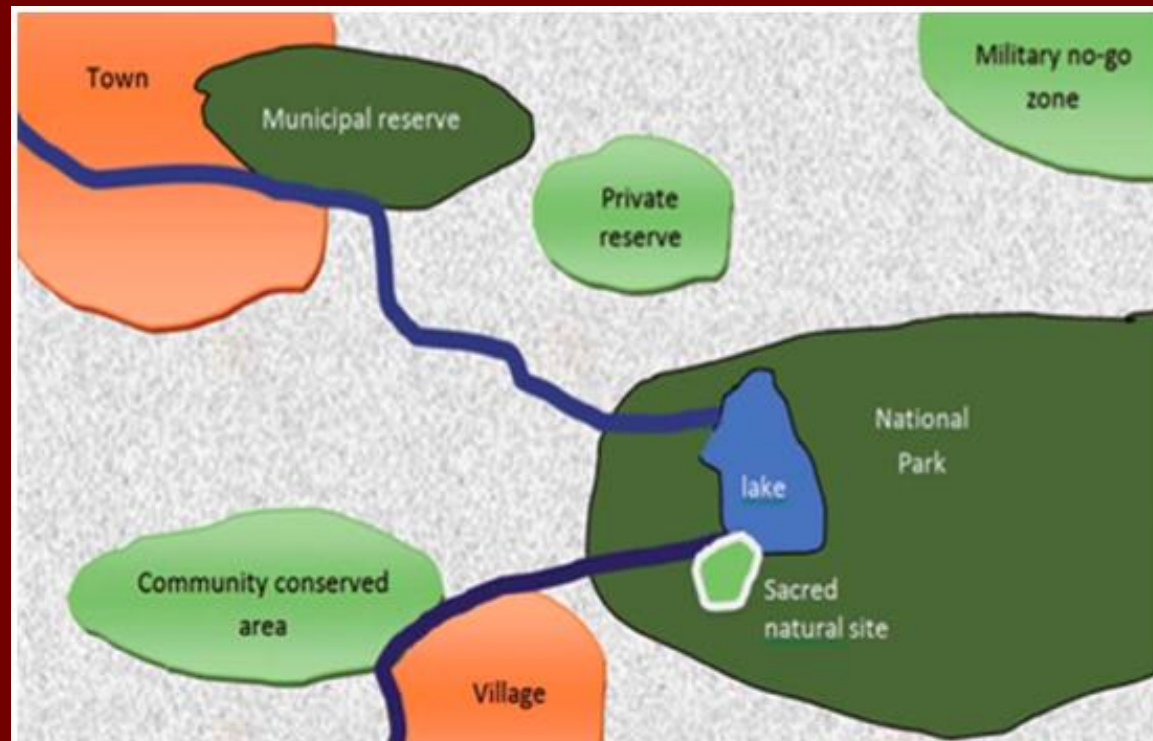

Need to clarify:

‘Effective’?

‘Area-based’?

‘Conservation’?

‘Measures’?

Back to CBD Protected Area Programme of Work...

A sample of committed activities

By 2006...

- National reviews to include innovative **governance types**: indigenous/community conserved areas (ICCAs), private protected areas (PPAs), co-managed protected areas (CMPAs)
- Studies on integration of PAs into sectoral plans, e.g. **poverty reduction** strategies
- Develop methods, standards, criteria, **indicators** re. PA governance

A sample of committed activities

By 2008...

- Full participation, respecting rights & responsibilities, in all PAs (existing and new)

- Policies & measures to eliminate illegal trade, taking into account sustainable customary uses (article 10c)

Why the mammoth became extinct.

A sample of committed activities

By 2008...

- Mechanisms for **equitable** sharing of **costs** and **benefits** (incl. assessments)
- Promotion & legal recognition of full set of **governance types** (incl. ICCAs, PPAs, CMPAs)
- Consider governance principles: **decentralisation**, **participation**, **accountability**...

A sample of committed activities

By 2008...

- Resettlement only with prior informed consent
- Public awareness re. needs, priorities, values of indigenous/local communities and of their knowledge
- Mechanisms for dialogue & information exchange between officials and indigenous/local communities

A sample of committed activities

By 2010/2012...

- Establishment of PAs benefiting indigenous/local communities, incl. respect and maintenance of **traditional knowledge** (article 8j)

- All PAs to have effective management, using highly **participatory planning processes**

COP10 stressed action by parties to:

- Provide greater attention to Element 2 of PoWPA
- Diversify / strengthen PA governance types
- Recognise co-managed PAs, ICCAs, private PAs
- Incorporate good governance principles

Implementation of Governance aspects of PoWPA

- National implementation of Element 2, generally poor
 - Many countries not yet recognised new governance types of PAs, e.g. ICCAs
 - Most countries not fully integrated rights, equitable sharing of costs and benefits, and democratic decision-making
 - Multi-stakeholder committees not yet set up, or are without adequate community representation

Implementation of Governance aspects of PoWPA

- Some progressive policy and practice, e.g.
 - Iran: recognition of pastoral peoples' ICCAs
 - Nepal: hand-over of one PA to communities
 - India: recognition of forest rights (including in PAs)
 - Philippines: recognition of ancestral domain ICCAs, integrating ICCAs in PA system
 - Australia, Columbia, Canada: recognition of indigenous territories, co-management & ICCAs
 - South Africa: restitution of territories in PAs
 - Madagascar: tripling PA coverage, using various governance types including ICCAs

Inappropriate implementation

- Top-down 'participatory' policies sometimes counter-productive, e.g. replacing diverse local self-governance structures with uniform 'co-management' institution under some control of government (*e.g. India's Community Reserves*)

Governance assessment, evaluation and action

1. Steps in the process
2. Possible results of a system assessment
3. Possible results of a site assessment

Assessing and evaluating PA governance

Assessment

- History and culture
- Actors and institutions
- Spatial analyses
- Governance process & quality

Evaluation

- How does the situation compare to our objectives?
- What options exist to improve the situation?

Improving action

- What do we want to do about it?

System level

Site level

Consortium

A few questions for us

- Does my country have examples of various **governance types** of PAs?
- Are all these types recognised in **law and policy**?
- Are all these types incorporated into the **PA network**?
- Are **Indigenous & Community Conserved Areas (CCAs)** adequately identified and supported?
- Are principles of **good governance** built into the PA laws/policies & practices?
- Are **OECMs** identified and recognised?

Group exercises

1. PA governance continuum
2. PA governance / management matrix

Key questions

1. Are there sites that qualify as protected areas, governed by agencies/individuals other than government?
2. Are such sites integrated by the government *within* the official protected area system?
3. Are such sites recognized by the government, *outside* of the official protected area system, e.g. as OECMs?
4. Are current laws / policies adequate for such recognition? If not, what kind of changes are needed?
5. What main next steps would you propose, and commit to?

Report back and discussions

- Overview of each country: current status of governance diversity
- Key recommendations towards more diverse PA system to achieve Aichi 11 & 12
- Main hurdles and opportunities
- Key follow up steps (country-wise & collectively)
