

## PRESS RELEASE

### Seychelles fourth country to ratify the Nagoya Protocol on genetic resources

Montreal, 27 April 2012 – Seychelles, on 20 April 2012, became the fourth country to ratify the Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization to the Convention on Biological Diversity.

The Nagoya Protocol will enter into force 90 days after the deposit of the 50<sup>th</sup> instrument of ratification. In addition to Seychelles, Rwanda, Gabon and Jordan have also ratified the Protocol.

The Nagoya Protocol was open for signature between 2 February 2011 and 1 February 2012. There are 92 signatories to the Protocol.

Dr. Rolph Payet, Minister of Environment and Energy, Seychelles, said: “Protecting and conserving biodiversity is at the centre of our sustainable development agenda. Seychelles, a small island state with limited natural resources and a small economic base, has demonstrated that sustainability can be achieved through political commitment and the implementation of a vision that engages the present generation in managing its environment for the future.

“In 2010, the President of the Seychelles declared that over 50% of our terrestrial area is now protected area. This monumental achievement reflects the commitment of the people of Seychelles to safe guarding its natural heritage. For us the Nagoya Protocol is an important instrument for ensuring that the benefits we gain today from our biodiversity will be shared equitably by all involved especially the custodians of these natural treasures while ensuring the enjoyment of similar benefits by the generations of tomorrow” he said.

Braulio Ferreira de Souza Dias, Executive Secretary of the Convention on Biological Diversity, said: “The Nagoya Protocol will create incentives to conserve and sustainably use genetic resources, and thus enhance the contribution of biodiversity to development and human well-being. I urge other Parties to the Convention to take the steps to ratify as soon as possible.”

In order to become Parties to the Nagoya Protocol, Parties to the Convention that have signed the Nagoya Protocol may then proceed to take steps at the domestic level that would lead to depositing their instruments of ratification, acceptance or approval with the Depositary. Parties to the Convention that were not be able to sign the Nagoya Protocol by 1 February 2012, but still wish to become Parties, may accede to the Protocol by depositing an instrument of accession with the Depositary. Ratification, acceptance, approval and accession have the same legal effect. Further information on how to become a Party to the Protocol can be found at: [www.cbd.int/abs/becoming-party/](http://www.cbd.int/abs/becoming-party/).

The entry into force of the Nagoya Protocol will provide greater legal certainty and transparency for both providers and users of genetic resources, creating a framework that promotes the use of genetic resources and associated traditional knowledge while strengthening the opportunities for fair and equitable sharing of benefits from their use. Hence, the Protocol will create new incentives to conserve biodiversity,

sustainably use its components, and further enhance the contribution of biodiversity to sustainable development and human well-being.

### ***Notes to Editors***

Heads of State and Government at the World Summit on Sustainable Development, held in Johannesburg in September 2002 first recognized the need for an international regime to promote and safeguard the fair and equitable sharing of benefits and called for negotiations to be carried out within the framework of the Convention on Biological Diversity. The Conference of the Parties to the Convention responded at its seventh meeting, in 2004, by mandating its Ad Hoc Open-ended Working Group on Access and Benefit-sharing to elaborate and negotiate an international regime on access to genetic resources and benefit-sharing to effectively implement Articles 15 (Access to genetic resources) and 8(j) (Traditional knowledge) of the Convention and its three objectives.

The Nagoya Protocol significantly advances the objective of the Convention on the fair and equitable sharing of benefits arising from the utilization of genetic resources by providing greater legal certainty and transparency for both providers and users of genetic resources. Specific obligations to support compliance with domestic legislation or regulatory requirements of the Party providing genetic resources and contractual obligations reflected in mutually agreed terms are a significant innovation of the Nagoya Protocol. These compliance provisions as well as provisions establishing more predictable conditions for access to genetic resources will contribute to ensuring the sharing of benefits when genetic resources leave a Party providing genetic resources. Also, the Protocol's provisions on access to traditional knowledge held by indigenous and local communities when it is associated with genetic resources will strengthen the ability of these communities to benefit from the use of their knowledge, innovations and practices.

By promoting the use of genetic resources and associated traditional knowledge, and by strengthening the opportunities for fair and equitable sharing of benefits from their use, the Protocol will create incentives to conserve biodiversity, sustainably use its components, and further enhance the contribution of biodiversity to sustainable development and human well-being.

The list of signatories of the Nagoya Protocol is available on the Convention's website at: [www.cbd.int/abs/nagoya-protocol/signatories/](http://www.cbd.int/abs/nagoya-protocol/signatories/)

### **The Convention on Biological Diversity (CBD)**

Opened for signature at the Earth Summit in Rio de Janeiro in 1992, and entering into force in December 1993, the Convention on Biological Diversity is an international treaty for the conservation of biodiversity, the sustainable use of the components of biodiversity and the equitable sharing of the benefits derived from the use of genetic resources. With 193 Parties, the Convention has near universal participation among countries. The Convention seeks to address all threats to biodiversity and ecosystem services, including threats from climate change, through scientific assessments, the development of tools, incentives and processes, the transfer of technologies and good practices and the full and active involvement of relevant stakeholders including indigenous and local communities, youth, NGOs, women and the business community. The Cartagena Protocol on Biosafety is a subsidiary agreement to the Convention. It seeks to protect biological diversity from the potential risks posed by living modified organisms resulting from modern biotechnology. To date, 161 countries plus the European Union have ratified the Cartagena Protocol. The Secretariat of the Convention and its Cartagena Protocol is located in Montreal.
