

PRESS RELEASE

Three new ratifications edge landmark treaty on genetic resources towards entry into force

Montreal, 31 January 2014 – Three new ratifications to the Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization provide significant momentum towards its entry into force. The recent ratifications by Benin, Burkina Faso and Myanmar bring the total number of ratifications to the ground-breaking treaty under the Convention on Biological Diversity (CBD) to 29. This means that only 21 more ratifications are needed for the Protocol to enter into force.

Benin and Burkina Faso become the twelfth and thirteenth African countries, respectively, and Myanmar the eleventh Asian country, to ratify the Nagoya Protocol. Their support underlines the importance of this instrument in the service of sustainable development.

“These recent ratifications by Benin, Burkina Faso and Myanmar establish the necessary momentum towards entry into force of the Nagoya Protocol in time for the twelfth meeting of the Conference of the Parties to the Convention, to be hosted by the Republic of Korea in October 2014,” said Braulio Ferreira de Souza Dias, CBD Executive Secretary. “I encourage all countries that have not done so to ratify the Protocol at their earliest convenience, as the early entry into force of the Protocol will also mean achieving Aichi Target 16.”

There will be an exchange of views on the state of implementation of the Nagoya Protocol at the third meeting of the Intergovernmental Committee for the Nagoya Protocol (ICNP 3), to be held 24-28 February 2014 in Pyeongchang, Republic of Korea.

The Nagoya Protocol will enter into force on the 90th day after the date of deposit of the 50th instrument of ratification, acceptance, approval or accession.

Benin, Burkina Faso and Myanmar join Albania, Bhutan, Botswana, Comoros, Côte D’Ivoire, Egypt, Ethiopia, Fiji, Gabon, Guinea Bissau, Honduras, India, Indonesia, Jordan, Lao People’s Democratic Republic, Mauritius, Mexico, the Federated States of Micronesia, Mongolia, Norway, Panama, Rwanda, the Seychelles, South Africa, the Syrian Arab Republic and Tajikistan are the countries that have ratified or acceded to the landmark treaty so far.

United Nations Secretary-General Ban Ki-moon, as part of his message for the 2013 International Day for Biological Diversity called “on all Parties to the Convention on Biological Diversity who have not already done so, to ratify the Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization, and therefore help us all to work toward the future we want.” The Secretary-General wrote to all Heads of State/Government highlighting the valuable contribution that the Protocol can make to sustainable development and urging ratification at the earliest opportunity so that the international community can move to the implementation phase.

The significance of the Nagoya Protocol was also highlighted during a special joint briefing event to the Second Committee of the United Nations General Assembly on 30 October 2013. In addition, in December 2013 the General Assembly, in resolution A/RES/68/214, invited parties to the Convention to ratify or accede to the Nagoya Protocol so as to ensure its early entry into force and its implementation. In a joint letter addressed to CBD Parties in January 2014, M. Veerappa Moily, Minister of Environment and Forests, India, and COP 11 President, and CBD Executive Secretary Bráulio Ferreira de Souza Dias expressed the hope that countries could finalize their internal processes towards the ratification or accession of the Nagoya Protocol as soon as possible but no later than 7 July 2014.

Information on how to become a Party to the Protocol is available at: www.cbd.int/abs/becoming-party/

Notes to Editors

The Nagoya Protocol, adopted at the tenth meeting of the Conference of the Parties in 2010, in Nagoya, Japan, significantly advances the objective of the Convention on the fair and equitable sharing of benefits arising from the utilization of genetic resources by providing greater legal certainty and transparency for both providers and users of genetic resources. By promoting the use of genetic resources and associated traditional knowledge, and by strengthening the opportunities for fair and equitable sharing of benefits from their use, the Protocol will create incentives to conserve biodiversity, sustainably use its components, and further enhance the contribution of biodiversity to sustainable development and human well-being.

List of signatories to the Nagoya Protocol is available at: www.cbd.int/abs/nagoya-protocol/signatories/

The Convention on Biological Diversity (CBD)

Opened for signature at the Earth Summit in Rio de Janeiro in 1992, and entering into force in December 1993, the Convention on Biological Diversity is an international treaty for the conservation of biodiversity, the sustainable use of the components of biodiversity and the equitable sharing of the benefits derived from the use of genetic resources. With 193 Parties, the Convention has near universal participation among countries. The Convention seeks to address all threats to biodiversity and ecosystem services, including threats from climate change, through scientific assessments, the development of tools, incentives and processes, the transfer of technologies and good practices and the full and active involvement of relevant stakeholders including indigenous and local communities, youth, NGOs, women and the business community. The Cartagena Protocol on Biosafety is a subsidiary agreement to the Convention. It seeks to protect biological diversity from the potential risks posed by living modified organisms resulting from modern biotechnology. To date, 166 countries plus the European Union have ratified the Cartagena Protocol. The Secretariat of the Convention and its Cartagena Protocol is located in Montreal.
