Life in harmony, into the future  
いのちの共生を、未来へ  
COP 10 / MOP 5

Ladies and Gentlemen,

Sadly, far too many people across the world remain apathetic to the ongoing loss of life on Earth. This is because the majority of the public and policymakers remain ignorant about the irreplaceable contributions that biodiversity makes to human wellbeing. As a result, biodiversity loss has not yet fully penetrated our collective consciousness.

Following the historic success of the Nagoya Biodiversity Summit last October, the UN General Assembly therefore declared 2011-2020 the UN Decade on Biodiversity. The Decade is not only a vehicle to support the implementation of the 2011-2020 Strategic Plan for Biodiversity and the achievement of the Aichi Biodiversity Targets. At the brink of ecological disaster, it is a worldwide celebration of everything we stand to lose by doing nothing and everything we stand to gain by changing our ways.

Over the course of the Decade, biodiversity must be mainstreamed throughout government and all sectors of society through communication, education and awareness-raising, appropriate incentive measures, and institutional change. By 2020, citizens and governments without exception should be firmly committed to the preservation of our biological heritage.

With this in mind, I would like to thank Turkey for organizing and hosting this workshop. The country is a fitting venue, given the country's unique biodiversity. Indeed Turkey enjoys several distinct biogeographic regions, each with its own endemic species and natural ecosystems. Moreover, Turkish wetlands are of crucial importance for many breeding species of birds.

Allow me also to specifically thank two eminent personages for attending this event: Mr. Mustafa Eldemir, the Turkey Deputy Undersecretary of the Ministry of Forestry and Water Works, and Mr. Kenji Ashida, the Deputy Consul-General from the Consulate General of Japan in Istanbul.

Your presence confirms that this workshop is seen as a crucial first step in implementing the Nagoya vision by securing the long-term viability of the biological resources in Central Asia. Many countries in this region have already gained substantial experience in developing and implementing National Biodiversity Strategies and Action Plans. We now need to draw on this communal expertise, for time is of the essence.

To provide effective guidance on national implementation, new NBSAPs must be formulated as soon as possible. Any delay in accomplishing this task will augur poorly for the achievement of the Aichi Targets. In addition to revising NBSAPs, the signing and ratification of the Nagoya Protocol is an urgent topic. To ensure that the first meeting of the governing body of the Protocol will take place in India in October 2012 back-to-back with COP-11, 50 ratifications are required before 19 July 2012. Moreover, to reach consensus on funding targets at COP-11, progress must be made on such foundational issues as what constitutes biodiversity-related funding and the levels needed, particularly in relation to the Aichi Targets and the implementation of NBSAPs.

The task the international community set itself in Nagoya was ambitious. It will require leadership and creative thinking from the Parties, national focal points, the GEF and the Secretariat to ensure the timely delivery of the 2011-2020 Strategic Plan at national and regional levels. But I have not doubt that the countries of the Central Asia can live up to the challenge of Nagoya. I urge you to remember what is at stake in this process: nothing less than the future of life on Earth.

Thank you for your kind attention.
