***Please provide summary information on the process by which this report has been prepared, including information on the types of stakeholders who have been actively involved in its preparation and on material which was used as a basis for the report***

This report was prepared in consultation with many stakeholders including government, non-government institutions and organizations particularly those that are involved in implementing activities in support of our obligations under the CBD. Governments at all levels were from National (federal), State and local governments. Non-governmental groups were primarily the environmental and women groups.

In addition to using reports from the State governments on recent activities, the FSM conducted national and State workshops during which recent activities were discussed and such information is included herein. These meetings and workshops were part of a process under the National Biodiversity Strategy and Action Plan Project funded by the Global Environment Facility and implemented by the UN Development Program. Participants to these workshops included a wide range of stakeholders from all the States of the FSM.

***Please provide information on any particular circumstances in your country that are relevant to understanding the answers to the questions in this report***

The FSM is comprised of the National government, four State governments and several local governments. The State governments are relatively autonomous in the implementation of projects and activities including those involving environmental or resource management. The National government provides coordination between States and also technical assistance to each State government as necessary. The autonomy of States results in difficulty of coordination coupled by the fact that the four States are separated by ocean with their capitals at least 400 miles from each other. The four States are comprised of about 600 islands, atolls and islets (totalling only about 270 sq. miles) scattered over more than a million square miles of FSM's exclusive economic zone with the highest island reaching 791 meters above sea levels and the low islets only barely above sea level. Coordination of national efforts, therefore, requires substantial time and resources to bring together the views of all four States.

As a developing country joining the international community (United Nations) only in 1991, the FSM does recognize the need to build national capacity to implement the CBD. Some of the major constraints to the implementation of related activities are emphasized here but is evident throughout this report. Besides limited financial resources, information on FSM biodiversity is also very limited with a lot of what is there being scattered outside of FSM and not easily accessible or available. Technical expertise on most issues under the CBD is lacking and the institutions or systems also require support to become more efficient and effective. The FSM however is progressing in its efforts to address issues relevant to biodiversity conservation. Some of the trends include emergence of environmental NGO's, more community involvement in environmental management, new partnerships between NGOs and government agencies, new activities with support from other CBD Parties, and more cooperation with neighbouring countries on common issues relevant to biodiversity. These are a few trends that are evident despite the constraints faced by the FSM.

***Further comments on implementation of this Article***

The FSM has designated several managed or protected areas. Traditional taboo setting aside areas for the purpose of conservation are still observed in some parts of the FSM. Given the limited land area, absolute restriction of areas is not very popular.

In partnership with The Nature Conservancy, the FSM is implementing a process to identify high biodiversity areas which can be considered for protection.

<p>Traditional knowledge and practices are still maintained and practiced in the islands. The knowledge is increasingly being eroded as western influence affects the younger generations. Such knowledge is maintained and passed down generations within families who are still very protective of their knowledge.</p> <p>Effective traditional innovations and practices are also being replaced by western methods with little or no integration. The FSM NBSAP recognizes the need to integrate traditional and western methods to ensure effective conservation.</p>
