Nature Conservation Act gives general regulation measures, additional provisions need to be prepared to further determine management of biological resources.

76.:

General measures are defined by the Environmental Protection Act and Nature Conservation Act. Additionally, general protection measures are defined for different species and habitat types and ecologically important areas not necessarily forming parts of protected areas. According to the Nature Conservation Act, buffer zones can be delineated adjacent to protected areas.

77.:

Nature conservation Act is a legal framework, an example of practical implementation is conducted in restoration(renaturation) of Škocjanski zatok (Škocjan Bay - a brackish coastal lagoon).

78.:

Measures are included in the Decree on conservation of threatened animal species, Ordinance on conservation of rare and threatened plant species.

79.

Regulation of GMOs is partial, provided by different acts. A comprehensive Act on use of genetic technology is in parliamentary procedure.

d):Nature conservation Act is providing the legal basis.

Forest Action Programme is adopted and implemented on the basis of Forest Act.

81.:

Nature Conservation Act has been adopted, further provisions are in preparation (by-laws).

**Further comments on implementation of this Article**

In principal, education, awareness and communication are perceived as effective tools generally considered strong in Slovenia, but practical implementation and use is rather weak. The main reasons for such a situation are:

- There is a general perception that education and sustainable development are two separate issues;
- in the past, environmental education, training etc. were not included into curricula; how much people are currently aware of biodiversity is a result of ad-hoc activities;
- prevailing models used in economic development or in education still do not give much opportunities to include the principles of sustainable development.

Additionally, according to present situation in education and awareness the following two points have to be stressed:

- there is a significant lack of trained staff to bridge this gap in coming years;
- currently, capacity building mainly dependants on foreign financial support and trainers.

In general, demand-supply situation is still rather weak, meaning that, on the one hand, there is not enough opportunities offered to provide efficient training and education, but on the other hand, there is also hardly any demand for it from stakeholders or interested groups.

New legislation has been drafted and implemented in different fields in the Republic of Slovenia. It includes regulations in public sector, management of dangerous substances or other issues. This legislation also considers different training programmes which should directly or indirectly include implementation of the CBD principles.

182.

Most of the public media is ignorant when it comes to understanding of the importance of biodiversity. Its reporting is often sensationalistic. Nevertheless, information on biodiversity is available in published specialised articles or provided in media specialising in biodiversity issues.

183. 187.,188: Formal education:

Within recent changes in formal education the number of lessons in biology (ecology) has been drastically reduced and inappropriately integrated into other lessons, or even excluded from the curricula. In such a way, any possibility to improve the knowledge and understanding of biodiversity and sustainable development through formal education has been reduced to the minimum.

In secondary schools biodiversity issues are integrated into ecology.

The new programmes for nine-year elementary schools integrate biodiversity in biology.

Training of school teachers in biological diversity is not obligatory and few of them are participating.

Further comments on relative priority and on availability of resources							
<p>With high priority and limited resources the results obtained are still limited. Activities are conducted together with those in the framework of implementing the Aarhus convention and in co-operation with the European Environment Agency. More consistent overview of the existing situation is needed. A catalogue of data sources for nature is planned to be prepared this year. It will accelerate the implementation of this article.</p> <p>One of the problems that the country has to face is dispersion of data basis related to biodiversity in different institutions and sectors. Data are organized in different ways which limits access to the information and links to a more holistic data basis needed for better efficiency in biodiversity decision-making. Exchange of data among institutions is rather weak and often impossible without financial demands. According to development and new information technologies improvement of the situation and need of co-operation are expected.</p>
