Foreword

Dear Reader,

Statistics are increasingly important for the definition, implementation, monitoring and evaluation of environmental policies, in particular the sixth environment action programme, its implementing seven 'thematic strategies', the environmental dimension of the EU sustainable development strategy, and the Europe 2020 strategy for smart, sustainable and inclusive growth, adopted by the European Council in June 2010. Reliable statistics are also needed to facilitate policy coordination among Member States and to reinforce a commitment towards sustainable development and environmental goals.

The recognition of the importance of sustainable development has led to introducing environmental aspects in the formulation of policies at the national and international level. To encourage all the concerned actors to protect the environment, governments can use regulatory measures, can levy taxes directly linked to pollution or provide other economic incentives to production using less polluting techniques and to switch consumption to more 'environmentally friendly' products. The 'polluter pays' principle, which requires that the costs of pollution be borne by those who cause it, is a pillar of environmental policies.

Statistics on environmental protection expenditure and revenues refer to the money spent on all the activities and actions aiming at the prevention, reduction and elimination of pollution as well as any other degradation of the environment, resulting from the production processes or the consumption of goods and services.

This publication presents data on environmental protection expenditure and revenues of the European Union Member States, candidate countries and EFTA countries for the period 1995–2009.

The publication is structured into two main parts. The methodological information provides inputs on the concepts, data collection methodology as well as data availability while the country fact sheets give a snapshot of the main features of environmental protection expenditure and revenues in the European countries.

Eurostat would like to thank all national statistical services which have provided the data which made this publication possible.

Anton Steurer and Annamaria Szirony were responsible for managing this project at Eurostat level. Together with Maria-Jose Lopez, Céline Martin and Marco Orsini (ICEDD, Belgium) they contributed significantly to its success.

Introduction

Environmental protection expenditure: what for?

All human activities inevitably affect the environment to some degree. This means that all sectors of the economy have their specific role to play in the overall efforts to minimise the negative consequences of their activities on the environment. Governments at all levels, companies involved in industrial or other business activities, enterprises providing environmental services (such as collection and treatment of waste, or environmental consultancy), and households as consumers are all involved in curbing pollution and preserving a healthy environment.

The recognition of the importance of sustainable development has led to introducing environmental aspects in the formulation of policies at the national and international level. To encourage all the concerned actors to protect the environment, governments can use regulatory measures, can levy taxes directly linked to pollution or provide other economic incentives to production using less polluting techniques and to switch consumption to more 'environmentally friendly' products. The 'polluter pays' principle, which requires that the costs of pollution be borne by those who cause it, is a pillar of environmental policies. Measures to protect the environment are also increasingly being taken on a voluntary basis – to meet the expectations of consumers or stakeholders, to increase market shares, or to improve the corporate image, for example.

How much does a nation spend on environmental protection and what form does this expenditure take? Who is financing this expenditure? What are the effects of this expenditure? Which economic activities are induced by environmental protection? These are only a few questions which can be answered by using environmental protection expenditure data.

Used jointly with physical data, information on environmental protection can help to follow up and monitor the efficiency of environmental policy, the application of the 'polluter pays' principle and the costs of compliance with environmental regulations, and to provide a basis for cost/benefit analyses for new environmental policy proposals.

More specifically the information conveyed by environmental protection expenditure can be used for a variety of purposes:

- to analyse the economic impact of environmental policy – for example, the possible effects on the competitiveness of businesses;
- to analyse the need for environmental financing and to follow up and monitor specific support and investment programmes;
- in environmental performance reviews, to show, for example, what action countries have taken to reduce the pressure on the environment, to serve as an indicator of the response from society for reducing environmental pressure in general, and as a sustainable development indicator;
- as an internal tool to help businesses identify and minimise their costs and report to external stakeholders on action taken, and as input for financial analysts in their business evaluations;
- as a basis for descriptions of the market for environmental goods and services.

At the same time, spurring environmental protection is also an opportunity for the creation of new markets for goods and services to prevent or treat environmental damages stimulating the development of a greener economy.

Thus through the analysis of environmental protection expenditure data, the impact of environmental protection on the European economy can be characterised from two standpoints:

- the actual burden on economic activities and units resulting from environmental protection measures, seen from the viewpoint of international comparisons and competitiveness,
- economic activities induced by environmental protection.

Structure of the publication

This publication presents data on environmental protection expenditure and revenues of the European Union Member States, candidate countries and EFTA countries for the period 1995–2009. The period can vary according to data availability for each country.

The publication is structured into two main parts.

The first part (Methodological information) gives some information on the concepts, data collection methodology as well as data availability.

This information intends to ensure a clear understanding of the data quality and the basic concepts that define the data presented in this publication. It describes the strengths and limitations of the data and how they can be effectively used and analysed. The information may also be of particular importance when making comparisons with data from other statistical sources, and when drawing conclusions regarding changes over time.

The second part (Country fact sheets) gives a snapshot of the main features of environmental protection expenditure and revenues in European countries.

Methodological information

Environmental protection expenditure: a definition

Environmental protection expenditure is the money spent on all the activities and actions that are aimed at the prevention, reduction and elimination of pollution as well as any other degradation of the environment, resulting from the production processes or the consumption of goods and services.

In order to be included under environmental protection, activities and actions (and related transactions) or parts thereof must satisfy the end purpose criterion (*causa finalis*), i.e. that environmental protection is their primary purpose.

Activities such as energy and material saving are only included to the extent that they mainly aim at environmental protection. An important example is recycling which is included only to the extent that it constitutes a substitute for waste management.

Excluded are activities that, while beneficial to the environment, primarily satisfy technical needs or health and safety requirements. Excluded are also expenditure linked to mobilisation of natural resources (e.g., water supply).

A complete picture of economic aspects of the preservation of the environment should add to environmental protection expenditure also data on the money spent on all activities and measures aimed at managing in a sustainable way natural resources in order to prevent or reduce depletion phenomena, as for example the reduction of withdrawals of water, fossil fuels, wood, the energy and material saving, etc.

Environmental protection expenditure: the methodological framework

Eurostat regularly collects environmental protection expenditure data through the Joint Eurostat/OECD Questionnaire on Environmental Protection Expenditure and Revenues (JQ), a statistical questionnaire directly relying on “observable” data and flows.

The classification of economic units

The JQ classifies units of the economy into four main sectors: specialised producers (i.e. public and private enterprises), public sector (other than specialised producers), business and households. This grouping of economic units is based on a number of distinctions made between the types of environmental protection activity they are involved in¹.

Units classified as specialised producers or under public sector are units that carry out environmental protection activities *for third parties*.

The public sector comprises those units which carry out 'non-market' activities for the 'community as a whole'. Apart from legislative and regulatory tasks, government units provide environmental public goods. They also subsidise environmental protection activities directly and indirectly, for example by providing investment grants.

Specialised producers produce market environmental protection services. This group also includes those market producers that carry out environmental protection activities as a secondary activity. Specialised producers can be divided between public specialised producers and private specialised producers.

Units that carry out environmental protection activities *for their own internal use*, are part of business sector and cover internal (ancillary) activities, i.e. activities carried out on own behalf to reduce the environmental impact of their production processes. For example, businesses can invest in equipment for cleaning up pollutants (e.g.

¹ This classification is consistent with the guidelines for satellite accounting described in the chapter XXIX of the System of National Accounts (SNA, 2008).

filters) or in cleaner production technologies reducing emissions, they can organise internally their own waste management service, etc.

The business sector includes all activities in the classification of economic activities NACE Rev. 1.1 01 to 99, excluding public sector (falling mainly in NACE Rev. 1.1 75 'Public administration') and the activities of specialised producers (falling mainly in NACE Rev. 1.1 37 and 90 'Recycling' and 'Sewage and refuse disposal').

Although NACE Rev. 2 is to be used, in general, for statistics referring to economic activities performed from 1 January 2008 onwards, this publication refers to NACE Rev. 1.1 as this version has been used until the last collection of data in 2010. However, to give as comprehensive picture as possible on the present situation of the environmental protection expenditure and revenues in Europe, the fact sheets also contain NACE Rev. 2 data for the most recent years where NACE Rev. 1.1 figures were not available.

The households sector groups together those units that belong to the institutional sector of households in the national accounts, considered in their capacity as final consumers. Households mainly buy environmental services (for example they pay for the collection and treatment of waste).

Expenditure concepts and variables

The JQ distinguishes two expenditure concepts: expenditure according to the abater principle (EXP I) and according to the financing principle (EXP II). The framework of the JQ is based on double entry bookkeeping, where each activity and expenditure item has an abater and a financing side. Excluded are calculated cost items such as depreciation (consumption of fixed capital) or the cost of capital as this questionnaire only records actual outlays.

For a given sector or economic unit, expenditure according to the abater principle (EXP I) comprises all expenditure by the sector on the environmental protection activities *it undertakes*. Any economic benefits directly linked with the environmental protection activities (such as the receipts from selling by-products) are deducted in order to calculate the net amount of money spent by the sector for their own activities. EXP I is then equal to the sum of investments and in-house current expenditure for EP activities minus any receipts from selling by-products of EP activities (see Table 1 below).

Table 1 Expenditure according to the abater principle (EXP I)

Variable	Description
Investments expenditure	Capital expenditure and land acquisition
+ In-house current expenditure	Intermediate consumption and compensation of employees for the EP activities
- Receipts from by-products	Economic benefits linked to the EP activity
= EXP I	Expenditure according to the abater principle

For a given sector or economic unit, expenditure according to the financing principle (EXP II) corresponds to what they contribute to overall environmental protection activities, *whatever the unit that executes them*. This means that the part of EXP I that was directly financed by others (through subsidies or fees received) should be deducted, while the part of EXP I in other sectors that this sector finances directly (through subsidies or fees paid) should be added.

Thus, expenditure according to the financing principle is equal to EXP I plus any environmental protection services purchased from another sector or unit, less revenues from sales of environmental protection services to others plus (minus) transfers paid (received) related to environmental protection (see Table 2).

Table 2 Expenditure according to the financing principle (EXP II)

Variable	Description
EXP I	
+ (-) Transfers paid (received)	Transfers related to EP activities, including earmarked taxes
+ Fees and payments for EP services	Environmental protection services purchased from another unit/sector
- Revenues from EP services	Sales of environmental protection services to other sectors/units
= EXP II	Expenditure according to the financing principle

An example: environmental expenditure of the business sector in France

Any enterprise spends some money for minimising the impact on the environment of its production processes. Waste management, the treatment of wastewater and effluents as well as the abatement of air pollutants are some of the environmental protection activities which are usually undertaken.

The business sector in France spent in 2008 for the environmental protection activities *it undertook* EUR 6 575 million. Roughly one third of this expenditure was investments, i.e. outlays for machinery, equipment and land used for environmental protection purposes. Two third were in-house current expenditure which includes the use of energy, material, maintenance and personnel for measures made by the sector to protect the environment. A large part of in-house expenditure is often related to operating environmental protection equipment. Nevertheless there are also other in-house expenditure related to environmental protection such as general administration, environmental management and certification, research and development.

Nevertheless, the efforts of the business sector to protect the environment did not reduce to just in-house activities. The sector bought also environmental services from specialised producers and the public sector. EUR 8 680 million is the total of purchases of environmental protection services of the business sector in France in 2008.

The business sector also received some subsidies for carrying out environmental protection activities from the public sector and paid some taxes directly used for financing environmental protection expenditure – so called earmarked taxes. The amount of subsidies received by the business sector minus the earmarked taxes paid was EUR 1 308 million.

When we add the purchases for environmental services and subtract subsidies (less earmarked taxes) to the expenditure directly borne for internal environmental protection activities, we have the money the business sector spent in France in 2008 for *financing* environmental protection, which amounted to EUR 13 497 million.

Table 3 Environmental expenditure of the business sector in France, 2008

Variable	Description	EUR million
Investments expenditure	Capital expenditure and land acquisition	2 407.3
+ In-house current expenditure	Intermediate consumption and compensation of employees for the EP activities	4 167.9
- Receipts from by-products	Economic benefits linked to the EP activity	-
= EXP I	Expenditure according to the abater principle	6 575.2
- Transfers received	Transfers related to EP activities received from the public sector, net of earmarked taxes	1 307.6
+ Fees and payments for EP services	Environmental protection services purchased from another unit/sector	8 679.6
- Revenues from EP services	Sales of environmental protection services to other sectors/units	not applicable*
= EXP II	Expenditure according to the financing principle	13 947.1

- : not available

* For the business sector only the production of ancillary activities for the protection of the environment is recorded. If an activity is selling part of these activities, this is not considered anymore an internal activity but a secondary production and thus the activity should be recorded under the specialised producers as a secondary specialised producer.

Source: Eurostat (online data code: [env_ac_exp1](#))

For the economy as a whole EXP I equals EXP II², only the distribution of expenditure between sectors changes when going from EXP I to EXP II (see the example of Hungary below and in table 4).

An example: EXP I and EXP II in Hungary

Hungary spent in 2008 EUR 1355 million in total for the protection of the environment. The most important financier of environmental protection expenditure is the business sector, as it accounts for slightly more than half of total expenditure, as it is signalled by EXP II. The first producer of environmental protection services is the specialised producers group, which accounts for 56% of the entire production of environmental protection activities, as it is indicated by EXP I.

Table 4: Environmental protection expenditure in Hungary, 2008 (EUR million)

	Investments	In-house current expenditure	Fees and payments for EP services	Receipts from by-products	Revenues	Subsidies and transfers	EXP I	EXP II
Public sector	139	43	47	0	-	92*	182	321
Businesses	257	231	351	70	-	41	418	728
Households	-	-	23*		-	-	-	23*
Specialised producers	147	629	81	20	502*	51	755	283
TOTAL	543	903	716	90	502*	182*	1 355	1 355

Source: Eurostat (online data code: [env_ac_exp1](#))

*estimation by Eurostat

² The equilibrium will not hold when e.g. transfers are received from or are given to the rest of the world or in the case of EP services imported/exported or because of different ways of reporting of VAT. The discrepancies due to these issues should be quite small.

Obtaining data on the variables needed for calculating EXP I and EXP II can be quite resource intensive for national statistical offices. For this reason many countries have not reported any data for some variables such as receipts from by products or revenues from EP services or have not been able to distinguish current expenditure into in-house current expenditure and fees and purchases.

Taking into account the limitations that occur due to data availability, Eurostat regularly publishes the indicator environmental protection expenditure (EPE) which comprises total investments and total current expenditure. Total current expenditure is the sum of internal current expenditure and fees and payments for EP services (see Table 5). For the public sector EPE includes also the subsidies and investment grants paid to other sectors related to EP activities.

This indicator gives a rough idea of the money spent by each sector for environmental protection activities directly and indirectly, i.e. not only by producing EP activities for own use, but also by buying environmental services from other economic units and financing EP expenditures carried out by other units ('rough' because it does not take into account receipts from by-products, revenues from EP services and transfers/subsidies received).

Table 5: Environmental protection expenditure (EPE)

Variable	Description
Investment expenditure	Purchases of capital expenditure and land acquisition
+ In-house current expenditure	Intermediate consumption and compensation of employees for the EP activities
+ Fees and payments for EP services	Environmental protection services purchased from another unit/sector
= EPE	For all the sectors but the public sector
+ Subsidies paid	Subsidies related to EP activities paid by the public sector
= EPE	Only for the public sector

As this publication will mostly use the EPE indicator, since data availability does not allow for the calculation of EXP I and EXP II for most of the countries, it is worthwhile to point out the limitations use of this indicator.

EPE is an approximate measure of EXP II for the business sector, as for this sector receipts from by-products, revenues of EP services and subsidies tend to be less relevant than the total amount of investments and current expenditure (see table 6 below).

EPE is a measure of production of EP services (so EXP I) for specialised producers as for these producers the fees and purchases of environmental services should not be very important (see table 6 below).

For the public sector EPE, which includes also subsidies, is an approximate measure of the financing of environmental protection (EXP II) as receipts and revenues are often small and fees almost not relevant (see table 6 below).

Table 6: EPE and EXP I and EXP II

Variable	Business sector	Specialised producers	Public sector
Investments expenditure	X	X	X
+ In-house current expenditure	X	X	X
- Receipts from by-products	x	x	x
= EXP I		≈ EPE	
+ (-) Transfers paid (received)	x	x	X
+ Fees and payments for EP services	X	x	x
- Revenues from EP services	nr	X	x
= EXP II	≈ EPE		≈ EPE

X: important

x: often small

nr: not relevant

While the EPE indicator can be used for comparison of a sector among countries, it cannot be used for comparing among sectors of the same economy and to sum up expenditures from the different sectors to build up a “national” expenditure figure for a given country.

When comparing EPE of specialised producers and business for example, one must take into account that some spending for producing environmental protection services will be counted twice: by the current expenditure and investments of specialised producers which are producing the service and by the payments of business sector which is buying these services. In order to have the total amount of money which is spent by the whole economy for environmental protection, one cannot add EPE by the four sectors used by the JQ to classify the economy. Instead, a full satellite account to the national accounts would be necessary.

The Environmental Protection Expenditure Account (EPEA)

The EPEA is a satellite account to the national accounts, based on the methodology set out in Chapter XXI of the System of National Accounts 1993 (SNA93). It is also consistent with the guidelines provided in chapter XXIX of the System of National Accounts 2008 (SNA 2008).

The EPEA was first presented in the European System for the Collection of Economic Information on the Environment (SERIEE), published in 1994 by Eurostat. The primary purpose of the 1994 SERIEE manual was to set up the conceptual framework for a monetary description of environmental-protection activities. This included the EPEA.

As a satellite account, the EPEA follows the principles of National Accounts (NA) with regards to the classification of units, valuation and categorisation of transactions. This allows to calculate an aggregate which can be compared with GDP as well as with other NA aggregates (final consumption, etc.).

After several revisions, the Joint OECD/Eurostat Questionnaire on Environmental Protection Expenditure and Revenues (JQ) is now based on an accounting structure rather close to that of the EPEA. The Joint questionnaire adopted the Classification of Environmental Protection Activities (see Table 7 thereafter) as the basic classification of environmental domains used in the reporting of environmental protection expenditure. As with the EPEA, the JQ's classification of institutional sectors follows rather closely the SNA classification, although some differences exist. Moreover the definition of environmental protection expenditure is the same in the JQ and the EPEA.

Nevertheless some differences between the two frameworks exist.

The JQ covers only 'actual' outlays excluding costs such as consumption of fixed capital. Such expenditures are included within the EPEA which then provides a more complete picture of the costs born by the economy for protecting the environment (on the use side) as well as of the size of the EP sector of the economy (on the supply side).

While in the JQ only intermediate consumption and compensation of employees are considered, in the EPEA all production costs are included through the recording of the value of output/uses. The difference mainly corresponds to the gross operating surplus (GOS), i.e. net operating surplus plus consumption of fixed capital, of producers of EP.

The inclusion of all the relevant items allows the calculation of gross and net aggregates of EP consistently and comparably with national accounts aggregates.

Some other discrepancies exist and relate to the treatment of VAT and subsidies on EP products, to the recording of secondary output, and to some transactions related to the rest of the world.

Classifying expenditure by environmental domains

The scope of environmental protection expenditure is defined according to the Classification of Environmental Protection Activities (CEPA), which distinguishes nine different environmental domains: 1. protection of ambient air and climate, 2. wastewater management, 3. waste management, 4. protection and remediation of soil, groundwater and surface water, 5. noise and vibration abatement, 6. protection of biodiversity and landscapes, 7. protection against radiation, 8. research and development and 9. other environmental protection activities. Further details on the activities included in each class are given in the table 7 below.

CEPA specifies that environmental protection expenditure should be classified in environmental domains according to the purpose of the activity, taking into account both the technical nature and the purpose of the activity in terms of policy concern. Activities and expenditure that affect more than one environmental domain (including administration) should be allocated to the different domains involved, through the use of estimates, if necessary. Expenditure should be classified in CEPA 9 'indivisible expenditure and activities' (or 'other') only as a last resort.

Table 7: Classification of Environmental Protection Activities (CEPA, 2000)

CEPA class	Description
1 - Protection of ambient air and climate	Protection of ambient air and climate comprises measures and activities aimed at the reduction of emissions into the ambient air or ambient concentrations of air pollutants as well as to measures and activities aimed at the control of emissions of greenhouse gases and gases that adversely affect the stratospheric ozone layer.
2 - Wastewater management	Wastewater management comprises activities and measures aimed at the prevention of pollution of surface water through the reduction of the release of wastewater into inland surface water and seawater. It includes the collection and treatment of wastewater including monitoring and regulation activities. Septic tanks are also included. Excluded are actions and activities aimed at the protection of groundwater from pollutant infiltration and the cleaning up of water bodies after pollution (see CEPA 4). Wastewater is defined as water that is of no further immediate value for the purpose for which it was used or in the pursuit of which it was produced because of quality, quantity, or time of its occurrence.
3 - Waste management	Waste management refers to activities and measures aimed at the prevention of the generation of waste and the reduction of its harmful effect on the environment. Includes the collection and treatment of waste, including monitoring and regulation activities. It also includes recycling and composting, the collection and treatment of low level radioactive waste, street cleaning and the collection of public litter. Waste are materials that are not prime products (that is, products made for the market) for which the generator has no further use for own purposes of production, transformation, or consumption, and which he wants to dispose of. Wastes may be generated during the extraction of raw materials, during the processing of raw materials to intermediate and final products, during the consumption of final products, and during any other human activity. Residuals recycled or reused at the place of generation are excluded. Also excluded are waste materials that are directly discharged into ambient water or air. Hazardous waste is waste that due to its toxic, infectious, radioactive, flammable or other character defined by the legislator poses a substantial actual or potential hazard to human health or living organisms. For the purposes of this definition, "hazardous waste" comprises for each country all those materials and products which are considered to be hazardous in accordance with that country's practices. Low level radioactive waste is included, whereas other radioactive waste is excluded (see CEPA 7). Low level radioactive waste is waste that, because of its low radionuclide content, does not require shielding during normal handling and transportation.
4 - Protection and remediation of soil, groundwater and surface water refers	Protection and remediation of soil, groundwater and surface water refers to measures and activities aimed at the prevention of pollutant infiltration, cleaning up of soils and water bodies and the protection of soil from erosion and other physical degradation as well as from salinisation. Monitoring, control of soil and groundwater pollution is included. Excluded are wastewater management activities (see CEPA 2), as well as activities aimed at the protection of biodiversity and landscape (see CEPA 6).
5 - Noise and vibration abatement	Noise and vibration abatement refers to measures and activities aimed at the control, reduction and abatement of industrial and transport noise and vibration. Activities for the abatement of neighbourhood noise (soundproofing of dancing halls, etc.) as well as activities for the abatement of noise in places frequented by the public (swimming pools, etc.), in schools, etc., are included. Excluded is the abatement of noise and vibration for purposes of protection at the workplace.
6 - Protection of biodiversity and landscape	Protection of biodiversity and landscape refers to measures and activities aimed at the protection and rehabilitation of fauna and flora species, ecosystems and habitats as well as the protection and rehabilitation of natural and semi-natural landscapes. The separation between 'biodiversity' and 'landscape' protection may not always be practical. For example, maintaining or establishing certain landscape types, biotopes, eco-zones and related issues (hedgerows, lines of trees to re-establish 'natural corridors') have a clear link to biodiversity preservation. Excluded is the protection and rehabilitation of historic monuments or predominantly built-up landscapes, the control of weed for agricultural purposes as well as the protection of forests against forest fire when this predominantly responds to economic reasons. The establishment and maintenance of green spaces along roads and recreational structures (e.g. golf courses, other sports facilities) are also excluded. Actions and expenditure related to urban parks and gardens would not normally be included but may be related in some cases to biodiversity – in such cases the activities and expenditure should be included.
7 - Protection against radiation	Protection against radiation refers to activities and measures aimed at the reduction or elimination of the negative consequences of radiation emitted from any source. Included is the handling, transportation and treatment of high level radioactive waste, i.e. waste that, because of its high radionuclide content, requires shielding during normal handling and transportation. Excluded are activities and measures related to the prevention of technological hazards (e.g. external safety of nuclear power plants), as well as protection measures taken at workplaces. Also excluded are activities related to collection and treatment of low-level radioactive waste (see CEPA 3).
8 - Research and development	Research and development (R&D) comprises creative work undertaken on a systematic basis in order to increase the stock of knowledge and the use of this knowledge to devise new applications (see Frascati manual, OECD 1994) in the field of environmental protection. The class regroups all R&D activities and expenditure oriented towards environmental protection: identification and analysis of sources of pollution, mechanisms of dispersion of pollutants in the environment as well as their effects on human beings, the species and the biosphere. This heading covers R&D for the prevention and elimination of all forms of pollution, as well as R&D oriented towards equipment and instruments of pollution measurement and analysis. When separable all R&D activities even when referring to a specific class have to be classified under this position. Environmental R&D is further classified in accordance with the 1993 NABS (Nomenclature for the Analysis and Comparison of Scientific Programmes and Budgets, Eurostat 1994). Excluded are R&D activities related to the management of natural resources.
9 - Other environmental protection activities	Other environmental protection activities refers to all environmental protection activities which take the form of general environmental administration and management activities or training or teaching activities specifically oriented towards environmental protection or which consist of public information, when they are not classified elsewhere in CEPA. It also includes activities leading to indivisible expenditure, as well as activities not elsewhere classified.

Environmental protection expenditure: data availability

Data on environmental protection expenditure in Europe are available by country, year and economic sector.

Data are published for the European Union as well as for each Member State separately. In addition, data for the candidate countries Turkey and Croatia and for the EFTA countries (Iceland, Norway and Switzerland) are provided, when available.

EU aggregates for EU-25, EU-27 and EU-15 are calculated by summing up the national figures. If no data are available for a certain country and year, estimations are made by Eurostat. These Eurostat estimates are not presented at national level.

Table 8: Countries and codes

Countries					
Belgium	BE	Malta	MT	United Kingdom	UK
Bulgaria	BG	Netherlands	NL	Cyprus	CY
Czech Republic	CZ	Austria	AT	Latvia	LV
Denmark	DK	Poland	PL	Lithuania	LT

Ireland	IE	Slovenia	SI	Switzerland	CH
Greece	GR	Slovakia	SK	Norway	NO
Spain	ES	Finland	FI	Croatia	HR
France	FR	Sweden	SE	Turkey	TR
Italy	IT				

Data are available from 1990 to 2009.

Data are available for six main environmental expenditure variables which can be regrouped as follows.

- Investment expenditure includes all outlays in a given year (purchases and own-account production) for machinery, equipment and land used for Environmental Protection (EP) purposes. EP Total investment is the sum of two categories:
 - End-of-pipe (pollution treatment) investments. These investments do not affect the production process itself, they serve to treat already generated pollution.
 - Investments in integrated technologies (pollution prevention investments). These are investments which lead to a modified or adapted production process and reduce the amount of pollution at the source.
- Internal current expenditure includes the use of energy, material, maintenance and own personnel for measures made by the sector to protect the environment. A large part of internal expenditure is related to operating environmental protection equipment. It also includes general administration, education, information, environmental management and certification, research and development expenditures.
- Other economic variables such as Receipts from by-products, Subsidies/Transfers, Fees/Purchases and Revenues.

Data are available by sectors: public sector, specialised producers (mainly NACE Rev. 1.1 section 90, partly 37 and 41), business and households. Business includes agriculture and forestry (NACE Rev. 1.1 A and B), industry

and other business activities. The latter comprise mainly NACE Rev. 1.1 sections 45-99 excluding 75 and 90 and most of 37.

Data for total industry excludes recycling activities (NACE Rev. 1.1 37) and regroups various NACE rev. 1.1 sections:

- Sections NACE C 10 – 14: Mining and quarrying
- Sections NACE D 15 – 36: Manufacturing, regrouping:
 - NACE 15 – 16: Manufacture of food products; beverages and tobacco
 - NACE 17 – 19: Manufacture of textiles, of leather and leather products
 - NACE 20: Manufacture of wood and wood products
 - NACE 21 – 22: Manufacture of pulp, paper; publishing and printing
 - NACE 23: Manufacture of coke, refined petroleum products and nuclear fuel
 - NACE 24 – 25: Manufacture of chemicals, rubber and plastic products
 - NACE 26: Manufacture of other non-metallic mineral products
 - NACE 27: Manufacture of basic metals
 - NACE 28 – 36: Other manufacturing
- Sections NACE E 40 – 41: Electricity, gas and water supply

Data are also published in NACE Rev. 2 for several countries which provided such information during the 2010 data collection exercise.

Data are available by environmental domain: air, waste, wastewater, soil, groundwater, noise, biodiversity and landscape, and other domains.

Further Information

All data presented in this publication are available from the Eurostat Eurobase database in the environment and energy section. Main economic indicators used are from National Accounts in the economy and finance section and Structural Business Statistics (SBS) from the industry, trade and services section. Population figures (on 1 January) are from the demographic section.

From the years 1990 to 1995, few countries filled in the questionnaire. Few data are thus available for a rigorous analysis (see Environmental Expenditure in Europe, 1990 – 1999, Eurostat, 2001 (<http://ec.europa.eu/eurostat/product?code=KS-39-01-320&mode=view>)).

Eurostat's Statistics in Focus 14/2002 and 10/2005 analyse the trends and the level of EPE in European countries in 1999 and between 1995 and 2002 (<http://ec.europa.eu/eurostat/product?code=KS-NQ-02-014&mode=view> and <http://ec.europa.eu/eurostat/product?code=KS-NQ-05-010&mode=view>).

Statistics in Focus 93/2008 analyses EPE by Industry between 1997 and 2004 (<http://ec.europa.eu/eurostat/product?code=KS-SF-08-093&mode=view>).

Statistics in Focus 31/2010 details environmental protection expenditure and revenues in the EU, EFTA and candidate countries between 2001 and 2006 (<http://ec.europa.eu/eurostat/product?code=KS-SF-10-031&mode=view>).

The publication “Environmental protection expenditure in accession countries, 1996 – 2000”, analyses EPE in new Members States (<http://ec.europa.eu/eurostat/product?code=KS-CM-02-001&mode=view>).

Information on the methodology can be found in the following manuals:

SERIEE - European system for the collection of economic information on the environment - 1994 version
(<http://ec.europa.eu/eurostat/product?code=KS-BE-02-002&mode=view>)

Environmental expenditure statistics: Industry data collection handbook (<http://ec.europa.eu/eurostat/product?code=KS-EC-05-002&mode=view>)

Environmental expenditure statistics, General Government and Specialised Producers: data collection handbook
(<http://ec.europa.eu/eurostat/product?code=KS-RA-07-012&mode=view>)

OECD/Eurostat Environment Protection Expenditure and Revenue Joint Questionnaire / SERIEE Environmental Protection Expenditure Account: Conversion guidelines (<http://ec.europa.eu/eurostat/product?code=KS-EC-05-001&mode=view>)

SERIEE - Environmental protection expenditure accounts - Compilation guide
(<http://ec.europa.eu/eurostat/product?code=KS-BE-02-001&mode=view>)

Country fact sheets

This part of the publication is devoted to an overview of environmental spending in the European countries.

For each country, the 'fact sheet' presents an overview of environmental protection expenditure data of the three main actors in environmental spending: the public sector, the public and private specialised producers and the industry.

The public sector groups together those units which carry out 'non-market' environmental protection activities for third parties i.e. activities for the 'community as a whole'. This group includes for example central, regional and local governments, authorities, communities and government agencies (mainly in NACE Rev. 1.1 75) which deal with general administration activities related to the environment.

Public and private specialised producers (thereafter simply specialised producers) groups together those units which produce *market* environmental protection services as principal or as a secondary activity. This group includes for example the units involved in waste and wastewater management classified under NACE Rev. 1.1 90 'Sewage and refuse disposal, sanitation and similar activities'.

It is important to make a clear distinction between public sector and specialised producers. All NACE Rev. 1.1 90 activities are accounted for in the specialised producers group. This includes the public sector related parts such as publicly owned enterprises and waste and wastewater departments in large municipalities (which can be separately identified and are thus recorded under NACE Rev. 1.1 90 in the business register). Only when the existing data sources make this kind of separation impossible, the waste and wastewater departments could be recorded under public sector.

Data for environmental protection expenditure of agriculture and forestry activities, construction and most of the services are not available for most of the countries. Therefore this publication focuses on environmental protection of mining and quarrying, manufacturing and electricity, gas and water supply and distribution industries (NACE Rev. 1.1 C, D and E, thereafter simply 'industry'). Nevertheless available data on business activities other than industry can be accessed through the Eurostat database (see [env_ac_exp1](#) and [env_ac_exp1r2](#)).

The three sectors making up total industry are analysed separately and the manufacturing sector is examined in detail.

Since environmental protection expenditure depends on the structure of industrial activities, on the technologies and the management of each industrial sector and on environmental regulations that apply to industries are targeted to, observing different patterns for the same industrial subsectors in different countries should not surprise.

As few countries report data on households' environmental protection expenditure, this publication does not publish the available data. Available data on households can be accessed through the Eurostat database (see [env_ac_exp1](#) and [env_ac_exp1r2](#)).

The latest available year as well as the time series depends on the availability of data which can differ among countries.

The country fact sheets present first for the public sector, the specialised producers and the industry a table reporting data on EPE in million euros, as a percentage of GDP and in euro per capita, as well as the main variables collected by the JQ for the latest available year. Whenever possible also the aggregates Expenditure I and II are presented.

Then for each country some detailed information (depending on the availability of data) on environmental expenditure is presented by means of graphics. These graphics are presented in the following paragraphs where a short explanation and an explanation for each graph are given. For the industry sector also two graphics are reported comparing EPE figures and related physical data. The number refers to the graphic number in each country fact sheet. The source code of the data used for the graphic is also mentioned.

Table 9: Public sector

<i>Graph</i>	1. Public sector EPE, million euro (time series)
<i>Content</i>	This graph represents the evolution over time of public sector expenditure in environmental protection.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	2. Public sector EPE, % of final consumption expenditure of general government (time series)
<i>Content</i>	This graph represents the evolution over time of public sector EPE expressed as a share of general government final consumption expenditure. Government final consumption expenditure consists of expenditure, including imputed expenditure, incurred by general government on both individual consumption goods and services and collective consumption services. Indeed environmental protection is only one of the many objectives pursued by any government.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2 , nama_nace31_c)
<i>Graph</i>	3. Public sector EP investments, current expenditures and subsidies (given), million euro (time series)
<i>Content</i>	Public sector's EPE is the sum of investments, current expenditures and subsidies (paid to other sectors). This graph represents the three components of public sector EPE, expressed in m EUR.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	4. Public sector EP investments, current expenditures and subsidies (given), share of public sector EPE
<i>Content</i>	Public sector investments, current expenditures and subsidies (paid to other sectors) are shown as percentage of total public sector EPE.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	5. Public sector EPE by environmental domain, share of public sector EPE, (latest available year)
<i>Content</i>	This graph shows the environmental spending of the public sector by environmental domain in the latest available year. Whenever figures in graphics do not add up to 100%, this is due to rounding.
<i>Source:</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	6. Public sector EPE by environmental domain, share of public sector EPE, (time series)
<i>Content</i>	This graph represents the evolution of public sector spending for environmental protection in the different environmental domains. Changes in the environmental priorities of the government can be reflected in the objectives (i.e. environmental domains) of environmental spending.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)

Table 10: Specialised producers

<i>Graph</i>	7. Specialised producers' EPE, million euro, (time series)
<i>Content</i>	This graph represents the evolution over time of specialised producers' EPE.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	8. Specialised producers' EPE, % of GFCF plus compensation of employees and intermediate consumption of business activities (time series)
<i>Content</i>	Specialised producers' EPE is the sum of investments, and current expenditures. Investments correspond to Gross Fixed Capital Formation (GFCF). Current expenditure corresponds to intermediate consumption plus compensation of employees. Thus, specialised producers' EPE is equal to the sum of GFCF plus compensation of employees and intermediate consumption. In this graph specialised producers' EPE is compared to the sum of GFCF plus compensation of employees and intermediate consumption of all business activities in order to give an idea of the importance of the specialised producers of environmental protection services among all the economic activities of a country.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2 , nama_nace31_c)
<i>Graph</i>	9. Specialised producers' EP investments and current expenditures, million euro, (time series)
<i>Content</i>	This graph represents the evolution over time of the two main components of specialised producers' EPE: investments and current expenditures.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	10. Specialised producers' EP investments and current expenditures, share of specialised producers' EPE (time series)
<i>Content</i>	This graph represents the evolution over time of the two main components of specialised producers' EPE: investments and current expenditures expressed as a percentage of EPE.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	11. Specialised producers' EPE by environmental domain, share of specialised producers' EPE, (latest available year)
<i>Content</i>	This graph represents the spending of specialised producers in the different environmental domains in the latest available year. As most of the specialised producers are active in the field of waste and wastewater management, specialised producers' EPE is mostly focused in these environmental domains. Whenever figures in graphics do not add up to 100%, this is due to rounding.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	12. Specialised producers' EPE by environmental domain, share of specialised producers' EPE, (time series),
<i>Content</i>	This graph represents the evolution of specialised producers' activities in the different environmental domains over time.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	13. Specialised producers' EP revenues (receipts from by-products, revenues from environmental protection services and subsidies received), million euro
<i>Content</i>	Specialised producers can count on mainly three different types of revenues: receipts from by-products, revenues from environmental protection services (output which is sold on the market) and subsidies received by the government. This graph shows the evolution of the amount of these items over time.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)

<i>Graph</i>	14. Specialised producers' EP revenues (receipts from by-products, revenues from environmental protection services and subsidies received), share of specialised producers' EP revenues
<i>Content</i>	This graph represents the evolution of receipts from by-products, revenues from environmental protection services and subsidies received as a share of specialised producers' EP revenues.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)

Table 11: Industry

<i>Graph</i>	15. Industry's EPE, million euro
<i>Content</i>	This graph represents the evolution of industrial environmental spending.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	16. Industry's EP investments and current expenditures, million euro
<i>Content</i>	Industry's EPE is made of investments and current expenditures. This graph shows the evolution of the two components of EPE over time.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	17. Industry's current environmental expenditure: in-house expenditure and fees and purchases, share of environmental current expenditure
<i>Content</i>	Environmental current expenditure is made of in-house expenditure, which represent the environmental protection services carried out by the industry itself and fees and purchases, that is the money spent for buying environmental services from third parties (i.e. mainly specialised producers). This graph shows the evolution of the two components of EP current expenditure over time.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	18. Industry's environmental investments: pollution treatment and pollution prevention investments, share of environmental protection investments
<i>Content</i>	EP investments are the sum of pollution treatment and pollution prevention investments. Pollution treatment investments do not affect the production process itself, they serve to treat already generated pollution. Investments in integrated technologies (pollution prevention investments) are investments which lead to a modified or adapted production process and reduce the amount of pollution at the source.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	19. Industry's EP investments, share of industry's GFCF
<i>Content</i>	This graph shows which part of total investments of the industry is for environmental protection over time.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2 , nama_nace31_c)
<i>Graph</i>	20. Industry's EP current expenditure, share of industry's compensation of employees plus intermediate consumption
<i>Content</i>	This graph shows which part of total current expenditures of the industry is for environmental protection over time.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2 , nama_nace31_c)

<i>Graph</i>	21. Industry's EPE by environmental domain, share of EPE (latest available year)
<i>Content</i>	This graph represents the distribution of industry's environmental spending by environmental domain in the latest available year. Whenever figures in graphics do not round up to 100%, this is due to roundings
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	22. Industry's EPE by environmental domain, share of EPE (time series)
<i>Content</i>	This graph represents the evolution of industry's environmental spending by environmental domain.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	23. Industry's EPE by sector, million euro
<i>Content</i>	This graph represents the evolution of environmental spending in the three sectors making up the industry: mining and quarrying (NACE C), manufacturing (NACE rev.1.1 D) and electricity, gas and water supply (NACE rev.1.1 E).
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	24. Industry's EPE by sector, share of total industry's EPE
<i>Content</i>	This graph represents the evolution of the part of environmental spending of each industrial sector over time.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	25. Industry's investments by sector, share of GFCF
<i>Content</i>	This graph represents the evolution of the share of environmental investments in total investments for the three main industrial sectors over time.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2 , nama_nace31_c)
<i>Graph</i>	26. Industry's current expenditures by sector, share of compensation of employees and intermediate consumption
<i>Content</i>	This graph represents the evolution of the share of environmental current expenditure in total current expenditure for the three main industrial sectors over time.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2 , nama_nace31_c)
<i>Graph</i>	27. EPE in manufacturing subsectors, by environmental domain, share in total EPE of each manufacturing subsector (latest available year)
<i>Content</i>	This graphs detail environmental protection expenditure in the sub-sectors making up the manufacturing sector. Whenever figures in graphics do not add up to 100%, this is due to rounding
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)
<i>Graph</i>	28. EPE in manufacturing subsectors, share in total manufacturing EPE (latest available year)
<i>Content</i>	This graph represents the environmental domain where manufacturing subsectors are spending for environmental protection, as a percentage of their total environmental spending. Whenever figures in graphics do not add up to 100%, this is due to rounding.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2)

<i>Graph</i>	29. Industry's EPE for waste management and industry's waste generation (latest available year)
<i>Content</i>	This graph compares the generation of waste and the money spent for waste management for industrial sectors and manufacturing subsectors. An indicator (euro spent per tonne of waste) is calculated. Figures can vary a lot among the industrial sectors and subsectors as their type of waste and thus their mode of treatment (for example hazardous wastes are more expensive to be treated) can be very different. As waste statistics are already published by NACE Rev.2, while EPE statistics are still by NACE Rev. 1.1 for most of countries, for these countries a) expenditure data for electricity, gas and water supply include also data for water supply industry which is not included for the waste data and b) expenditure of the manufacturing sector does not include the recycling industry (DN37), which is included for the waste data.
<i>Source</i>	Eurostat (online data code: env_ac_exp1 , env_ac_exp1r2 , env_wasgen)
<i>Graph</i>	30. Industry's EPE for air protection and industry's GHG emissions (latest available year)
<i>Content</i>	This graph compares the emissions of GHG and the money spent for air protection for industrial sectors and manufacturing subsectors. An indicator (euro spent per tonne of GHG emitted) is calculated. GHG are the sum of carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O) expressed in CO₂ equivalents using the global warming potential weighting factors for 100 years. Of course air protection expenditures are also aimed at reducing the level of other air emissions, for example acidifying emissions. This explains huge differences among sectors, as in some economic sectors emitting relatively small quantities of GHGs, the expenditure for air protection can be very high because it is related to the abatement of specific pollutants (dust, NO_x, etc).

(EUR million)

Source: Eurostat (online data code: [env_ac_exp1](#))

Figure TR25 : Industry's investments by sector
(% of GFCF)

* No GFCF data available.

Figure TR27 : EPE in manufacturing subsectors by environmental domain, 2008
(% of manufacturing subsectors' EPE)

Source: Eurostat (online data code: [env_ac_exp1](#))

DA: food products, tobacco and beverages

DB_DC: textile and leather products

Figure TR24 : Industry's EPE by sector, 2007 and 2008
(% of industry's EPE)

Source: Eurostat (online data code: [env_ac_exp1](#))

Figure TR26 : Industry's current expenditures by sector
(% of compensation of employees plus intermediate consumption)

* No data on compensation of employees plus intermediate consumption available.

Figure TR28 : EPE in manufacturing subsectors, 2008
(% of total manufacturing's EPE)

Source: Eurostat (online data code: [env_ac_exp1](#))

DG_DH: chemicals, chemical products, rubber and plastic products

DI: other non metallic products

DD: wood products
 DE: pulp, paper products, publishing and printing
 DF: coke, refined petroleum and nuclear fuel

Figure TR29 : Industry's EPE for waste management and industry's waste generation, 2008 (EUR/tonne)

Source: Eurostat (online data code: [env_ac_exp1](#), [env_wasgen](#))

C: Mining and quarrying
 D: Manufacturing
 DA: food products, tobacco and beverages
 DB_DC: textile and leather products
 DD: wood products
 DE: pulp, paper products, publishing and printing

DJ27: basic metals
 DJ28_DN36: metal products, machinery and equipment

Figure TR30 : Industry's EPE for air protection and industry's GHG emissions, 2006 (EUR/tonne of CO₂ equivalent)

Source: Eurostat (online data code: [env_ac_exp1](#), [env_ac_ainacehh](#))

DF: coke, refined petroleum and nuclear fuel
 DG_DH: chemicals, chemical products, rubber and plastic products
 DI: other non metallic products
 DJ27: basic metals
 DJ28_DN36: metal products, machinery and equipment
 E: Electricity, gas and water supply

European Commission

Environmental protection expenditure in Europe — Data 1995-2009

Luxembourg: Publications Office of the European Union

2011 — 246 pp. — 21 x 29.7 cm

Theme: Environment and energy

Collection: Statistical books

ISBN 978-92-79-20789-1

doi:10.2785/15925

Cat. No KS-30-11-214-EN-N

HOW TO OBTAIN EU PUBLICATIONS

Free publications:

- via EU Bookshop (<http://bookshop.europa.eu>);
- at the European Union's representations or delegations. You can obtain their contact details on the Internet (<http://ec.europa.eu>) or by sending a fax to +352 2929-42758.

Priced publications:

- via EU Bookshop (<http://bookshop.europa.eu>).

Priced subscriptions (e.g. annual series of the *Official Journal of the European Union* and reports of cases before the Court of Justice of the European Union):

- via one of the sales agents of the Publications Office of the European Union (http://publications.europa.eu/others/agents/index_en.htm)
