

North River – Ward Creek Mitigation Bank *Carteret County, NC*

North River is the 360 acre compensatory mitigation portion of a much larger restoration project organized by Restoration Systems, Tanglewood Farms, and the North Carolina Coastal Federation. This ground breaking project has already led to the permanent protection of 1900 acres of estuary and coastal marsh by the N.C. Clean Water Trust Fund. In 2003, Restoration Systems will begin construction of a mitigation bank within the larger restoration and protection area. The bank will provide mitigation credit for unavoidable wetland impacts in White Oak River basin and parts of the Pamlico Sound.

North River Project Area

Restoration Systems provides mitigation credit and turn-key mitigation for wetland, stream and stream buffer impacts in coastal and piedmont North Carolina. We are a qualified provider of mitigation credit to the North Carolina Department of Transportation, with two “full delivery”

projects contracted to NCDOT. We also have banking instruments and regional mitigation projects under development for credit needs statewide.

Restoration Systems welcomes inquiries regarding these projects or mitigation needs elsewhere in North Carolina. With our partners Ecoscience Corporation, and Backwater Construction, we provide all the necessary services to permit your projects; including identification, acquisition, planning, implementation and long term monitoring.
