

**Questionnaire for the expression of interest for participating in a collaborative partnership on sustainable wildlife management**

1. What are your expectations for a collaborative partnership on sustainable wildlife management (with a focus on supporting developing countries in implementing the recommendations of the CBD Liaison Group on Bushmeat)?

Wildlife management in UNESCO's biosphere reserves and world heritages. I have experience in deer management in Shiretoko and Yakushima World Heritages, Japan. I also tackle bear management in Shiretoko. We decided to control deer populations, rather than no action.

2. What are key experiences of your organization in sustainable wildlife management at global, regional and national level?

Balance between sustainable use and conservation as natural resource for deer. We need to make bears feel threats from human and vice versa.

3. Which organizational format would you suggest for a possible partnership on sustainable wildlife management? (Please cite examples of other international partnerships, if possible).

UNESCO's MAB ICC, World Biosphere Reserve Network

4. Which resources could you contribute to the partnership, if any?

I am member of Scientific Council of Shiretoko WH, Yakushima WH, and Japanese National Commission for UNESCO's Man and the Biosphere Programme.
